1. How would under-inflated tyres affect your vehicle?

A. The vehicle's gear change mechanism would become stiff

B. The vehicle's stopping distance would increase

C. The flash rate of the vehicle's indicators would increase

D. The vehicle's headlights would aim high

2. When are you not allowed to sound your vehicle's horn?

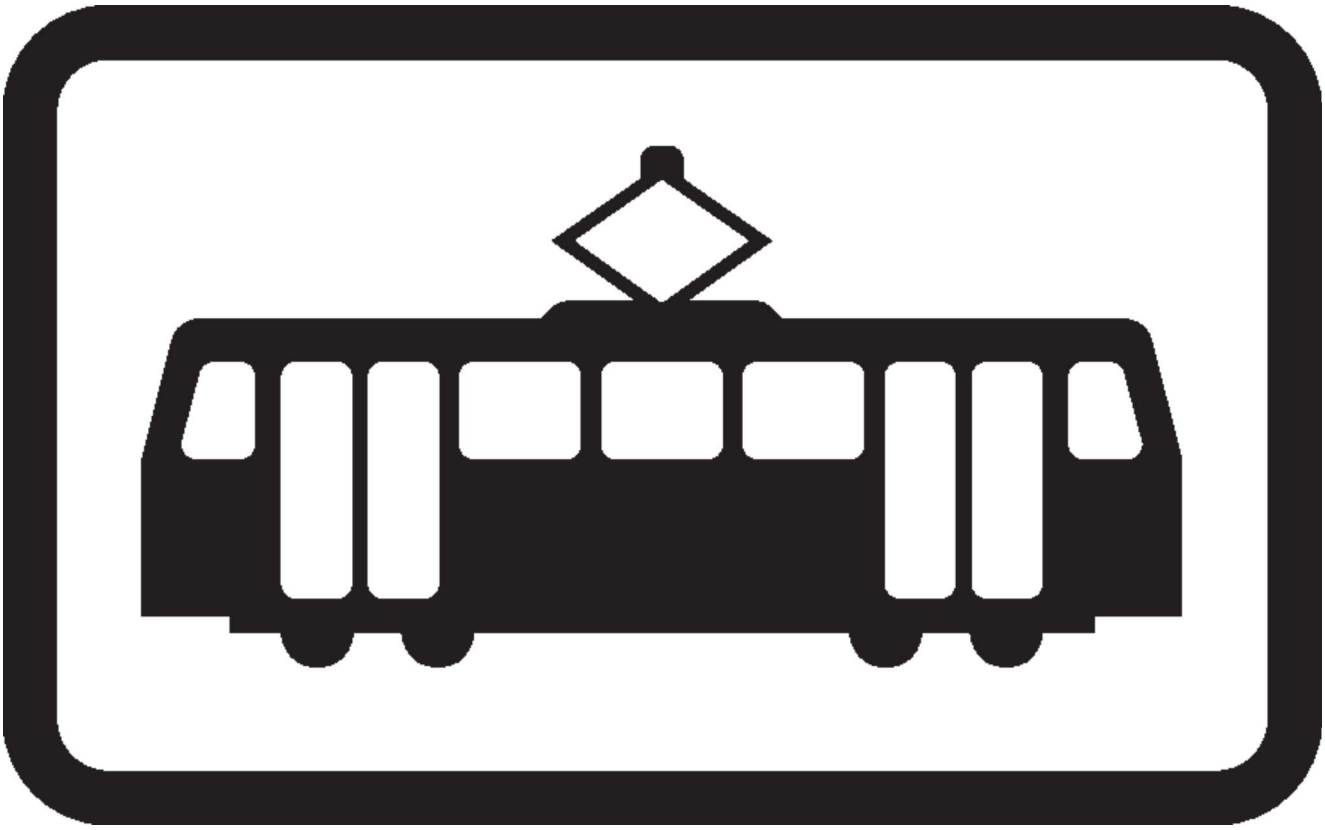

A. Between 11.30 pm and 6.00 am on any road

B. Between 11.30 pm and 7.00 am in a built-up area

C. At any time in a built-up area

D. Between 10.00 pm and 6.00 am in a built-up area

3. What makes the vehicle in the picture 'environmentally friendly'?

A. It's powered by gravity

B. It's powered by unleaded petrol

C. It's powered by electricity

D. It's powered by diesel

4. Why have 'red routes' been introduced in major cities?

A. To allow lorries to load more freely

B. To provide better parking

C. To help the traffic flow

D. To raise the speed limits

5. What's the purpose of road humps, chicanes and narrowings?

A. To reduce traffic speed

B. To allow pedestrians to cross

C. To increase traffic speed

D. To separate lanes of traffic

6. What's the purpose of a catalytic converter?

A. To reduce the risk of fire

B. To reduce engine wear

C. To reduce harmful exhaust gases

D. To reduce fuel consumption

7. When should tyre pressures be checked?

A. After travelling at high speed

B. When tyres are cold

C. After any lengthy journey

D. When tyres are hot

8. When will your vehicle use more fuel?

A. When its tyres are new

B. When its tyres are over-inflated

C. When its tyres are of different makes

D. When its tyres are under-inflated

9. How should you dispose of a used vehicle battery?

A. Leave it on waste land

B. Take it to a local-authority disposal site

C. Put it in the dustbin

D. Bury it in your garden

10. What's most likely to increase fuel consumption?

A. Harsh braking and accelerating

B. Staying in high gears

C. Accelerating around bends

D. Poor steering control

11. The fluid level in your battery is low. What fluid should you use to top it up?

A. Engine coolant

B. Engine oil

C. Distilled water

D. Battery acid

12. You're parked on the road at night. When must you use parking lights?

A. When there are continuous white lines in the middle of the road

B. When the speed limit exceeds 30 mph

C. When you're facing oncoming traffic

D. When you're near a bus stop

13. How can you reduce the environmental harm caused by your motor vehicle?

A. Drive faster than normal

B. Only use it for short journeys

C. Don't service it

D. Keep engine revs low

14. What can cause excessive or uneven tyre wear?

A. A faulty exhaust system

B. A faulty electrical system

C. A faulty braking system

