1. Where would you expect to see these markers?

A. On a motorway sign

B. On a diversion sign

C. On a large goods vehicle

D. On a railway bridge

2. What's the main hazard shown in this picture?

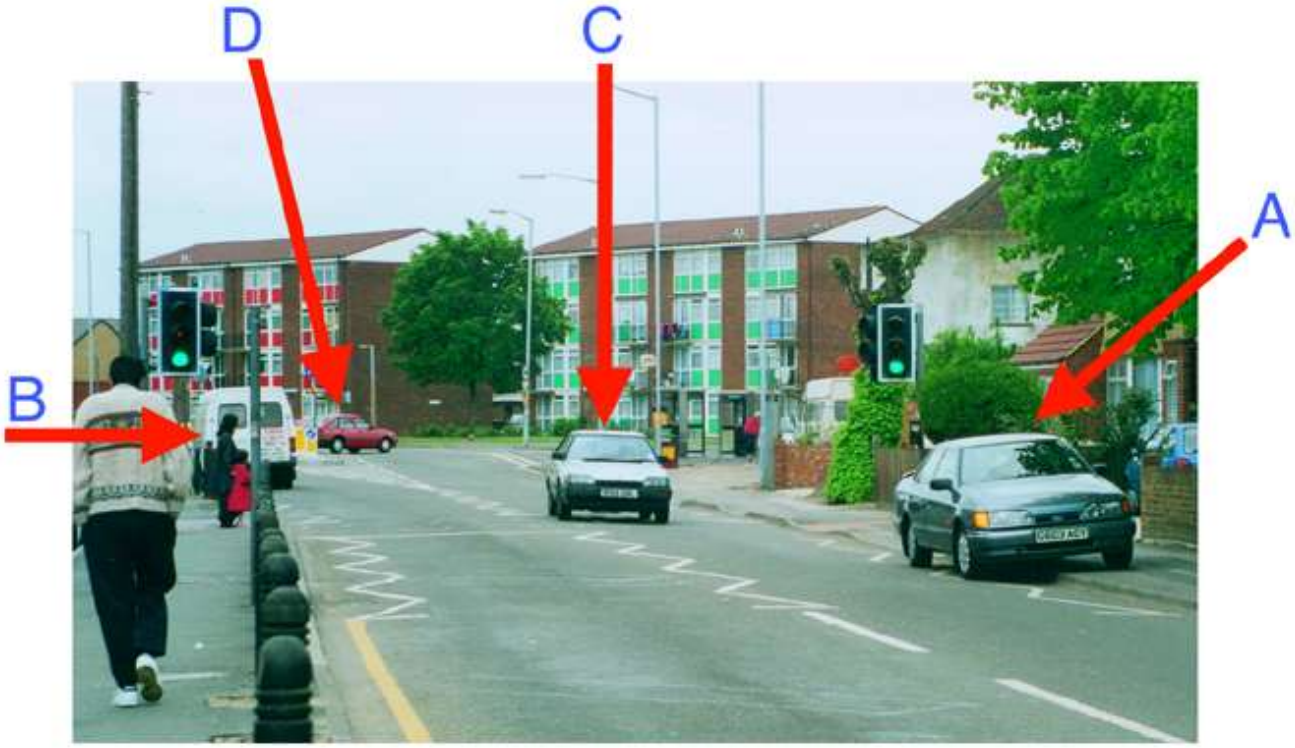

A. Vehicles doing U-turns

B. Parked cars around the corner

C. The cyclist crossing the road

D. Vehicles turning right

3. Which road user has caused a hazard?

A. The pedestrian waiting to cross (arrowed B)

B. The car turning (arrowed D)

C. The moving car (arrowed C)

D. The parked car (arrowed A)

4. What should the driver of the car approaching the crossing do?

A. Sound the horn

B. Slow down and get ready to stop

C. Drive through quickly

D. Continue at the same speed

5. What should the driver of the grey car be especially aware of?

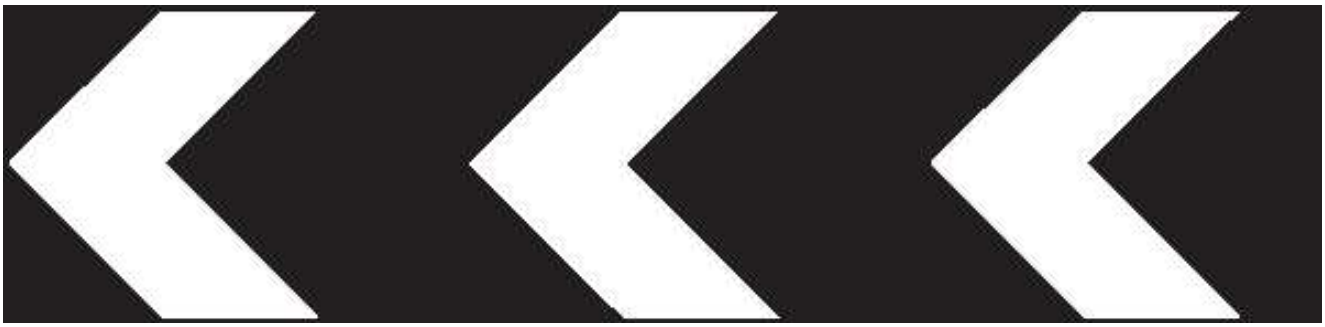

A. Traffic following behind

B. Empty parking spaces

C. Doors opening on parked cars

D. The uneven road surface

6. What should you expect if you see this sign ahead?

A. The road will go steeply downhill

B. The road will bend sharply to the right

C. The road will bend sharply to the left

D. The road will go steeply uphill

7. What should you do as you approach this cyclist?

A. Flash your headlights at the cyclist

B. Rev your engine so the cyclist knows you're following behind

C. Slow down and allow the cyclist to turn

D. Try to overtake before the cyclist gets to the junction

8. Why must you take great care when emerging from this junction?

A. The footpath is narrow

B. The view is restricted

C. The kerbs are high

D. The road surface is poor

9. Which type of vehicle should you be ready to give way to as you approach this bridge?

A. Motorcycles

B. Cars

C. Buses

D. Bicycles

10. What type of vehicle could you expect to meet in the middle of the road?

A. Lorry

B. Motorcycle

C. Car

D. Bicycle

11. What must you do at this junction?

A. Stop beyond the line, at a point where you can see clearly

B. Stop only if you're turning right

C. Stop only if there's traffic on the main road

D. Stop behind the line, then edge forward to see clearly

12. What should you do if a driver pulls out of a side road in front of you, causing you to brake hard?

A. Flash your lights to show your annoyance

B. Overtake as soon as possible

C. Sound your horn to show your annoyance

D. Ignore the error and stay calm

