1. What should you do before making a U-turn?

A. Select a higher gear than normal

B. Give an arm signal as well as using your indicators

C. Check road markings to see that U-turns are permitted

D. Look over your shoulder for a final check

2. What should you do as you approach this bridge?

A. Move to the right

B. Keep to 30 mph

C. Change gear

D. Slow down

3. Where should you avoid overtaking?

A. Approaching a dip in the road

B. Just after a bend

C. In a one-way street

D. On a dual carriageway

4. What does this curved arrow road marking mean?

A. Heavy vehicles should take the next road on the left to avoid a weight limit

B. The road ahead bends to the left

C. Overtaking traffic should move back to the left

D. The road ahead has a camber to the left

5. What should you do if your mobile phone rings while you're driving or riding?

A. Leave it until you have stopped in a safe place

B. Stop immediately

C. Answer it immediately

D. Pull up at the nearest kerb

6. Why are these yellow lines painted across the road?

A. To help you choose the correct lane

B. To help you keep the correct separation distance

C. To make you aware of your speed

D. To tell you the distance to the roundabout

7. What should you do when you're approaching traffic lights that have been green for some time?

A. Brake hard

B. Maintain your speed

C. Be ready to stop

D. Accelerate hard

8. What should you do before slowing down or stopping your vehicle?

A. Select a higher gear

B. Use the mirrors

C. Sound the horn

D. Flash the headlights

9. You're following a large vehicle. Why should you stay a safe distance behind it?

A. You'll help the large vehicle to stop more easily

B. You'll give the driver a chance to see you in their mirrors

C. You'll keep out of the wind better

D. You'll be able to corner more quickly

10. Why should you use your mirrors when you see a hazard ahead?

A. Because you'll need to brake sharply and stop

B. To check what's happening on the road ahead

C. Because you'll need to accelerate out of danger

D. To assess how your actions will affect the traffic behind

11. You're waiting to turn right at the end of a road. What should you do if your view is obstructed by parked vehicles?

A. Turn your vehicle around immediately and find another junction to use

B. Move quickly to where you can see so you only block traffic from one direction

C. Stop and then move forward slowly and carefully for a clear view

D. Wait for a pedestrian to let you know when it's safe for you to emerge

12. There are objects hanging from your interior mirror. Why could this be a hazard?

A. Your view could be obstructed

B. Your sun visor might get tangled

C. Your radio reception might be affected

D. Your windscreen could mist up more easily

13. You're on a long motorway journey. What should you do if you start to feel sleepy?

A. Play some loud music

B. Leave the motorway and stop in a safe place

C. Drive faster to complete your journey sooner

D. Stop on the hard shoulder for a rest

14. Why should you switch your headlights on when it first starts to get dark?

A. Because the street lights are lit

B. To make your dials easier to see

C. So others can see you more easily

D. So that you blend in with other drivers

15. What’s most likely to distract you while you’re driving?

A. Using the windscreen wipers

B. Using a mobile phone

C. Using the mirrors

D. Using the demisters

16. You're driving your car. When may you use a hand-held mobile phone?

A. When you're receiving a call

B. When you've parked safely

C. When you're driving at less than 30 mph

D. When your car has automatic transmission

17. You're driving on a wet road. What should you do if you have to stop your vehicle in an emergency?

A. Give an arm signal

B. Apply the parking brake and footbrake together

C. Keep both hands on the steering wheel

D. Select reverse gear

18. What should you do when you move off from behind a parked car?

A. Use the exterior mirrors only

B. Give a signal after moving off

C. Look around before moving off

D. Look around after moving off

19. You're travelling along this road. How should you pass the cyclist?

A. Sound your horn as you pass

B. Keep close to them as you pass

C. Leave them plenty of room as you pass

D. Change down one gear before you pass

20. When do windscreen pillars cause a serious obstruction to your view?

A. When you're approaching bends and junctions

B. When you're driving on a motorway

C. When you're driving on a dual carriageway

D. When you're approaching a one-way street

21. What should you do if you can't see clearly behind when you're reversing?

A. Ask someone to guide you

B. Open the window to look behind

C. Open the door to look behind

D. Look in the nearside mirror

22. What does the term ‘blind spot’ mean?

A. An area covered by your right-hand mirror

B. An area not covered by your headlights

C. An area covered by your left-hand mirror

D. An area not visible to the driver

23. What's likely to happen if you use a hands-free phone while you're driving?

A. It will improve your safety

B. It will increase your concentration

C. It will reduce your view

D. It will divert your attention

24. You're turning right onto a dual carriageway. What should you do before emerging?

A. Position your vehicle well to the left of the side road

B. Check that the central reservation is wide enough for your vehicle

C. Make sure that you leave enough room for a vehicle behind

D. Stop, apply the parking brake and then select a low gear

25. You're waiting to emerge from a junction. The windscreen pillar is restricting your view. What should you be particularly aware of?

A. Lorries

B. Buses

C. Motorcyclists

D. Coaches

26. How can you make sure that a satellite navigation (sat nav) system doesn't distract you when you're driving?

A. Choose a voice that you find calming

B. Only set the destination when you're lost

C. Set it before starting your journey

D. Turn it off while you're driving in built-up areas

Answers

1. D - Look over your shoulder for a final check

If you have to make a U-turn, slow down and ensure that the road is clear in both directions. Make sure that the road is wide enough for you to carry out the manoeuvre safely. Use your mirrors and look round to check it's safe before turning across the road.

2. D - Slow down

You should slow down and be cautious. Hump bridges are often narrow and there may not be enough room for you to pass an oncoming vehicle at this point. Also, there's no footpath, so be aware of pedestrians in the road.

