1. You're riding towards a zebra crossing. What should you do if pedestrians are waiting to cross?

A. Give way to the elderly and infirm only

B. Wave at them to cross the road

C. Use your headlights to signal them to cross

D. Slow down and prepare to stop

2. You're following a large vehicle that's travelling at 40 mph. Where should you position your motorcycle?

A. Close behind the vehicle, to make it easier to overtake

B. Well back, so that you can see past the vehicle

C. Close to the vehicle, to keep out of the wind

D. To the left of the road, to make it easier to be seen

3. What should you do when you're approaching these horse riders?

A. Continue at your normal speed

B. Flash your headlights to warn them

C. Slow down and be ready to stop

D. Change down the gears quickly

4. You're riding a motorcycle that has an engine of less than 50 cc. What should you do if you see a queue of traffic building up behind?

A. Keep well out to stop vehicles overtaking dangerously

B. Give a left signal when it's safe for vehicles to overtake you

C. Pull in when you can to let faster vehicles behind you overtake

D. Wave vehicles behind you to pass if you think they can overtake

5. You’re riding a motorcycle on a single carriageway road. What should your road position allow?

A. Other vehicles to pass easily on your left

B. Drivers at junctions ahead to see you approaching

C. Faster traffic to overtake you easily

D. Pedestrians to hear you approaching

6. Why are young motorcyclists more likely to be involved in crashes?

A. Because they ride in the middle of lanes

B. Because they ride in groups

C. Because they're inexperienced

D. Because they're too cautious at junctions

7. What must you do when the amber light is flashing at a pelican crossing?

A. Give way to pedestrians waiting to cross

B. Give way to pedestrians already on the crossing

C. Stop and wait for the green light

D. Stop and wait for the red light

8. Why should you never wave people across at pedestrian crossings?

A. It's safer for you to carry on

B. They may not be ready to cross

C. They may not be looking

D. Another vehicle may be coming

9. Why is it dangerous to travel too close to the vehicle ahead?

A. Your engine will overheat

B. Your sat nav will be confused

C. Your view of the road ahead will be restricted

D. Your mirrors will need adjusting

10. What will happen if you follow this vehicle too closely?

A. Your fuel consumption will be increased

B. Your view ahead will be reduced

C. Your engine will overheat

D. Your brakes will overheat

11. What's the minimum time gap you should leave when following a vehicle on a wet road?

A. Two seconds

B. Four seconds

C. Three seconds

D. One second

12. You're being overtaken by a long, heavily laden lorry. What should you do if it's taking a long time for it to overtake?

A. Slow down

B. Change direction

C. Hold your speed

D. Speed up

13. Which vehicle will use a blue flashing beacon?

A. Bomb disposal

B. Breakdown recovery

C. Snow plough

D. Motorway maintenance

14. What should you do if you're being followed by an ambulance showing flashing blue lights?

A. Pull over as soon as it's safe to do so

B. Accelerate hard to get away from it

C. Maintain your speed and course

D. Brake harshly and stop well out into the road

15. What type of emergency vehicle is fitted with a green flashing beacon?

A. Fire engine

B. Doctor's car

C. Ambulance

D. Road gritter

16. Who should obey diamond-shaped traffic signs?

A. Bus drivers

B. Taxi drivers

C. Lorry drivers

D. Tram drivers

17. On a road where trams operate, which vehicles will be most at risk from the tram rails?

A. Cycles

B. Lorries

C. Buses

D. Cars

18. When should you use your vehicle's horn?

A. To allow you right of way

B. To signal your annoyance

C. To greet other road users

D. To alert others to your presence

19. You're in a one-way street and want to turn right. Where should you position your vehicle when there are two lanes?

A. In the left-hand lane

B. Just left of the centre line

C. In either lane, depending on the traffic

D. In the right-hand lane

20. You wish to turn right ahead. Why should you take up the correct position in good time?

A. To give a better view into the road that you're joining

B. To allow drivers to pass you on the right

C. To help other road users know what you intend to do

D. To allow other drivers to pull out in front of you

21. Which type of crossing allows cyclists to ride across with pedestrians?

A. Toucan

B. Zebra

C. Pelican

D. Puffin

22. You're travelling at the legal speed limit. What should you do if the vehicle behind approaches quickly, flashing its headlights?