13. Why should you make allowances for older drivers?

A. Older drivers can only drive cars that have automatic gearboxes

B. Older drivers take more risks than other drivers

C. Older drivers reactions may be slower than other drivers

D. Older drivers are exempt from wearing seat belts

14. Do you need to plan rest stops when you’re planning a long journey?

A. Yes, regular stops help concentration

B. No, only fuel stops will be needed

C. No, you’ll be less tired if you get there as soon as possible

D. Yes, you should plan to stop every half an hour

15. What should you do if the red lights start flashing as you approach a level crossing?

A. Go over it carefully

B. Switch on your hazard warning lights

C. Stop before the barrier

D. Go over it quickly

16. You're approaching a crossroads. What should you do if the traffic lights have failed?

A. Brake sharply to a stop before looking

B. Be prepared to stop for any traffic

C. Be prepared to brake sharply to a stop

D. Brake and stop only for large vehicles

17. What should the driver of the red car (arrowed) do?

A. Quickly drive behind the pedestrian in the road

B. Tell the pedestrian in the road she shouldn't have crossed

C. Wave towards the pedestrians who are waiting to cross

D. Wait for the pedestrian in the road to cross

18. You're following a slower-moving vehicle. What should you do if there's a junction just ahead on the right?

A. Overtake after checking your mirrors and signalling

B. Slow down and prepare to overtake on the left

C. Accelerate quickly to overtake before reaching the junction

D. Only consider overtaking when you're past the junction

19. What should you do as you approach this overhead bridge?

A. Move out to the centre of the road before going through

B. Move across to the right-hand side before going through

C. Be prepared to give way to large vehicles in the middle of the road

D. Find another route; this one is only for high vehicles

20. Why are vehicle mirrors often slightly curved (convex)?

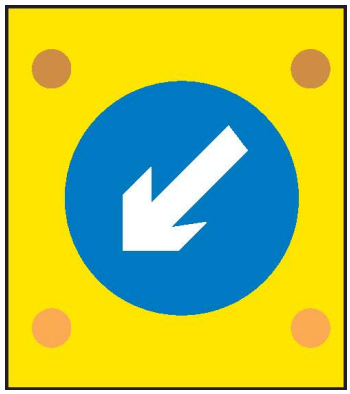

A. They totally cover blind spots

B. They make the traffic behind look bigger

C. They make it easier to judge the speed of the traffic behind

D. They give a wider field of vision

21. You're on a three-lane motorway. How should you overtake a slow-moving lorry in the middle lane if it's showing this sign?