D. A faulty gearbox

15. You need to top up your battery with distilled water. What level should you fill it to?

A. Just above the cell plates

B. The top of the battery

C. Halfway up the battery

D. Just below the cell plates

16. How can you plan your route before starting a long journey?

A. Consult a travel agent

B. Check your vehicle handbook

C. Ask your local garage

D. Use a route planner on the internet

17. Why is it a good idea to plan your journey to avoid busy times?

A. Your journey time will be longer

B. You'll have an easier journey

C. You'll have a more stressful journey

D. It will cause more traffic congestion

18. How will your journey be affected by travelling outside the busy times of day?

A. Your journey will use more fuel

B. Your journey will have fewer delays

C. Your journey will be more hazardous

D. Your journey will take longer

19. You plan your route before starting a journey. Why should you also plan an alternative route?

A. You may get held up by a tractor

B. Your original route may be blocked

C. Your maps may have different scales

D. You may find you have to pay a congestion charge

20. You have to arrive on time for an appointment. How should you plan for the journey?

A. Prevent other drivers from overtaking

B. Avoid roads with the national speed limit

C. Plan to travel at busy times

D. Allow plenty of time for the trip

21. What can you expect if you drive using rapid acceleration and heavy braking?

A. Increased fuel consumption

B. Reduced pollution

C. Reduced exhaust emissions

D. Increased road safety

22. What could cause you to crash if the level is allowed to get too low?

A. Battery-water level

B. Brake-fluid level

C. Radiator-coolant level

D. Anti-freeze level

23. What should you do if your anti-lock brakes (ABS) warning light stays on?

A. Check the footbrake free play

B. Have the brakes checked immediately

C. Check that the parking brake is released

D. Check the brake-fluid level

24. What does it mean if this light comes on while you're driving?

A. Your seat belt isn't fastened

B. A fault in the braking system

C. The engine oil is low

D. A rear light has failed

25. Why is it important to wear suitable shoes when you're driving?

A. To prevent wear on the pedals

B. To maintain control of the pedals

C. To enable you to adjust your seat

D. To enable you to walk for assistance if you break down

26. If you're involved in a collision, what will reduce the risk of neck injury?

A. A properly adjusted head restraint

B. An air-sprung seat

C. Anti-lock brakes

D. A collapsible steering wheel

27. What does it mean if your vehicle keeps bouncing after you sharply press down and release on the bodywork over a wheel?

