1. You're about to turn right. What should you do just before you turn?

A. Give the correct signal

B. Get in position ready for the turn

C. Select the correct gear

D. Take a lifesaver glance over your shoulder

2. What's the ‘lifesaver’ when riding a motorcycle?

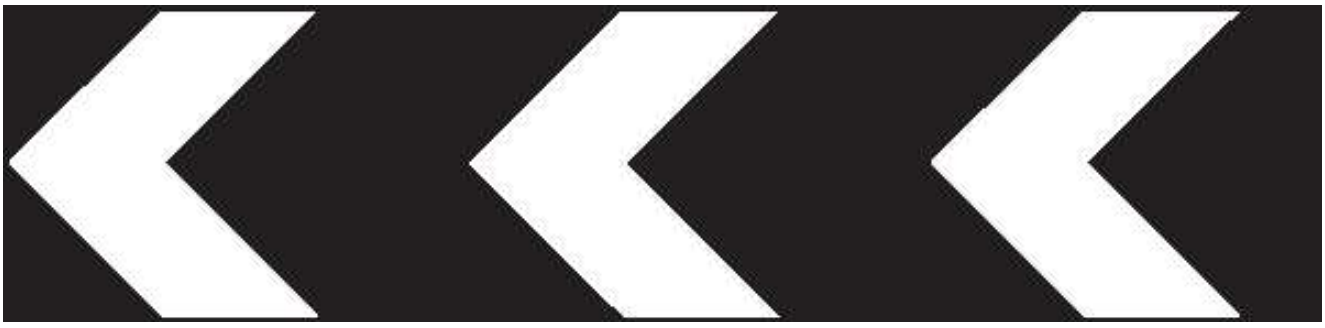

A. A certificate every motorcyclist must have

B. A final rearward glance before changing direction

C. A part of the motorcycle tool kit

D. A mirror fitted to check blind spots

3. What should you do when you see this road sign ahead?

A. Slow down before the bend

B. Continue at the same speed

C. Slow down as you go around the bend

D. Slow down as you come out of the bend

4. What should you do if you're riding at night and are dazzled by the headlights of an oncoming car?

A. Slow down or stop

B. Close your eyes

C. Flash your headlights

D. Turn your head away

5. When riding some motorcycles, your shoulders and arms can obstruct your view in the mirrors. What can you do to overcome this difficulty?

A. Indicate earlier than normal

B. Fit smaller mirrors

C. Extend the mirror arms

D. Brake earlier than normal

6. You're riding a motorcycle on the road. What should you do before using your mobile phone?

A. Turn on the speaker phone function

B. Slow down to 20 mph

C. Increase the separation distance to 4 seconds

D. Stop in a safe place

7. You’re riding at night. You have your headlights on main beam. When should you dip your headlights if another vehicle overtakes you?

A. As soon as the other vehicle passes you

B. After the other vehicle pulls in front of you

C. As soon as the other vehicle moves out to overtake

D. When the other vehicle signals to overtake

8. What should you do to move off safely from a parked position?

A. Signal if other drivers will need to slow down

B. Leave your motorcycle on its stand until it's safe to move off

C. Give an arm signal as well as using your indicators

D. Look over your shoulder just before you move off

9. What will happen if you become very cold while you're riding your motorcycle?

A. You'll be more alert

B. You'll lose concentration

C. You'll react more quickly

D. You'll be more relaxed

10. What should you do if you're riding at night and are dazzled by the headlights of an approaching vehicle?

A. Switch off your headlights

B. Flash your headlights

C. Slow down and stop if necessary

D. Switch to main beam

11. When should you check your blind spots?

A. Before moving off

B. Before giving a signal

C. Before changing gear

D. Before slowing down

12. Why can it be helpful to have mirrors on each side of your motorcycle?

A. To make your motorcycle appear larger to other drivers

B. To give you the best view of the road behind

C. To give protection when riding in poor weather

D. To judge the gap when filtering in traffic

13. What does the term ‘lifesaver’ mean?

A. A reflective jacket

B. An approved safety helmet

C. The two-second rule

D. A rearward glance just before manoeuvring

14. You're about to emerge from a junction. Your pillion passenger tells you it's clear. When should you rely on their judgement?