A. Follow the lorry until you can leave the motorway

B. Approach with care and overtake on the left of the lorry

C. Use the right-hand lane and overtake the lorry normally

D. Cautiously approach the lorry, then overtake on either side

22. What should you do if you think the driver of the vehicle in front has forgotten to cancel their right indicator?

A. Sound your horn before overtaking

B. Stay behind and don't overtake

C. Overtake on the left if there's room

D. Flash your lights to alert the driver

23. What's the main hazard the driver of the red car (arrowed) should be aware of?

A. The black car may stop suddenly

B. Oncoming vehicles will assume the driver is turning right

C. The bus may move out into the road

D. Glare from the sun may affect the driver's vision

24. What type of vehicle displays this yellow sign?

A. A school bus

B. A private ambulance

C. An ice-cream van

D. A broken-down vehicle

25. What hazard should you be aware of when travelling along this street?

A. Lack of road markings

B. Large goods vehicles

C. Children running out between vehicles

D. Glare from the sun

26. What's the main hazard you should be aware of when following this cyclist?

A. The cyclist may swerve into the road

B. The cyclist may wish to turn right at the end of the road

C. The cyclist may get off and push their bicycle

D. The cyclist may move to the left and dismount

27. A driver’s behaviour has upset you. How can you get over this incident safely?

A. Stop and take a break

B. Follow them, flashing your headlights

C. Gesture to them with your hand

D. Shout abusive language

28. How should you drive or ride in areas with traffic-calming measures?

A. At a reduced speed

B. With headlights on dipped beam

C. In the centre of the road

D. At the speed limit

29. Why should you slow down as you approach this hazard?

A. Because it's hard to see to the right

B. Because of animals crossing

C. Because of approaching traffic

D. Because of the level crossing

30. Why are place names painted on the road surface?

A. To warn of oncoming traffic

B. To prevent you from changing lanes

C. To help you select the correct lane in good time

D. To restrict the flow of traffic

31. Some two-way roads are divided into three lanes. Why are they particularly dangerous?

A. Traffic can travel faster in poor weather conditions

B. Traffic uses the middle lane for emergencies only

C. Traffic can overtake on the left

D. Traffic in both directions can use the middle lane to overtake

32. What type of vehicle uses an amber flashing beacon on a dual carriageway?

A. A fire engine

B. A tractor

C. A doctor on call

D. An ambulance

33. What does this signal from a police officer mean to oncoming traffic?

A. Stop

B. Turn right

C. Turn left

D. Go ahead

34. Why should you be cautious when going past this bus waiting at a bus stop?

A. There are driveways on the left

B. The road surface will be slippery

C. People may cross the road in front of it

D. There's a zebra crossing ahead

35. Where would it be unsafe to overtake?

A. On a one-way street

B. Travelling up a long hill

C. Approaching a junction

D. On a single carriageway

36. How can drinking alcohol affect your ability to drive or ride?

A. Your confidence will be reduced

B. Your awareness of danger will be improved

C. Your reactions will be faster

D. Your ability to judge speed will be reduced

37. What does the solid white line at the side of the road indicate?

A. Traffic lights ahead

B. Edge of the carriageway

C. Footpath on the left

D. Cycle path

38. You're driving towards this level crossing. What would be the first warning of an approaching train?

A. Both half-barriers down

B. A steady amber light

C. One half-barrier down

D. Twin flashing red lights

39. You're behind this cyclist. When the traffic lights change, what should you do?

A. Try to move off before the cyclist

B. Allow the cyclist time and room

C. Turn right but give the cyclist room

D. Tap your horn and drive through first

40. You intend to turn left at the traffic lights. What should you do just before turning?

A. Check for bicycles on your left

B. Move out to the right

C. Move up closer to the car ahead

D. Check your right mirror

41. Why should you reduce your speed here?

A. A low bridge is ahead

B. The road narrows ahead

C. The road surface changes ahead

D. A staggered junction is ahead

42. What might you expect to happen in this situation?

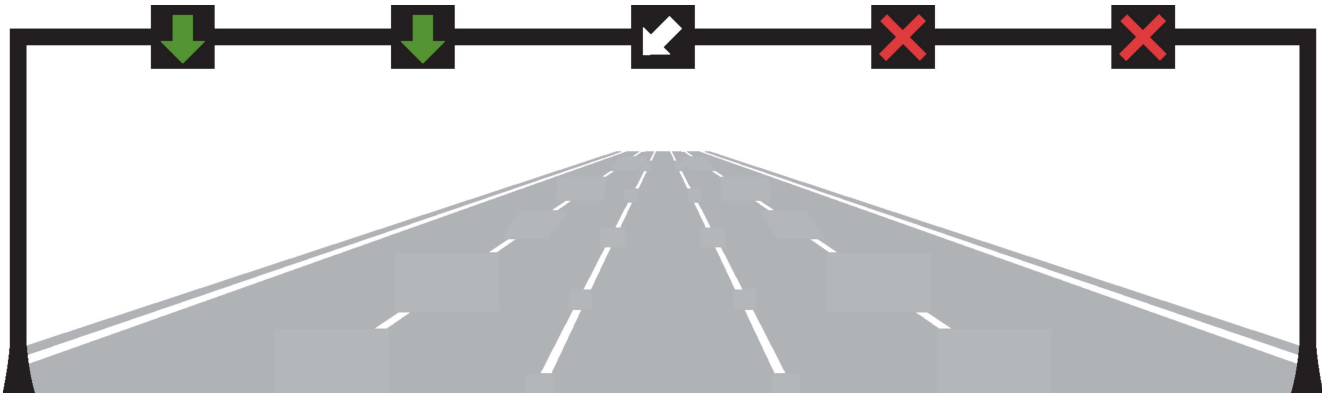

A. Traffic speed will increase

B. Traffic won't need to change position

C. Traffic will move into the left-hand lane

D. Traffic will move into the right-hand lane

43. You're driving on a road with several lanes. What do these signs above the lanes mean?

A. The two left lanes are open

B. Traffic in the right lanes should stop

C. Traffic in the left lanes should stop

D. The two right lanes are open

44. You're invited to a pub lunch. What should you do if you know that you'll have to drive in the evening?

A. Don't drink any alcohol at all

B. Eat a hot meal with your alcoholic drinks

C. Have some milk before drinking alcohol

D. Avoid mixing your alcoholic drinks

45. What will become more expensive after you've been convicted of driving while unfit through drink or drugs?