A. The tyres are worn

B. The tyres are under inflated

C. The vehicle is on soft ground

D. The shock absorbers are worn

28. How will a roof rack affect your car?

A. Fuel consumption will increase

B. There will be less wind noise

C. The engine will use more oil

D. The car will accelerate faster

29. What makes your tyres illegal?

A. If they have different tread patterns

B. If they're of different makes

C. If they have any large, deep cuts in the side wall

D. If they were bought second-hand

30. What's the legal minimum depth of tread for car tyres?

A. 4 mm

B. 2.5 mm

C. 1.6 mm

D. 1 mm

31. You're carrying two 13-year-old children and their parents in your car. Who's responsible for seeing that the children wear seat belts?

A. The children

B. The front-seat passenger

C. You, the driver

D. The children's parents

32. How can drivers help the environment?

A. By driving faster

B. By using leaded fuel

C. By accelerating gently

D. By accelerating harshly

33. How can you avoid wasting fuel?

A. By driving at higher speeds where possible

B. By keeping an empty roof rack on your vehicle

C. By revving the engine in the lower gears

D. By having your vehicle serviced regularly

34. What could you do to reduce the volume of traffic on the roads?

A. Travel by car at all times

B. Drive in a bus lane

C. Use a car with a smaller engine

D. Walk or cycle on short journeys

35. What's most likely to waste fuel?

A. Reducing your speed

B. Under-inflated tyres

C. Using different brands of fuel

D. Driving on motorways

36. What part of the car does the law require you to keep in good condition?

A. The seat belts

B. The gearbox

C. The transmission

D. The door locks

37. How much more fuel will you use by driving at 70 mph, compared with driving at 50 mph?

A. About 5%

B. About 100%

C. About 75%

D. About 15%

38. What should you do if your vehicle pulls to one side when you use the brakes?

A. Have the brakes checked as soon as possible

B. Change gear and pump the brake pedal

C. Use your parking brake at the same time

D. Increase the pressure in your tyres

39. What will happen if your car's wheels are unbalanced?

A. The steering will pull to one side

B. The steering will vibrate

C. The brakes will fail

D. The tyres will deflate

40. What can be damaged if you turn the steering wheel when the car isn't moving?

A. The gearbox

B. The engine

C. The brakes

D. The tyres

41. What's the safest thing to do if you have to leave valuables in your car?

A. Park near a bus stop

B. Lock them out of sight

C. Park near a school entrance

D. Put them in a carrier bag

42. What may help to deter a thief from stealing your car?

A. Always keeping the headlights on

B. Fitting reflective glass windows

C. Always keeping the interior light on

D. Etching the registration number on the windows

43. What should you remove from your car before leaving it unattended?

A. The car dealer's details

B. The owner's manual

C. The service record

D. The vehicle registration document

44. What should you do when leaving your vehicle parked and unattended?

A. Park near a busy junction

B. Park in a housing estate

C. Lock it and remove the key

D. Leave the left indicator on

45. What will reduce fuel consumption?

A. Driving more slowly

B. Accelerating rapidly

C. Late and heavy braking

D. Staying in lower gears

46. You service your own vehicle. How should you dispose of the old engine oil?

A. Take it to a local-authority site

B. Pour it down a drain

C. Tip it into a hole in the ground

D. Put it in your dustbin

47. Why do MOT tests include an exhaust emission test?

A. To recover the cost of expensive garage equipment

B. To help protect the environment against pollution

C. To discover which fuel supplier is used the most

D. To make sure diesel and petrol engines emit the same fumes

48. How can you reduce the damage your vehicle causes to the environment?

A. Use narrow side streets

B. Brake heavily

C. Use busy routes

D. Anticipate well ahead

49. How will you benefit from following the manufacturer's service schedule for your vehicle?

A. Your journey times will be reduced

B. Your vehicle will be cheaper to insure

C. Your vehicle tax will be lower

D. Your vehicle will remain reliable

50. How should you drive when you're driving along a road that has road humps?

A. Always keep to the maximum legal speed

B. Maintain a reduced speed throughout

C. Accelerate quickly between the humps

D. Drive slowly at school times only

51. When should you check the engine oil level?

A. Early in the morning

B. Before a long journey

C. When the engine is hot

D. Every time you drive the car

52. You're having difficulty finding a parking space in a busy town. Can you park on the zigzag lines of a zebra crossing?

