1. When are you allowed to use hazard warning lights?

A. When stopped and temporarily obstructing traffic

B. When travelling slowly because you're lost

C. When parked on double yellow lines to visit a shop

D. When travelling during darkness without headlights

2. What should you do if you have to stop while you're going through a congested tunnel?

A. Pull up very close to the vehicle in front to save space

B. Ignore any message signs, as they're never up to date

C. Keep a safe distance from the vehicle in front

D. Make a U-turn and find another route

3. You arrive at the scene of a crash where someone is bleeding heavily from a wound in their arm. Nothing is embedded in the wound. What could you do to help?

A. Apply pressure over the wound

B. Walk them around and keep them talking

C. Dab the wound

D. Get them a drink

4. You're at an incident. What could you do to help an unconscious casualty?

A. Take photographs of the scene

B. Check that they're breathing normally

C. Move them to somewhere more comfortable

D. Splash their face with cool water

5. A casualty isn't breathing normally and needs CPR. At what rate should you press down and release on the centre of their chest?

A. 10 times per minute

B. 120 times per minute

C. 60 times per minute

D. 240 times per minute

6. Following a collision, a person has been injured. What would be a warning sign for shock?

A. Flushed complexion

B. Warm dry skin

C. Slow pulse

D. Rapid shallow breathing

7. An injured person has been placed in the recovery position. They're unconscious but breathing normally. What else should be done?

A. Press firmly between their shoulders

B. Check their airway remains open

C. Give them a hot sweet drink

D. Place their arms by their side

8. An injured motorcyclist is lying unconscious in the road. The traffic has stopped and there's no further danger. What could you do to help?

A. Seek medical assistance

B. Remove their leather jacket

C. Move the person off the road

D. Remove their safety helmet

9. What should you do if you see a large box fall from a lorry onto the motorway?

A. Pull over to the hard shoulder, then remove the box

B. Go to the next emergency telephone and report the hazard

C. Stop close to the box until the police arrive

D. Catch up with the lorry and try to get the driver's attention

10. You're going through a long tunnel. What will warn you of congestion or an incident ahead?

A. Hazard warning lines

B. Areas with hatch markings

C. Variable message signs

D. Other drivers flashing their lights

11. An adult casualty isn't breathing. To maintain circulation, CPR should be given. What's the correct depth to press down on their chest?

A. 10 to 15 centimetres

B. 15 to 20 centimetres

C. 1 to 2 centimetres

D. 5 to 6 centimetres

12. You're the first person to arrive at an incident where people are badly injured. You've switched on your hazard warning lights and checked all engines are stopped. What else should you do?

A. Make sure that an ambulance has been called

B. Move the people who are injured clear of their vehicles

C. Try and get people who are injured to drink something

D. Stop other cars and ask the drivers for help

13. You arrive at the scene of a motorcycle crash. The rider is injured. When should their helmet be removed?

A. Always straight away

B. Only when the motorcyclist asks

C. Always, unless they're in shock

D. Only when it's essential

14. You arrive at an incident. There's no danger from fire or further collisions and the emergency services have been called. What's your first priority when attending to an unconscious motorcyclist?

A. Check whether they have any broken bones

B. Check whether they're bleeding

C. Check whether they're breathing normally

D. Check whether they have any bruising

15. At an incident, someone is unconscious and you want to help. What would be the first thing to check?

A. Whether their airway is open

B. Whether they have any allergies

C. Whether their vehicle is insured

D. Whether they're comfortable

16. What could you do to help injured people at an incident?

A. Give them something to eat

B. Keep them on the move by walking them around

C. Give them a warm drink

D. Keep them warm and comfortable

17. There's been a collision. How can you help a driver who's suffering from shock?

A. Ask who caused the incident

B. Offer them a cigarette

C. Give them a drink

D. Reassure them confidently

18. You arrive at the scene of a motorcycle crash. No other vehicle is involved. The rider is unconscious and lying in the middle of the road. What's the first thing you should do at the scene?

A. Warn other traffic

B. Move the rider out of the road

C. Give the rider reassurance

D. Clear the road of debris

19. At an incident, how could you help a small child who isn't breathing?

A. Open their airway and begin CPR

B. Find their parents and explain what's happening

C. Talk to them confidently until an ambulance arrives

D. Put them in the recovery position and slap their back

20. At an incident, a casualty isn't breathing. What should you do while helping them to start breathing again?

A. Put their arms across their chest

B. Shake them firmly

C. Roll them onto their side

D. Open their airway

21. At an incident, someone is suffering from severe burns. How could you help them?

A. Douse the burns with clean, cool water

B. Burst any blisters

C. Apply lotions to the injury

D. Remove anything sticking to the burns

22. You arrive at an incident. A pedestrian is bleeding heavily from a leg wound. The leg isn't broken and there's nothing in the wound. How could you help?