A. Accelerate to make a gap behind you

B. Allow the vehicle to overtake

C. Maintain your speed to prevent the vehicle from overtaking

D. Touch the brakes sharply to show your brake lights

23. When should you flash your headlights at other road users?

A. When showing that you're about to turn

B. When letting them know that you're there

C. When telling them that you have right of way

D. When showing that you're giving way

24. You're approaching an unmarked crossroads. How should you deal with the junction?

A. Accelerate and keep to the middle

B. Slow down and look both ways

C. Accelerate and look to the left

D. Slow down and keep to the right

25. The conditions are good and dry. When should you use the 'two-second rule'?

A. When checking your gap from the vehicle in front

B. When traffic lights change to green

C. Before using the 'Mirrors - Signal - Manoeuvre' routine

D. Before restarting the engine after it has stalled

26. Which colour follows the green signal at a puffin crossing?

A. Flashing amber

B. Flashing green

C. Steady amber

D. Steady red

27. You're in a line of traffic. What action should you take if the driver behind is following very closely?

A. Move over to a position just left of the centre line of the road

B. Slow down, gradually increasing the gap between you and the vehicle in front

C. Signal left and wave the driver behind to come past

D. Ignore the driver behind and continue to travel within the speed limit

28. You’re travelling along a single-track road. There’s a passing place on your right. What should you do if you see a vehicle coming towards you?

A. Continue along the single-track road

B. Wait opposite the passing place

C. Move over onto the verge

D. Stop in the passing place

Answers

1. D - Slow down and prepare to stop

As you approach a zebra crossing, look out for people waiting to cross and be ready to stop. Some pedestrians may be a little slow to understand that it's safe to cross, so give them time. Be patient and don't rev your engine or surge forward before the crossing is clear.

2. B - Well back, so that you can see past the vehicle

You need to be able to see well down the road and be ready for any hazards. Staying too close to the vehicle will reduce your view of the road ahead and the driver of the vehicle in front may not be able to see you either. Without a safe separation gap, you don't have the time and space you need to react to any hazards.

3. C - Slow down and be ready to stop

Animals are easily frightened by moving motor vehicles. If you’re approaching horses, keep your speed down and watch to see if the rider has any difficulty keeping control. Always be ready to stop if necessary. When it's safe to pass, give them plenty of room.

4. C - Pull in when you can to let faster vehicles behind you overtake

Try not to hold up a queue of traffic. This might lead to other road users becoming impatient and attempting dangerous manoeuvres. If you're riding a slow-moving scooter or small motorcycle and a queue of traffic has built up behind you, look for a safe place to pull in so they can pass safely.

5. B - Drivers at junctions ahead to see you approaching

Aim to ride in the middle of your lane. Avoid riding in the gutter or in the centre of the road, where you might * obstruct overtaking traffic * put yourself in danger from oncoming traffic * encourage other traffic to overtake you on the left.

6. C - Because they're inexperienced

Overconfidence, lack of experience and poor judgement can cause a motorcyclist to make poor decisions, which can lead to a collision. It's just as important to make sure you have the right attitude and self-awareness as a rider as it is to develop skilful riding techniques.

7. B - Give way to pedestrians already on the crossing

Pelican crossings are signal-controlled crossings operated by pedestrians. Push-button controls change the signals. Pelican crossings have no red-and-amber stage before green; instead, they have a flashing amber light. This means you must give way to pedestrians who are on the crossing but if the crossing is clear you can continue.

8. D - Another vehicle may be coming

If people are waiting to use a pedestrian crossing, slow down and be prepared to stop. Don't wave them across the road, because another driver may not have seen them, may not have seen your signal, and may not be able to stop safely.

9. C - Your view of the road ahead will be restricted

‘Tailgating’ is the term used when a driver or rider follows the vehicle in front too closely. It's dangerous because it restricts your view of the road ahead and leaves no safety margin if the vehicle in front needs to slow down or stop suddenly. Tailgating is often the underlying cause of rear-end collisions or multiple pile-ups.