A. Yes, if you don't block people from crossing

B. No, not unless you stay with your car

C. Yes, in order to drop off a passenger

D. No, not under any circumstances

53. What should you do when you leave your car unattended for a few minutes?

A. Lock it and remove the key

B. Leave the engine running

C. Switch the engine off but leave the key in

D. Park near a traffic warden

54. Why should you try and park in a secure car park?

A. It stops the car being exposed to bad weather

B. It makes it easy to find your car

C. It helps deter thieves

D. It doesn't cost anything to park here

55. Where would parking your vehicle cause an obstruction?

A. In front of a property entrance

B. Alongside a parking meter

C. On your driveway

D. In a marked parking space

56. What's the most important reason for having a properly adjusted head restraint?

A. To help you maintain your driving position

B. To make you more comfortable

C. To help you avoid neck injury

D. To help you relax

57. What can you do to reduce environmental damage caused by your vehicle?

A. Use the gears to slow the vehicle

B. Avoid using the cruise control

C. Use the air conditioning whenever you drive

D. Avoid making a lot of short journeys

58. What can people who live or work in towns and cities do to help reduce urban pollution levels?

A. Walk or cycle

B. Drive more quickly

C. Over-rev in a low gear

D. Drive short journeys

59. How can you reduce the chances of your car being broken into when leaving it unattended?

A. Place any valuables on the floor

B. Take all valuables with you

C. Park near a taxi rank

D. Park near a fire station

60. How can you help to prevent your car radio being stolen?

A. Park near a busy junction

B. Park in an unlit area

C. Leave the radio turned on

D. Install a security-coded radio

61. How can you reduce the risk of your vehicle being broken into at night?

A. Park in a quiet side road

B. Leave it in a well-lit area

C. Park in a poorly lit area

D. Don’t engage the steering lock

62. What will help you to keep your car secure?

A. Registering with a Vehicle Watch scheme

B. Taking car maintenance classes

C. Passing an advanced driving test

D. Being a member of a vehicle breakdown organisation

63. On a vehicle, where would you find a catalytic converter?

A. On the exhaust system

B. In the fuel tank

C. In the air filter

D. On the cooling system

64. What can you achieve if you drive smoothly?

A. Reduction in fuel consumption by about 15%

B. Reduction in journey times by about 15%

C. Increase in fuel consumption by about 15%

D. Increase in journey times by about 15%

65. Which driving technique can help you save fuel?

A. Using each gear in turn

B. Using lower gears as often as possible

C. Accelerating sharply in each gear

D. Missing out some gears

66. How can driving in a fuel-efficient manner help protect the environment?

A. Through increased fuel bills

B. Through the legal enforcement of speed regulations

C. By increasing the number of cars on the road

D. By reducing exhaust emissions

67. What does fuel-efficient driving achieve?

A. Damage to the environment

B. Increased fuel consumption

C. Improved road safety

D. Increased exhaust emissions

68. What's the legal minimum tread depth for tyres on your trailer or caravan?

A. 2 mm

B. 1 mm

C. 1.6 mm

D. 2.6 mm

69. When is fuel consumption at its highest?

A. When you're accelerating

B. When you're braking

C. When you're coasting

D. When you're turning sharply

70. When may a passenger travel in a car without wearing a seat belt?

A. When they're under 1.5 metres (5 feet) in height

B. When they're under 14 years old

C. When they're sitting in the rear seat

D. When they're exempt for medical reasons

71. You're driving a friend's children home from school. They're both under 14 years old. Who's responsible for making sure they wear a seat belt or approved child restraint where required?

A. Your friend

B. An adult passenger

C. The children

D. You, the driver

72. What's likely to happen if you put too much oil in your engine?

A. The timing belt will slip

B. The clutch pedal will lock

C. The air intake will become blocked

D. The oil seals will leak

73. You have to make an unexpected journey. You're carrying a five-year-old child on the back seat of your car. They're under 1.35 metres (4 feet 5 inches) tall. How should you seat them if a correct child restraint isn't available?

A. Sharing a belt with an adult

B. Behind the passenger seat

C. Using an adult seat belt

D. Between two other children

74. You're carrying an 11-year-old child on the front seat of your car. They're under 1.35 metres (4 feet 5 inches) tall. What seat belt security must be in place?