A. Insurance premiums

B. Driving licence

C. Vehicle test certificate

D. Road fund licence

46. What advice should you give to a driver who has had a few alcoholic drinks at a party?

A. Drive home carefully and slowly

B. Wait a short while and then drive home

C. Go home by public transport

D. Have a strong cup of coffee and then drive home

47. What should you do about driving if you've been taking medicine that causes drowsiness?

A. Only drive if your journey is necessary

B. Avoid driving and check with your doctor

C. Ask someone to come with you

D. Drive on quiet roads

48. What should you do if a doctor prescribes drugs that are likely to affect your driving?

A. Only drive if someone is with you

B. Never drive at more than 30 mph

C. Get someone else to drive

D. Avoid driving on motorways

49. What must you do if your ability to drive is impaired during a period of illness?

A. Take smaller doses of any medicines

B. Take all your medicines with you when you drive

C. Stop driving until you're fit to drive again

D. See your doctor each time before you drive

50. What should you do if you begin to feel drowsy while you're driving?

A. Turn the heater up to keep you warm and comfortable

B. Continue with your journey but drive more slowly

C. Close the car windows to help you concentrate

D. Stop and rest as soon as possible

51. What should you do if you become tired while you're driving on a motorway?

A. Leave the motorway at the next exit and rest

B. Close all your windows and set the heating to warm

C. Increase your speed and turn up the radio volume

D. Pull up on the hard shoulder and change drivers

52. You're about to drive home. What should you do if you feel very tired and have a severe headache?

A. Drive home, but take a tablet for headaches

B. Wait for a short time, then drive home slowly

C. Drive home if you can stay awake for the journey

D. Wait until you're fit and well before driving

53. What can you do to help prevent tiredness on a long journey?

A. Take regular refreshment breaks

B. Complete the journey without stopping

C. Play loud music in the car

D. Eat a large meal before driving

54. You take some cough medicine given to you by a friend. What should you do before driving your car?

A. Drink some strong coffee one hour before driving

B. Drive a short distance to see if the medicine is affecting your driving

C. Check the label to see if the medicine will affect your driving

D. Ask your friend if taking the medicine affected their driving

55. You're driving on a one-way street. What should you do if you realise you've taken the wrong route?

A. Turn around in a side road

B. Reverse into a driveway

C. Continue and find another route

D. Reverse out of the road

56. What will be a serious distraction while you're driving?

A. Switching on your demister

B. Looking in your door mirror

C. Using your windscreen washers

D. Looking at road maps

57. What should you do if the vehicle starts reversing off the driveway?

A. Drive through as you have priority

B. Speed up and drive through quickly

C. Sound your horn and be prepared to stop

D. Move to the opposite side of the road

58. You've been involved in an argument that's made you feel angry. What should you do before starting your journey?

A. Have an alcoholic drink

B. Calm down

C. Turn on your radio

D. Open a window

59. You're driving on this dual carriageway. Why may you need to slow down?

A. There's a broken white line in the centre

B. There are no footpaths

C. There are roadworks ahead of you

D. There are solid white lines on either side

60. You've just been overtaken by this motorcyclist. What should you do if the rider cuts in sharply?

A. Brake firmly

B. Flash your lights

C. Keep a safe gap

D. Sound the horn

61. You're about to drive your car. What should you do if you can't find the glasses you need to wear?

A. Borrow a friend’s glasses and use those

B. Find a way of getting home without driving

C. Drive home at night, so that the lights will help you

D. Drive home slowly, keeping to quiet roads

62. How does drinking alcohol affect your driving behaviour?

A. It increases confidence

B. It increases concentration

C. It leads to faster reactions

D. It improves judgement skills

63. Why should you check the information leaflet before taking any medicine?

A. You may have to let your insurance company know about the medicine

B. The medicine you take may affect your hearing

C. Some types of medicine can affect your ability to drive safely

D. Drug companies want customer feedback on their products

64. You need glasses to read a vehicle number plate at the required distance. When must you wear them?

A. Whenever you're driving

B. Only at night time

C. When you think it's necessary

D. Only in bad weather conditions

65. Which type of glasses would make driving at night more difficult?

A. Round

B. Tinted

C. Bifocal

D. Half-moon

66. What can seriously reduce your ability to concentrate?

A. Busy roads

B. Weather conditions

C. Tinted windows

D. Drugs

67. What must you do if your eyesight has become very poor and you're no longer able to meet the driver's eyesight requirements?