A. When the roads are very busy

B. Never; you should always look for yourself

C. Only when they're a qualified rider

D. When the roads are very quiet

15. You're riding your motorcycle on an urban road. What must you do before stopping on the left?

A. Put both feet down

B. Move into neutral

C. Use your mirrors

D. Select first gear

16. Why should you check over your shoulder before you change lanes in busy, slow-moving traffic?

A. To avoid having to give a signal

B. So your balance won’t be affected

C. So traffic ahead will make room for you

D. Mirrors don't cover blind spots

17. You've been waiting for some time to make a right turn into a side road. What should you do just before you start turning?

A. Flash your headlights

B. Make a lifesaver check

C. Move close to the kerb

D. Select a higher gear

18. You're riding a motorcycle that's towing a trailer. What should you do before turning right onto a dual carriageway?

A. Check that there's enough room for vehicles behind you

B. Stop, and then select a very low gear

C. Position in the left gutter of the side road

D. Assess the width of the central reservation

19. What should you do before riding a motorcycle you've never ridden before?

A. Ask someone to ride with you for the first time

B. Push the bike around to get used to the brakes

C. Wear thinner gloves so the switches can be operated more easily

D. Make sure you know where all the controls and switches are

20. You're turning right at a large roundabout. What should you do before you cross a lane to reach your exit?

A. Take a lifesaver glance over your right shoulder

B. Put on your right indicator

C. Take a lifesaver glance over your left shoulder

D. Cancel the left indicator

21. You're turning right on a multi-lane roundabout. When should you take a lifesaver glance over your left shoulder?

A. After moving into the left-hand lane

B. After leaving the roundabout

C. Before signalling to the right

D. Before moving into the left-hand lane

22. What should you do if you see an incident on the other side of the motorway?

A. Concentrate on what's happening ahead

B. Leave the motorway at the next exit

C. Stop and cross the carriageway to help

D. Place a warning triangle in the road

23. What should you do before making a U-turn?

A. Select a higher gear than normal

B. Give an arm signal as well as using your indicators

C. Check road markings to see that U-turns are permitted

D. Look over your shoulder for a final check

24. What should you do as you approach this bridge?

A. Change gear

B. Move to the right

C. Slow down

D. Keep to 30 mph

25. Where should you avoid overtaking?

A. On a dual carriageway

B. Just after a bend

C. In a one-way street

D. Approaching a dip in the road

26. What does this curved arrow road marking mean?

A. Overtaking traffic should move back to the left

B. Heavy vehicles should take the next road on the left to avoid a weight limit

C. The road ahead bends to the left

D. The road ahead has a camber to the left

27. What should you do if your mobile phone rings while you're driving or riding?

A. Leave it until you have stopped in a safe place

B. Pull up at the nearest kerb

C. Answer it immediately

D. Stop immediately

28. Why are these yellow lines painted across the road?

A. To help you choose the correct lane

B. To tell you the distance to the roundabout

C. To make you aware of your speed

D. To help you keep the correct separation distance

29. What should you do when you're approaching traffic lights that have been green for some time?

A. Brake hard

B. Accelerate hard

C. Maintain your speed

D. Be ready to stop

30. What should you do before slowing down or stopping your vehicle?

A. Select a higher gear

B. Sound the horn

C. Use the mirrors

D. Flash the headlights

31. You're following a large vehicle. Why should you stay a safe distance behind it?

A. You'll give the driver a chance to see you in their mirrors

B. You'll be able to corner more quickly

C. You'll help the large vehicle to stop more easily

D. You'll keep out of the wind better

32. Why should you use your mirrors when you see a hazard ahead?

A. Because you'll need to brake sharply and stop

B. To check what's happening on the road ahead

C. Because you'll need to accelerate out of danger

D. To assess how your actions will affect the traffic behind

33. You're waiting to turn right at the end of a road. What should you do if your view is obstructed by parked vehicles?

A. Turn your vehicle around immediately and find another junction to use