10. B - Your view ahead will be reduced

Staying back will increase your view of the road ahead. This will help you to see any hazards that might occur and give you more time to react.

11. B - Four seconds

Water will reduce your tyres' grip on the road. The safe separation gap of at least two seconds in dry conditions should be doubled, to at least four seconds, in wet weather.

12. A - Slow down

A long lorry with a heavy load will need more time to pass you than a car, especially on an uphill stretch of road. Slow down and allow the lorry to pass.

13. A - Bomb disposal

Emergency vehicles use blue flashing lights. If you see or hear one, move out of its way as soon as it's safe and legal to do so.

14. A - Pull over as soon as it's safe to do so

Pull over in a place where the ambulance can pass safely. Check that there are no bollards or obstructions in the road that will prevent it from passing.

15. B - Doctor's car

A green flashing beacon on a vehicle means the driver or passenger is a doctor on an emergency call. Give way to them if it's safe to do so. Be aware that the vehicle may be travelling quickly or may stop in a hurry.

16. D - Tram drivers

These signs apply only to tram drivers, but you should know their meaning so that you're aware of the priorities and are able to anticipate the actions of the driver.

17. A - Cycles

The narrow wheels of a bicycle can become stuck in the tram rails, causing the cyclist to stop suddenly, wobble or even lose balance altogether. The tramlines are also slippery, which could cause a cyclist to slide or fall off.

18. D - To alert others to your presence

You mustn't use your vehicle's horn between 11.30 pm and 7 am in a built-up area or when you're stationary, unless a moving vehicle poses a danger. Its function is to alert other road users to your presence.

19. D - In the right-hand lane

When you’re in a one-way street and want to turn right, you should take up a position in the right-hand lane. This will allow other road users, not wishing to turn, to pass on the left. Indicate your intention and take up the correct position in good time.

20. C - To help other road users know what you intend to do

If you wish to turn right into a side road, take up your position in good time. Move to the centre of the road when it's safe to do so. This will allow vehicles to pass you on the left. Early planning will show other traffic what you intend to do.

21. A - Toucan

A toucan crossing is designed to allow pedestrians and cyclists to cross at the same time. Look out for cyclists approaching the crossing at speed.

22. B - Allow the vehicle to overtake

Don’t enforce the speed limit by blocking another vehicle’s progress. This will only cause frustration. Allow the other vehicle to pass when you can do so safely.

23. B - When letting them know that you're there

You should only flash your headlights to warn others of your presence. Don't use them to greet others, show impatience or give priority to other road users, because they could misunderstand your signal.

24. B - Slow down and look both ways

Be cautious, especially when your view is restricted by hedges, bushes, walls, large vehicles, etc. In the summer months, these junctions can become more difficult to deal with, because growing foliage may further obscure your view.

25. A - When checking your gap from the vehicle in front

In good conditions, the 'two-second rule' can be used to check the distance between your vehicle and the one in front. This technique works on roads carrying faster traffic. Choose a fixed object, such as a bridge, sign or tree. When the vehicle ahead passes this object, say to yourself 'Only a fool breaks the two-second rule.' If you reach the object before you finish saying this, you're too close.

26. C - Steady amber

Puffin crossings have infra-red sensors that detect when pedestrians are crossing and hold the red traffic signal until the crossing is clear. The use of a sensor means there's no flashing amber phase as there is with a pelican crossing.

27. B - Slow down, gradually increasing the gap between you and the vehicle in front

If the driver behind is following too closely, there's a danger they'll collide with the back of your vehicle if you stop suddenly. You can reduce this risk by slowing down and increasing the safety margin in front of you. This reduces the chance that you'll have to stop suddenly and allows you to spread your braking over a greater distance. This is an example of defensive driving.

28. B - Wait opposite the passing place

When you meet oncoming vehicles on a single-track road, you should allow them to pass. You should pull into a passing place on your left or wait opposite a passing place on your right. Do not move onto the verge as there may be hidden hazards.