A. Tell your doctor

B. Tell your optician

C. Tell the police

D. Tell the driver licensing authority

68. When should you use hazard warning lights?

A. When you're double-parked on a two-way road

B. When your vehicle has broken down and is causing an obstruction

C. When warning oncoming traffic that you intend to stop

D. When your direction indicators aren't working

69. You want to turn left at this junction. What should you do if your view of the main road is restricted?

A. Stay well back and wait to see if anything comes

B. Approach slowly and edge out until you can see more clearly

C. Stop and apply the parking brake even if the road is clear

D. Build up your speed so that you can emerge quickly

70. You're driving a car fitted with automatic transmission. When would you use ‘kick-down’?

A. To accelerate quickly

B. To improve fuel economy

C. To brake progressively

D. To engage cruise control

71. What should you do if it's raining and you're following this lorry on a motorway?

A. Switch your headlights onto main beam

B. Be aware of spray reducing your vision

C. Move into a lane that has less spray

D. Allow a two-second separation gap

72. You're driving towards this left-hand bend. What danger should you be anticipating?

A. Mud on the road

B. Pedestrians walking towards you

C. The road getting narrower

D. A vehicle overtaking you

73. What should you do if the traffic in the left-hand lane is slowing?

A. Accelerate past the vehicles in the left-hand lane

B. Move across and continue in the right-hand lane

C. Pull up on the left-hand verge

D. Slow down, keeping a safe separation distance

74. When may you use hazard warning lights?

A. When you're double-parked on a two-way road

B. When warning oncoming traffic that you intend to stop

C. When your direction indicators aren't working

D. When driving on a motorway to warn traffic behind of a hazard ahead

75. You're waiting to emerge at a junction. Your view is restricted by parked vehicles. What can help you to see traffic on the road you're joining?

A. Reflections of traffic in windows

B. Checking for traffic in your interior mirror

C. Making eye contact with other road users

D. Looking for traffic behind you

76. What must you do if poor health affects your driving?

A. Inform your local police

B. Inform the licensing authority

C. Always drive accompanied

D. Avoid using motorways

77. Why should the junction on the left be kept clear?

A. To allow vehicles to enter and emerge

B. To allow the bus to reverse

C. To allow vehicles to make a U-turn

D. To allow vehicles to park

78. What should you do if you start to feel drowsy while you're driving on a motorway?

A. Stop on the hard shoulder for a sleep

B. Speed up to arrive at your destination sooner

C. Slow down and let other drivers overtake

D. Open a window and stop as soon as it’s safe and legal

Answers

1. C - On a large goods vehicle

These markers must be fitted to vehicles over 13 metres long, heavy goods vehicles, and rubbish skips placed in the road. They're reflective to make them easier to see in the dark.

2. C - The cyclist crossing the road

Look at the picture carefully and try to imagine you're there. The cyclist in this picture appears to be trying to cross the road. You must be able to deal with the unexpected, especially when you're approaching a hazardous junction. Look well ahead to give yourself time to deal with any hazards.

3. D - The parked car (arrowed A)

The car arrowed A is parked within the area marked by zigzag lines at the pedestrian crossing. Parking here is illegal. It also • blocks the view for pedestrians wishing to cross the road • restricts the view of the crossing for approaching traffic.

4. B - Slow down and get ready to stop

Look well ahead to see whether any hazards are developing. This will give you more time to deal with them in the correct way. The man in the picture is clearly intending to cross the road. You should be travelling at a speed that allows you to check your mirror, slow down and stop in good time. You shouldn't have to brake harshly.

5. C - Doors opening on parked cars

When passing parked cars, there's a risk that a driver or passenger may not check before opening the door into the road. A defensive driver will drive slowly and be looking for people who may be about to get out of their car.

6. C - The road will bend sharply to the left

This sign indicates that the road will bend sharply to the left. Slow down in plenty of time and select the correct gear before you start to turn. Braking hard and late, while also sharply changing direction, is likely to cause a skid.

7. C - Slow down and allow the cyclist to turn

Keep well back and give the cyclist time and room to turn safely. Don’t intimidate them by getting too close or trying to squeeze past.

8. B - The view is restricted

You may have to pull forward slowly until you can see up and down the road. Be aware that the traffic approaching the junction can’t see you either. If you don’t know that it’s clear, don’t go.