B. Stop and then move forward slowly and carefully for a clear view

C. Move quickly to where you can see so you only block traffic from one direction

D. Wait for a pedestrian to let you know when it's safe for you to emerge

Answers

1. D - Take a lifesaver glance over your shoulder

When you're turning right, plan your approach to the junction. Signal and select the correct gear in good time. Just before you turn, take a lifesaver glance for a final check behind and to the side of you.

2. B - A final rearward glance before changing direction

This action makes you aware of what’s happening behind and alongside you. The lifesaver glance should be timed so that you still have time to react if it isn’t safe to perform the manoeuvre.

3. A - Slow down before the bend

Always look for any advance warning of hazards, such as road signs and hazard warning lines. Use this information to plan ahead and to help you avoid the need for late, harsh braking. Your motorcycle should be upright and moving in a straight line when you brake. This will help you keep maximum control when dealing with the hazard.

4. A - Slow down or stop

If you're dazzled by the headlights of an approaching vehicle, slow down or stop until your eyes have adjusted. A dirty or scratched visor could make the dazzle worse and further impair your vision.

5. C - Extend the mirror arms

It’s essential that you have a clear view all around. Adjust your mirrors to give you the best view of the road behind. If your body obscures the view, try fitting mirrors with longer stems.

6. D - Stop in a safe place

It’s important that you’re in full control at all times. Even using a hands-free phone kit can distract your attention from the road. If you need to use a mobile phone, stop in a safe place before making the call.

7. A - As soon as the other vehicle passes you

At night, you should dip your headlights to avoid dazzling oncoming drivers or those ahead of you. If you’re being overtaken, dip your headlights as the other vehicle comes past. When you switch to dipped beam, your view of the road ahead will be reduced, so look ahead for hazards on your side of the road before you do so.

8. D - Look over your shoulder just before you move off

Just before you move off from the side of the road, you should take a look over your shoulder to check your blind spot. This will help you to see any road user who isn't visible in your mirrors.

9. B - You'll lose concentration

It can be difficult to keep warm when riding a motorcycle. It's well worth buying good-quality motorcycle clothing, which will help to keep you warm and is essential for your safety. If you become very cold while riding, you'll find it difficult to concentrate on the road.

10. C - Slow down and stop if necessary

If your view of the road ahead is restricted because you’re being dazzled by approaching headlights, slow down and, if you need to, find a safe place to stop until your vision is restored.

11. A - Before moving off

Your blind spots are the areas behind and to either side of you that aren't covered by your mirrors. You should always check the relevant side when there's a risk of a hazard that isn't visible in your mirrors.

12. B - To give you the best view of the road behind

When riding on the road, you need to know as much about following traffic as you can. A mirror fitted on each side of your motorcycle will help give you the best view of the road behind.

13. D - A rearward glance just before manoeuvring

There are areas behind and to either side of you that aren't visible in your mirrors. These are known as blind spots. Just before turning or changing direction, you should look around to check that there's nothing hazardous in the blind spot. This check is known as a 'lifesaver'.

14. B - Never; you should always look for yourself

Your passenger may be inexperienced in judging traffic situations, may have a poor view or may not have seen a potential hazard. You're responsible for your own safety and that of your passenger. Always make your own checks to be sure it's safe to pull out.

15. C - Use your mirrors

Check your mirrors before slowing down or stopping, as there could be vehicles close behind you. You should react to what you see, for example it may affect the timing of your signal or how quickly you stop.

16. D - Mirrors don't cover blind spots

Before changing lanes, make sure there’s a safe gap to move into. Looking over your shoulder allows you to check the area not covered by your mirrors, where a vehicle could be hidden from view. It also warns following drivers that you want to change lanes.