A. They must use a suitable child restraint

B. They must use an adult seat belt

C. They must be able to fasten their own seat belt

D. They must be able to see clearly out of the front window

75. You're stopped at the side of the road. What must you do if you'll be waiting there for some time?

A. Switch off the radio

B. Switch off the engine

C. Apply the steering lock

D. Use your headlights

76. You want to put a rear-facing baby seat on the front passenger seat. What must you do if the passenger seat is protected by a frontal airbag?

A. Ask a passenger to hold the baby

B. Deactivate the airbag

C. Turn the seat to face sideways

D. Put the child in an adult seat belt

77. You're leaving your vehicle parked on a road and unattended. When may you leave the engine running?

A. Never if you're away from the vehicle

B. If you'll be parking for less than five minutes

C. If the battery keeps going flat

D. When parked in a 20 mph zone

Answers

1. B - The vehicle's stopping distance would increase

Your tyres are your only contact with the road. To prevent problems with braking and steering, keep your tyres free from defects; they must have sufficient tread depth and be correctly inflated. Correct tyre pressures help reduce the risk of skidding and provide a safer and more comfortable drive or ride.

2. B - Between 11.30 pm and 7.00 am in a built-up area

Every effort must be made to prevent excessive noise, especially in built-up areas at night. Don’t rev your engine or sound the horn unnecessarily. It's illegal to sound your horn in a built-up area between 11.30 pm and 7.00 am, except when another road user poses a danger.

3. C - It's powered by electricity

Trams are powered by electricity and therefore don't emit exhaust fumes. They ease traffic congestion by offering drivers an alternative to using their car, particularly in busy cities and towns.

4. C - To help the traffic flow

Inconsiderate parking can obstruct the flow of traffic and so make traffic congestion worse. Red routes are designed to prevent this by enforcing strict parking restrictions. Driving slowly in traffic increases fuel consumption and causes a build-up of exhaust fumes.

5. A - To reduce traffic speed

Traffic-calming measures help to keep vehicle speeds low in congested areas where there are pedestrians and children. A pedestrian is much more likely to survive a collision with a vehicle travelling at 20 mph than they are with a vehicle travelling at 40 mph.

6. C - To reduce harmful exhaust gases

Catalytic converters reduce a large percentage of harmful exhaust emissions. They work more efficiently when the engine has reached its normal working temperature.

7. B - When tyres are cold

Check the tyre pressures when the tyres are cold. This will give you a more accurate reading. The heat generated on a long journey will raise the pressure inside the tyre.

8. D - When its tyres are under-inflated

Check your tyre pressures frequently - normally once a week. If they're lower than those recommended by the manufacturer, there will be more 'rolling resistance'. The engine will have to work harder to overcome this, leading to increased fuel consumption.

9. B - Take it to a local-authority disposal site

Batteries contain acid, which is hazardous, and they must be disposed of safely. This means taking them to an appropriate disposal site.

10. A - Harsh braking and accelerating

Accelerating and braking gently and smoothly will help to save fuel and reduce wear on your vehicle. This makes it better for the environment too.

11. C - Distilled water

Some modern batteries are maintenance free. Check your vehicle handbook and, if necessary, make sure that the plates in each battery cell are covered with fluid.

12. B - When the speed limit exceeds 30 mph

When parking at night, park in the direction of the traffic. This will enable other road users to see the reflectors on the rear of your vehicle. Use your parking lights if the speed limit is over 30 mph.

13. D - Keep engine revs low

Engines that burn fossil fuels produce exhaust emissions that are harmful to health. The harder you make the engine work, the more emissions it will produce. Engines also use more fuel and produce higher levels of emissions when they're cold. Anything you can do to reduce your use of fossil fuels will help the environment.

14. C - A faulty braking system

If you see that parts of the tread on your tyres are wearing before others, it may indicate a brake, suspension or wheel-alignment fault. Regular servicing will help to detect faults at an early stage and this will avoid the risk of minor faults becoming serious or even dangerous.

15. A - Just above the cell plates

Top up the battery with distilled water and make sure each cell plate is covered.

16. D - Use a route planner on the internet

Various route planners are available on the internet. Most of them give you several options, allowing you to choose between the most direct route and quieter roads. They may also identify rest and fuel stops. Print off the directions and take them with you.

17. B - You'll have an easier journey

No-one likes to spend time in traffic queues. Try to avoid busy times related to school or work travel.

18. B - Your journey will have fewer delays

If possible, avoid the early morning, late afternoon and early evening ‘rush hour’. Doing this should allow you to have a better journey, with fewer delays. This should help you to arrive at your destination feeling less stressed.