9. C - Buses

A bus or high-sided lorry will have to take a position in the centre of the road to clear the bridge. There's normally a sign to show this. Look well ahead, past the bridge and be ready to stop and give way to large oncoming vehicles.

10. A - Lorry

The highest point of the bridge is in the centre, so a large vehicle might have to move to the centre of the road to have enough room to pass safely under the bridge.

11. D - Stop behind the line, then edge forward to see clearly

The ‘stop’ sign has been put here because the view into the main road is poor. You must stop because it won't be possible to take proper observation while you're moving.

12. D - Ignore the error and stay calm

Be tolerant if a vehicle emerges and you have to brake quickly. Anyone can make a mistake, so don’t react aggressively. Be alert where there are side roads and be especially careful where there are parked vehicles, because these can make it difficult for emerging drivers to see you.

13. C - Older drivers reactions may be slower than other drivers

As people age, their reaction time gets slower. The rate of decline varies from person to person but you can expect them to take longer to react to a hazard and they may be hesitant in some situations – for example, at a junction.

14. A - Yes, regular stops help concentration

Try to plan your journey so that you can take rest stops. It’s recommended that you take a break of at least 15 minutes after every two hours of driving or riding. This should help to maintain your concentration.

15. C - Stop before the barrier

At level crossings, the red lights flash before and while the barrier is down. At most crossings, an amber light will precede the red lights. You must stop behind the white line unless you've already crossed it when the amber light comes on. Don't be tempted to zigzag around half-barriers.

16. B - Be prepared to stop for any traffic

When approaching a junction where the traffic lights have failed, you should proceed with caution. Treat the situation as an unmarked junction and be prepared to stop.

17. D - Wait for the pedestrian in the road to cross

Some people might take a long time to cross the road. They may be older or have a disability. Be patient and don't hurry them by showing your impatience. If pedestrians are standing at the side of the road, don't signal or wave them to cross. Other road users might not have seen your signal and this could lead the pedestrians into a hazardous situation.

18. D - Only consider overtaking when you're past the junction

You should never overtake as you approach a junction. If a vehicle emerged from the junction while you were overtaking, a dangerous situation could develop very quickly.

19. C - Be prepared to give way to large vehicles in the middle of the road

Oncoming large vehicles may need to move to the middle of the road to pass safely under the bridge. There won't be enough room for you to continue, so you should be ready to stop and wait.

20. D - They give a wider field of vision

Although a convex mirror gives a wide view of the scene behind, you should be aware that it won't show you everything behind or to the side of your vehicle. Before you move off, you'll need to look over your shoulder to check for anything not visible in the mirrors.

21. B - Approach with care and overtake on the left of the lorry

This sign is found on slow-moving or stationary works vehicles. If you wish to overtake it, do so on the left, as indicated. Be aware that there might be people working in the area.

22. B - Stay behind and don't overtake

Be cautious and don’t attempt to overtake. The driver may be unsure of the location of a junction and may turn suddenly.

23. C - The bus may move out into the road

If you can do so safely, give way to buses signalling to move off at bus stops. Try to anticipate the actions of other road users around you. The driver of the red car should be prepared for the bus pulling out. As you approach a bus stop, look to see how many passengers are waiting to board. If the last one has just got on, the bus is likely to move off.

24. A - A school bus

Buses which carry children to and from school may stop at places other than scheduled bus stops. Be aware that they might pull over at any time to allow children to get on or off. This will normally be when traffic is heavy during rush hour.

25. C - Children running out between vehicles

On roads where there are many parked vehicles, you might not be able to see children between parked cars and they may run out into the road without looking.

26. A - The cyclist may swerve into the road

When following a cyclist, be aware that they have to deal with the hazards around them. They may wobble or swerve to avoid a pothole in the road or see a potential hazard and change direction suddenly. Don’t follow them too closely or rev your engine impatiently.

27. A - Stop and take a break

If you feel yourself becoming tense or upset, stop in a safe place and take a break. Tiredness can make things worse and may cause a different reaction to upsetting situations.

28. A - At a reduced speed

Traffic-calming measures such as road humps, chicanes and narrowings are intended to slow traffic down to protect vulnerable road users. Don't speed up until you reach the end of the traffic-calmed zone.

29. D - Because of the level crossing

You should be slowing down and selecting the correct gear in case you have to stop at the level crossing. Look for the signals and be prepared to stop if necessary.

30. C - To help you select the correct lane in good time

The names of towns and cities may be painted on the road at busy junctions and complex road systems. They guide you into the correct lane in good time, allowing traffic to flow more freely.

31. D - Traffic in both directions can use the middle lane to overtake

If you intend to overtake, you must consider that approaching traffic could be planning the same manoeuvre. When you've considered the situation and decided it's safe, indicate your intentions early. This will show the approaching traffic that you intend to pull out.