17. B - Make a lifesaver check

Remember your lifesaver glance before you start to turn. If you’ve been waiting for some time and a queue has built up behind you, a vehicle further back may try to overtake. In this situation, it's especially important to look out for other motorcycles, which may be approaching at speed.

18. D - Assess the width of the central reservation

Before emerging right onto a dual carriageway, make sure that the central reservation is wide enough to protect both your motorcycle and its trailer. If it isn't, you should treat it as one road and check that it’s clear in both directions before pulling out.

19. D - Make sure you know where all the controls and switches are

While control layouts are generally similar, different makes and models have subtle differences in the position and operation of the switches. Before you ride any motorcycle, make sure you’re familiar with the layout of all the controls and switches.

20. C - Take a lifesaver glance over your left shoulder

On busy roundabouts, traffic may be moving very quickly and changing lanes suddenly. You need to be aware of what's happening all around you. Before crossing lanes to the left, make sure you take a lifesaver glance to the left. This gives you time to react if it isn't safe to make the manoeuvre.

21. D - Before moving into the left-hand lane

The 'lifesaver' is essential to motorcyclists and does exactly what it says: it could save your life. Its purpose is to check the blind spot that isn't covered by your mirrors. Learn and understand how and when you should use it.

22. A - Concentrate on what's happening ahead

Always concentrate on the road ahead. Try not to be distracted by an incident on the other side of the road. Many motorway collisions occur due to traffic slowing down because drivers are looking at something on the other side of the road.

23. D - Look over your shoulder for a final check

If you have to make a U-turn, slow down and ensure that the road is clear in both directions. Make sure that the road is wide enough for you to carry out the manoeuvre safely. Use your mirrors and look round to check it's safe before turning across the road.

24. C - Slow down

You should slow down and be cautious. Hump bridges are often narrow and there may not be enough room for you to pass an oncoming vehicle at this point. Also, there's no footpath, so be aware of pedestrians in the road.

25. D - Approaching a dip in the road

Oncoming vehicles or other hazards can be hidden from view by dips in the road. If you can’t see into the dip, wait until you have a clear view and can see that it's safe before starting to overtake.

26. A - Overtaking traffic should move back to the left

In this picture, the road marking shows that overtaking drivers or riders need to return to the left. These markings show the direction drivers must pass hatch markings or solid double white lines. They're also used to show the route that high vehicles should take under a low arched bridge.

27. A - Leave it until you have stopped in a safe place

It’s illegal to use a hand-held mobile or similar device when driving or riding, except in a genuine emergency. The safest option is to switch off your mobile phone before you set off, and use a message service. If you've forgotten to switch your phone off and it rings, you should leave it. When you've stopped in a safe place, you can see who called and return the call if necessary.

28. C - To make you aware of your speed

These lines are often found on the approach to a roundabout or a dangerous junction. They give you extra warning to adjust your speed. Look well ahead and do this in good time.

29. D - Be ready to stop

The longer traffic lights have been green, the sooner they'll change. Allow for this as you approach traffic lights that you know have been green for a while. They're likely to change soon, so you should be prepared to stop.

30. C - Use the mirrors

Before slowing down or stopping, check the mirrors to see what's happening behind you. Also assess what's ahead and make sure you give the correct signal if it will help other road users.

31. A - You'll give the driver a chance to see you in their mirrors

If you're following a large vehicle but are so close to it that you can't see its exterior mirrors, the driver won't be able to see you. Keeping well back will also allow you to see the road ahead by looking past the large vehicle.

32. D - To assess how your actions will affect the traffic behind

You should be constantly scanning the road for clues about what's going to happen next. Check your mirrors regularly, particularly as soon as you spot a hazard. What's happening behind may affect how you respond to hazards ahead.

33. B - Stop and then move forward slowly and carefully for a clear view

At junctions, your view is often restricted by buildings, trees or parked cars. You need to be able to see in order to judge a safe gap. Edge forward slowly and keep looking all the time. Don’t cause other road users to change speed or direction as you emerge.