19. B - Your original route may be blocked

It can be frustrating and worrying to find your planned route is blocked by roadworks or diversions. If you've planned an alternative, you'll feel less stressed and more able to concentrate fully on your driving or riding. If your original route is mostly on motorways, it’s a good idea to plan an alternative using non-motorway roads. Always carry a map with you just in case you need to refer to it.

20. D - Allow plenty of time for the trip

Always allow plenty of time for your journey in case of unforeseen problems. Anything can happen; for example, punctures, breakdowns, road closures, diversions and delays. You'll feel less stressed and less inclined to take risks if you aren't ‘pushed for time’.

21. A - Increased fuel consumption

Using the controls smoothly can reduce fuel consumption by about 15%, as well as reducing wear and tear on your vehicle. Plan ahead and anticipate changes of speed well in advance. This will reduce the need to accelerate rapidly or brake sharply.

22. B - Brake-fluid level

You should carry out frequent checks on all fluid levels but particularly brake fluid. As the brake pads or shoes wear down, the brake-fluid level will drop. If it drops below the minimum mark on the fluid reservoir, air could enter the hydraulic system and lead to a loss of braking efficiency or even complete brake failure.

23. B - Have the brakes checked immediately

Consult the vehicle handbook or a garage before driving the vehicle any further. Only drive to a garage if it's safe to do so. If you aren't sure, get expert help.

24. B - A fault in the braking system

If this light comes on, you should have the brake system checked immediately. A faulty braking system could have dangerous consequences.

25. B - To maintain control of the pedals

When you’re going to drive, make sure that you’re wearing suitable clothing. Comfortable shoes will ensure that you have proper control of the foot pedals.

26. A - A properly adjusted head restraint

If you’re involved in a collision, head restraints will reduce the risk of neck injury. They must be properly adjusted. Make sure they aren’t positioned too low: in a crash, this could cause damage to the neck.

27. D - The shock absorbers are worn

If you find that your vehicle bounces as you drive around a corner or bend in the road, the shock absorbers might be worn. To test your shock absorbers, sharply press down and release above each wheel. If the vehicle continues to bounce, take it to be checked by a qualified mechanic.

28. A - Fuel consumption will increase

A roof rack increases your car's wind resistance. This will cause an increase in fuel consumption, so you should remove it when it isn't being used. An aerodynamically designed roof rack or box will help reduce wind resistance to a minimum, but the rack or box should still be removed when it isn't in use.

29. C - If they have any large, deep cuts in the side wall

Your tyres may be of different treads and makes. They can even be second-hand, as long as they're in good condition. They must, however, be intact, without cuts or tears. When checking the side walls for cuts and bulges, don’t forget to check the side of the tyre that's hidden from view, under the car.

30. C - 1.6 mm

Car tyres must have sufficient depth of tread to give them a good grip on the road surface. The legal minimum for cars is 1.6 mm. This depth should be across the central three-quarters of the breadth of the tyre and around the entire circumference.

31. C - You, the driver

Seat belts save lives and reduce the risk of injury. If you're carrying passengers under 14 years old, it's your responsibility as the driver to ensure that their seat belts are fastened or they're seated in an approved child restraint.

32. C - By accelerating gently

Rapid acceleration and heavy braking lead to increased • fuel consumption • wear on your vehicle. Having your vehicle serviced regularly will maintain its efficiency, produce cleaner emissions and reduce the risk of a breakdown.

33. D - By having your vehicle serviced regularly

If you don't have your vehicle serviced regularly, the engine will gradually become less efficient. This will cause increased fuel consumption and, in turn, an increase in the amount of harmful emissions it produces.

34. D - Walk or cycle on short journeys

Try not to use your car as a matter of routine. For shorter journeys, consider walking or cycling instead - this is much better for both you and the environment.

35. B - Under-inflated tyres

Wasting fuel costs you money and also causes unnecessary pollution. Ensuring your tyres are correctly inflated, avoiding carrying unnecessary weight and removing a roof rack that's not in use will all help to reduce your fuel consumption.

36. A - The seat belts

Unless exempt, you and your passengers must wear a seat belt (or suitable child restraint). The seat belts in your car must be in good condition and working properly; they’ll be checked during its MOT test.