32. B - A tractor

An amber flashing beacon on a vehicle indicates that it's moving slowly or stopped and a possible hazard. Look well ahead on a dual carriageway and you should be able to see and respond to these vehicles in good time.

33. A - Stop

Police officers may need to direct traffic; for example, at a junction where the traffic lights have broken down. Check your copy of The Highway Code for the signals that they use.

34. C - People may cross the road in front of it

A bus at a bus stop can hide pedestrians who might try to cross the road just in front of it. Drive at a speed that will enable you to respond safely if you have to.

35. C - Approaching a junction

You should overtake only when it's really necessary and you can see it’s clear ahead. Look out for road signs and markings that show it's illegal or would be unsafe to overtake; for example, approaching junctions or bends. In many cases, overtaking is unlikely to significantly improve your journey time.

36. D - Your ability to judge speed will be reduced

Alcohol will severely reduce your ability to drive or ride safely and there are serious consequences if you’re caught over the drink-drive limit. It's known that alcohol can • affect your judgement • cause overconfidence • reduce coordination and control.

37. B - Edge of the carriageway

The continuous white line shows the edge of the carriageway. It can be especially useful when visibility is restricted, such as at night or in bad weather. It's discontinued in some places; for example, at junctions, lay-bys, entrances or other openings.

38. B - A steady amber light

The steady amber light will be followed by twin flashing red lights that mean you must stop. An alarm will also sound to alert you to the fact that a train is approaching.

39. B - Allow the cyclist time and room

Hold back and allow the cyclist to move off. Some junctions have special areas marked across the front of the traffic lane. These allow cyclists to wait for the lights to change and move off ahead of other traffic.

40. A - Check for bicycles on your left

If you've been in a queue of traffic and are about to turn left, check your nearside for cyclists as they often filter past on the nearside of slow-moving or stationary vehicles.

41. D - A staggered junction is ahead

Traffic could be turning off or pulling out ahead of you, to the left or right. Vehicles turning left will be slowing down before the junction, and any vehicles turning right may have to stop to allow oncoming traffic to clear. Be prepared for this, as you might have to slow down or stop behind them.

42. C - Traffic will move into the left-hand lane

Be courteous and allow the traffic to merge into the left-hand lane.

43. A - The two left lanes are open

On some busy roads, lane control signals are used to vary the number of lanes available to give priority to the main traffic flow. A green arrow indicates that the lane is available to traffic facing the signal. A white diagonal arrow means that the lane is closed ahead and traffic should move to the next lane on the left. A red cross means that the lane is closed to traffic facing the signal.

44. A - Don't drink any alcohol at all

Alcohol will stay in your body for several hours and may make you unfit to drive later in the day. Drinking during the day will also affect your performance at work or study.

45. A - Insurance premiums

You've shown that you're a risk to yourself and others on the road. For this reason, insurance companies may charge you a higher premium.

46. C - Go home by public transport

Drinking black coffee or waiting a few hours won't make any difference. Alcohol takes time to leave the body. A driver who has been drinking should go home by public transport or taxi. They might even be unfit to drive the following morning.

47. B - Avoid driving and check with your doctor

You aren't fit to drive if you're taking medicine that makes you drowsy. Check with your doctor if you're unsure. You mustn't put other road users, your passengers or yourself at risk.

48. C - Get someone else to drive

You shouldn't drive if you're taking medicine that could cause you to feel drowsy at the wheel. Ask someone else to drive or, if that isn't possible, find another way to get home.

49. C - Stop driving until you're fit to drive again

Only drive if you're fit to do so. Driving when you're ill or taking some medicines can affect your concentration and judgement. It may also cause you to become drowsy or even fall asleep.

50. D - Stop and rest as soon as possible

You'll be putting other road users at risk if you continue to drive when you're drowsy. Pull over and stop in a safe place for a rest. If you're driving a long distance, think about finding some accommodation so you can rest for longer before continuing your journey.

51. A - Leave the motorway at the next exit and rest

If you feel yourself becoming tired or sleepy, you should leave the motorway at the next exit or services and stop for a rest. If you have to drive a long way, leave earlier and plan your journey to include rest stops. That way, you're less likely to become tired while driving and you'll still arrive in good time.

52. D - Wait until you're fit and well before driving

All of your concentration should be on your driving. Any pain you feel will distract you, and you should avoid driving when drowsy. The safest course of action is to wait until you've rested and are feeling better before starting your journey.

53. A - Take regular refreshment breaks

Long-distance driving can be boring. This, coupled with a stuffy, warm vehicle, can make you feel tired and sleepy. Make sure you take rest breaks to help you stay awake and alert. Stop in a safe place before you get to the stage of fighting sleep.

54. C - Check the label to see if the medicine will affect your driving

If you've taken medicine, never drive without first checking what the side effects might be; they might affect your judgement and perception, and therefore endanger lives.