3. A - Approaching a dip in the road

Oncoming vehicles or other hazards can be hidden from view by dips in the road. If you can’t see into the dip, wait until you have a clear view and can see that it's safe before starting to overtake.

4. C - Overtaking traffic should move back to the left

In this picture, the road marking shows that overtaking drivers or riders need to return to the left. These markings show the direction drivers must pass hatch markings or solid double white lines. They're also used to show the route that high vehicles should take under a low arched bridge.

5. A - Leave it until you have stopped in a safe place

It’s illegal to use a hand-held mobile or similar device when driving or riding, except in a genuine emergency. The safest option is to switch off your mobile phone before you set off, and use a message service. If you've forgotten to switch your phone off and it rings, you should leave it. When you've stopped in a safe place, you can see who called and return the call if necessary.

6. C - To make you aware of your speed

These lines are often found on the approach to a roundabout or a dangerous junction. They give you extra warning to adjust your speed. Look well ahead and do this in good time.

7. C - Be ready to stop

The longer traffic lights have been green, the sooner they'll change. Allow for this as you approach traffic lights that you know have been green for a while. They're likely to change soon, so you should be prepared to stop.

8. B - Use the mirrors

Before slowing down or stopping, check the mirrors to see what's happening behind you. Also assess what's ahead and make sure you give the correct signal if it will help other road users.

9. B - You'll give the driver a chance to see you in their mirrors

If you're following a large vehicle but are so close to it that you can't see its exterior mirrors, the driver won't be able to see you. Keeping well back will also allow you to see the road ahead by looking past the large vehicle.

10. D - To assess how your actions will affect the traffic behind

You should be constantly scanning the road for clues about what's going to happen next. Check your mirrors regularly, particularly as soon as you spot a hazard. What's happening behind may affect how you respond to hazards ahead.

11. C - Stop and then move forward slowly and carefully for a clear view

At junctions, your view is often restricted by buildings, trees or parked cars. You need to be able to see in order to judge a safe gap. Edge forward slowly and keep looking all the time. Don’t cause other road users to change speed or direction as you emerge.

12. A - Your view could be obstructed

Ensure that you can see clearly through the windscreen of your vehicle. Stickers or hanging objects could obstruct your view or draw your attention away from the road.

13. B - Leave the motorway and stop in a safe place

If you feel sleepy, you should leave the motorway at a service area or at the next exit and stop in a safe place to rest. A supply of fresh air can help to keep you alert before you reach the exit, but it isn't a substitute for stopping and resting.

14. C - So others can see you more easily

Your headlights and tail lights help others on the road to see you. It may be necessary to turn on your headlights during the day if visibility is reduced; for example, due to heavy rain. In these conditions, the light might fade before the street lights are timed to switch on. Be seen to be safe.

15. B - Using a mobile phone

Except for emergencies, it’s illegal to use a hand-held mobile phone while you're driving. Even using a hands-free kit can severely distract your attention.

16. B - When you've parked safely

It's illegal to use a hand-held mobile phone while you're driving, except in a genuine emergency. Even using a hands-free kit can distract your attention. Park in a safe and convenient place before receiving or making a call or using text messaging. Then you'll also be free to take notes or refer to papers.

17. C - Keep both hands on the steering wheel

As you drive, look well ahead and all around so that you’re ready for any hazards that might develop. If you have to stop in an emergency, react as soon as you can while keeping control of the vehicle. Keep both hands on the steering wheel so you can control the vehicle's direction of travel.

18. C - Look around before moving off

Before moving off, you should use both the interior and exterior mirrors to check that the road is clear. Look around to check the blind spots and, if necessary, give a signal to warn other road users of your intentions. Also look well ahead as you'll have to steer out into the road to pass the parked car.

19. C - Leave them plenty of room as you pass

Allow the cyclist plenty of room in case they wobble or swerve around a pothole or raised drain. Look well ahead before you start to overtake, because you'll need to cross the hazard line. Look for entrances where vehicles could be waiting to pull out.

20. A - When you're approaching bends and junctions

Windscreen pillars can obstruct your view, particularly at bends and junctions. Look out for other road users – especially cyclists, motorcyclists and pedestrians who can easily be overlooked.

21. A - Ask someone to guide you

If you want to turn your car around, try to find a place where you have good all-round vision. If this isn’t possible, and you’re unable to see clearly, then get someone to guide you.

22. D - An area not visible to the driver

Modern vehicles provide the driver with a good view of both the road ahead and behind using well-positioned mirrors. However, the mirrors can’t see every angle of the scene behind and to the sides of the vehicle. It’s essential that you know when and how to check the vehicle's blind spots, so that you’re aware of any hidden hazards.

23. D - It will divert your attention

Talking to someone while you're driving can distract you and, unlike when someone is in the car with you, the person on the other end of a mobile phone is unable to see the traffic situations you're dealing with. They won't stop speaking to you even if you're approaching a hazardous situation. You need to concentrate on your driving at all times.

24. B - Check that the central reservation is wide enough for your vehicle

Before emerging right onto a dual carriageway, make sure that the central reservation is deep enough to protect your vehicle. If it isn't, you should treat the dual carriageway as one road and check that it’s clear in both directions before pulling out. Neglecting to do this could place part or all of your vehicle in the path of approaching traffic and cause a collision.

25. C - Motorcyclists

Windscreen pillars can completely block your view of pedestrians, motorcyclists and cyclists. You should make a particular effort to look for these road users; don’t just rely on a quick glance.

26. C - Set it before starting your journey

Sat navs can be useful when driving on unfamiliar routes. However, they can also distract you and cause you to lose control if you look at or adjust them while you're driving. Set the sat nav before starting your journey, or pull up in a safe place before making any changes to it.