37. D - About 15%

Your vehicle will use less fuel if you avoid heavy acceleration. The higher the engine revs, the more fuel you'll use. Using the same gear, and covering the same distance, a vehicle travelling at 70 mph will use about 15% more fuel than it would at 50 mph. However, don’t travel so slowly that you inconvenience or endanger other road users.

38. A - Have the brakes checked as soon as possible

The brakes on your vehicle must be effective and properly adjusted. If your vehicle pulls to one side when braking, take it to be checked by a qualified mechanic as soon as you can.

39. B - The steering will vibrate

If your wheels are out of balance, it will cause the steering to vibrate at certain speeds. This isn't a fault that will put itself right, so take your vehicle to a garage or tyre fitter to have the wheels rebalanced.

40. D - The tyres

Turning the steering wheel when the car isn't moving is known as dry steering. It can cause unnecessary wear to the tyres and steering mechanism.

41. B - Lock them out of sight

If you have to leave valuables in your car, lock them out of sight. This is the best way to deter an opportunist thief.

42. D - Etching the registration number on the windows

Having your car registration number etched on all your windows is a cheap and effective way to deter professional car thieves.

43. D - The vehicle registration document

Never leave the vehicle registration document inside your car. This document would help a thief to dispose of your car more easily.

44. C - Lock it and remove the key

An unlocked car is an open invitation to thieves. Leaving the keys in the ignition not only makes your car easy to steal but could also invalidate your insurance.

45. A - Driving more slowly

Harsh braking, frequent gear changes and harsh acceleration increase fuel consumption. A car uses less fuel when travelling at a constant low speed in an appropriate high gear. You need to look well ahead so you’re able to anticipate hazards early. Easing off the accelerator and timing your approach at junctions, for example, can reduce the fuel consumption of your vehicle.

46. A - Take it to a local-authority site

It's illegal to pour engine oil down any drain. Oil is a pollutant and harmful to wildlife. Dispose of it safely at an authorised site.

47. B - To help protect the environment against pollution

Emission tests are carried out to make sure your vehicle’s engine is operating efficiently. This ensures the pollution produced by the engine is kept to a minimum. If your vehicle isn't serviced regularly, it may fail the MOT emissions test.

48. D - Anticipate well ahead

By looking well ahead and recognising hazards in good time, you can avoid late and heavy braking. Watch the traffic flow and look well ahead for potential hazards so you can control your speed in good time. Avoid over-revving the engine and accelerating harshly, as this increases wear to the engine and uses more fuel.

49. D - Your vehicle will remain reliable

All vehicles need to be serviced to keep working efficiently. An efficient engine uses less fuel and produces fewer harmful emissions than an engine that's running inefficiently. Keeping the vehicle serviced to the manufacturer's schedule should also keep it reliable and reduce the chance of it breaking down.

50. B - Maintain a reduced speed throughout

Road humps are there for a reason – to protect vulnerable road users by reducing the speed of traffic. Don’t accelerate harshly between the humps. Put the safety of others first and maintain a reduced speed throughout the zone.

51. B - Before a long journey

An engine can use more oil during long journeys than on shorter trips. Insufficient engine oil is potentially dangerous: it can lead to excessive wear, mechanical breakdown and expensive repairs. Most cars have a dipstick to allow the oil level to be checked. If not, you should refer to the vehicle handbook.

52. D - No, not under any circumstances

It’s an offence to park on the zigzag lines of a zebra crossing. You'll be causing an obstruction by obscuring the view of both pedestrians and drivers.

53. A - Lock it and remove the key

Always switch off the engine, remove the key and lock your car, even if you're only leaving it for a few minutes.

54. C - It helps deter thieves

Whenever possible, leave your car in a secure car park. This will help deter thieves.

55. A - In front of a property entrance

Don’t park your vehicle where it may obstruct access to a business or property. Think carefully before you slow down and stop. Look at road markings and signs to ensure that you aren’t parking illegally.

56. C - To help you avoid neck injury

In a collision, rapid deceleration will violently throw vehicle occupants forward and then backwards as the vehicle stops. Seat belts and airbags protect occupants against the forward movement. Head restraints should be adjusted so they give maximum protection to the head and neck during the backward movement.

57. D - Avoid making a lot of short journeys

Avoid using your car for short journeys. On a short journey, the engine is unlikely to warm up fully and will therefore be running less efficiently. This will result in the car using more fuel and emitting higher levels of harmful emissions.