55. C - Continue and find another route

Never reverse or turn your vehicle around in a one-way street. It's illegal and could even cause a collision. If you've taken a wrong turn, carry on along the one-way street and find another route, checking the direction signs as you drive. Stop in a safe place if you need to check a map.

56. D - Looking at road maps

Looking at road maps while driving is very dangerous. If you aren’t sure of your route, stop in a safe place and check the map. You must not allow anything to take your attention away from the road while you’re driving.

57. C - Sound your horn and be prepared to stop

White lights at the rear of a car show that the driver has selected reverse gear. The driver is hidden from view so can't see you approaching. Sound your horn to warn of your presence, and be ready to stop if the car reverses into your path.

58. B - Calm down

If you're feeling upset or angry, you'll find it much more difficult to concentrate on your driving. You should wait until you've calmed down before starting a journey.

59. C - There are roadworks ahead of you

Look well ahead and read any road signs as you drive. They're there to inform you of what's ahead. In this case, you may need to slow down and change direction. Check your mirrors so you know what's happening around you before you change speed or direction.

60. C - Keep a safe gap

If another vehicle cuts in sharply, ease off the accelerator and drop back to allow a safe separation distance. Try not to overreact by braking sharply or swerving, as you could lose control. If vehicles behind you are too close or unprepared, it could lead to a crash.

61. B - Find a way of getting home without driving

If you need to wear glasses for driving, it's illegal to drive without them. You must be able to see clearly when you're driving.

62. A - It increases confidence

Alcohol can increase confidence to a point where your driving behaviour might become ‘out of character’. Sensible behaviour might change to risk-taking behaviour. Never let yourself or your friends get into this situation.

63. C - Some types of medicine can affect your ability to drive safely

Always check the label or information leaflet for any medication you take. The medicine might affect your driving. If you aren’t sure, ask your doctor or pharmacist.

64. A - Whenever you're driving

Have your eyesight tested before you start your practical training. Then, throughout your driving life, have checks periodically, as your vision may change.

65. B - Tinted

If you're driving at night or in poor visibility, tinted lenses will reduce the efficiency of your vision by reducing the amount of light reaching your eyes.

66. D - Drugs

Both recreational drugs and prescribed medicine can affect your concentration. It's also an offence to drive with certain drugs in your body and a positive test could lead to a conviction.

67. D - Tell the driver licensing authority

Having very poor eyesight will have a serious effect on your ability to drive safely. If you can't meet the driver's eyesight requirements, you must tell DVLA (or DVA in Northern Ireland).

68. B - When your vehicle has broken down and is causing an obstruction

Hazard warning lights are an important safety feature and should be used if you've broken down and are causing an obstruction. Don’t use them as an excuse to park illegally. You may also use them on motorways to warn traffic behind you of danger ahead.

69. B - Approach slowly and edge out until you can see more clearly

You should slow right down, and stop if necessary, at any junction where your view is restricted. Edge forward until you can see properly. Only then can you decide whether it's safe to go.

70. A - To accelerate quickly

‘Kick-down’ selects a lower gear, enabling the vehicle to accelerate faster.

71. B - Be aware of spray reducing your vision

The usual two-second time gap increases to four seconds when the roads are wet. If you stay well back, you’ll • be able to see past the vehicle • be out of the spray thrown up by the lorry’s tyres • give yourself more time to stop if the need arises • increase your chances of being seen by the lorry driver.

72. B - Pedestrians walking towards you

Pedestrians walking on a road with no pavement should walk against the direction of the traffic. You can’t see around this bend and if pedestrians are in the road you need to be able to deal with the situation safely. Always keep this in mind and give yourself time to react if a hazard does appear.

73. D - Slow down, keeping a safe separation distance

Allow the traffic to merge into the left-hand lane. Leave enough room so that you can maintain a safe separation distance, even if vehicles pull in ahead of you.

74. D - When driving on a motorway to warn traffic behind of a hazard ahead

Hazard warning lights are an important safety feature. Use them when driving on a motorway to warn traffic behind you of danger ahead. You should also use them if your vehicle has broken down and is causing an obstruction.

75. A - Reflections of traffic in windows

You must be completely sure it's safe to emerge. Try to look for traffic through the windows of the parked cars or in the reflections in windows. Keep looking in all directions as you slowly edge forwards until you can see it's safe.

76. B - Inform the licensing authority

You must tell DVLA (or DVA in Northern Ireland) if your health is likely to affect your ability to drive. The licensing authority will investigate your situation and then make a decision on whether you're fit enough to drive safely.

77. A - To allow vehicles to enter and emerge

You should always try to keep junctions clear. If you're in queuing traffic, make sure that when you stop you leave enough space for traffic to flow in and out of the junction.

78. D - Open a window and stop as soon as it’s safe and legal

Never stop on the hard shoulder to rest. If there's no service area for several miles, leave the motorway at the next exit and find somewhere safe and legal to pull over.