58. A - Walk or cycle

Using a vehicle for short journeys means the engine doesn't have time to reach its normal operating temperature. When an engine is running below its normal operating temperature, it produces increased amounts of pollution. Walking and cycling don't create pollution and have health benefits as well.

59. B - Take all valuables with you

When leaving your car, take all valuables with you if you can. Otherwise, lock them out of sight.

60. D - Install a security-coded radio

A security-coded radio can deter thieves, as it's likely to be of little use when removed from the vehicle.

61. B - Leave it in a well-lit area

Having your vehicle broken into or stolen can be very distressing and inconvenient. Avoid leaving your vehicle unattended in poorly lit areas.

62. A - Registering with a Vehicle Watch scheme

The Vehicle Watch scheme helps to reduce the risk of your car being stolen. By displaying high-visibility Vehicle Watch stickers in your car, you're inviting the police to stop your vehicle if it's seen in use between midnight and 5 am.

63. A - On the exhaust system

Although carbon dioxide is still produced, a catalytic converter fitted to the exhaust system reduces the toxic and polluting gases by up to 90%.

64. A - Reduction in fuel consumption by about 15%

By driving smoothly, you'll not only save about 15% of your fuel but will also reduce the amount of wear and tear on your vehicle and the level of pollution it produces. You're also likely to feel more relaxed and have a more pleasant journey.

65. D - Missing out some gears

Missing out intermediate gears, when appropriate, helps to reduce the amount of time spent accelerating and decelerating - the times when your vehicle uses the most fuel.

66. D - By reducing exhaust emissions

Fuel-efficient driving is all about looking and planning further ahead. This helps raise your hazard awareness and reduces the need for late and heavy braking. This will make your journeys more comfortable, as well as considerably reducing your fuel bills and reducing emissions that can damage the environment.

67. C - Improved road safety

The emphasis is on hazard awareness and planning ahead. By looking well ahead, you'll have plenty of time to deal with hazards safely and won’t need to brake sharply. This will also reduce damage to the environment.

68. C - 1.6 mm

Trailers and caravans may be left in storage over the winter months, and tyres can deteriorate. It’s important to check their tread depth and also their pressures and general condition. The legal tread depth of 1.6 mm applies to the central three-quarters of a tyre's breadth, over its entire circumference.

69. A - When you're accelerating

Accelerating uses a lot of fuel, so always try to use the accelerator smoothly. Taking your foot off the accelerator allows the momentum of the car to take you forward, especially when going downhill. This can save a considerable amount of fuel without any loss of control over the vehicle.

70. D - When they're exempt for medical reasons

If you have adult passengers, it's their responsibility to wear a seat belt, but you should still remind them to use one as they get in the car. It's your responsibility to make sure that all children in your car are secured with an appropriate restraint. Exemptions are allowed for those with a medical exemption certificate.

71. D - You, the driver

Passengers should always be secured and safe. Children should be encouraged to fasten their seat belts or approved restraints themselves from an early age, so that it becomes a matter of routine. As the driver, you must check that they're fastened securely. It's your responsibility.

72. D - The oil seals will leak

Too much oil will lead to increased pressure in the engine. This could damage oil seals and lead to oil leaks. Any excess oil should be drained off.

73. C - Using an adult seat belt

In journeys of unexpected necessity, and when a correct child restraint isn't available, the child must sit on the rear seat and use an adult seat belt. In a collision, unrestrained objects and people can cause serious injury or even death.

74. A - They must use a suitable child restraint

As the driver, it's your responsibility to make sure that children are secure and safe in your vehicle. Make yourself familiar with the rules. When children are carried on the back seat, there are a few very exceptional cases when an adult seat belt can be used instead of a correct child restraint.

75. B - Switch off the engine

If your vehicle is stationary and is likely to remain so for some time, you must switch off the engine unless you're stationary in traffic or diagnosing a fault.

76. B - Deactivate the airbag

It's illegal to fit a rear-facing baby seat into a passenger seat protected by an active frontal airbag. If the airbag activates, it could cause serious injury or even death to the child. You must secure it in a different seat or deactivate the relevant airbag. Follow the manufacturer's advice when fitting a baby seat.

77. A - Never if you're away from the vehicle

When you leave your vehicle parked on a road, switch off the engine and secure the vehicle. Make sure no valuables are visible, shut all the windows, lock the vehicle, and set the alarm if the vehicle has one.