A. Apply firm pressure over the wound

B. Dab the wound to stop the bleeding

C. Keep the casualty's legs flat on the ground

D. Give them a warm drink

23. At an incident, a casualty is unconscious but breathing. When should you move them?

A. When bystanders offer to help you

B. When an ambulance is on its way

C. When bystanders tell you to move them

D. When there's a risk of further danger

24. At an incident, it's important to look after any casualties. What should you do with them when the area is safe?

A. Give them something to eat

B. Move them away from the vehicles

C. Ask them how it happened

D. Keep them where they are

25. Which sign shows that a tanker is carrying dangerous goods?

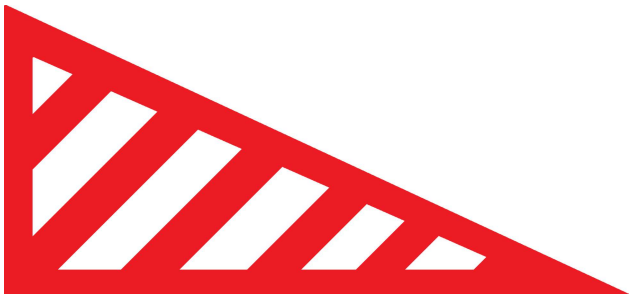

A.

B.

C.

D.

26. Which document may the police ask you to produce after you've been involved in a collision?

A. Your vehicle registration document

B. Your vehicle service record

C. Your theory test certificate

D. Your driving licence

27. After a collision, someone is unconscious in their vehicle. When should you call the emergency services?

A. Only as a last resort

B. After checking for broken bones

C. After you've woken them up

D. As soon as possible

28. A collision has just happened. An injured person is lying in a busy road. What's the first thing you should do?

A. Treat the person for shock

B. Make sure the injured person is kept warm

C. Place them in the recovery position

D. Warn other traffic

29. At an incident, how could you help a casualty who has stopped breathing?

A. Follow the DR ABC code

B. Try to give them something to drink

C. Raise their legs to help with circulation

D. Keep their head tilted forwards as far as possible

30. You’re at the scene of an incident. How could you help someone who's suffering from shock?

A. Reassure them confidently

B. Offer them a cigarette

C. Give them a warm drink

D. Offer them some food

31. There's been a collision. A motorcyclist is lying injured and unconscious. Why should you only remove their helmet if it’s essential?

A. They might not want you to remove it

B. You could scratch the helmet as you remove it

C. Removing it could let them get cold

D. Removing it could make any injuries worse

32. You're on a motorway. When can you use hazard warning lights?

A. When a vehicle is following too closely

B. When you're using the hard shoulder as a running lane

C. When you're being towed by another vehicle

D. When you slow down quickly because of danger ahead

33. You've broken down on a two-way road. You have a warning triangle. At least how far from your vehicle should you place the warning triangle?

A. 25 metres (82 feet)

B. 100 metres (328 feet)

C. 45 metres (147 feet)

D. 5 metres (16 feet)

34. Your car breaks down on a level crossing. What's the first thing you should do?

A. Stay in your car until you're told to move

B. Tell drivers behind what's happened

C. Leave your vehicle and get everyone clear

D. Walk down the track and signal the next train

35. What should you do if a tyre bursts while you’re driving?

A. Continue on at a normal speed

B. Pull on the parking brake

C. Brake as quickly as possible

D. Pull up slowly at the side of the road

36. What should you do if your vehicle has a puncture on a motorway?

A. Drive slowly to the next service area to get assistance

B. Switch on your hazard warning lights. Stop in your lane

C. Pull up on the hard shoulder or in an emergency refuge area and call for assistance

D. Pull up on the hard shoulder or in an emergency refuge area. Change the wheel as quickly as possible

37. Your vehicle has stalled in the middle of a level crossing. What should you do if the warning bells start to ring while you're trying to restart the engine?

A. Push the vehicle clear of the crossing

B. Get out of the car and clear of the crossing

C. Run down the track to warn the signal operator

D. Carry on trying to restart the engine

38. What should you do before driving into a tunnel?

A. Take off your sunglasses

B. Switch off your radio

C. Close your sunroof

D. Switch on your windscreen wipers

39. Which lights should you use when you're driving in a tunnel?

A. Rear fog lights

B. Sidelights

C. Front spotlights

D. Dipped headlights

40. What should you do to reduce the risk of your vehicle catching fire?

A. Avoid driving with a full tank of fuel

B. Keep water levels above maximum

C. Check out any strong smell of fuel

D. Use fuel additives

41. You're driving on the motorway. What should you do if luggage falls from your vehicle?

A. Walk back up the motorway to pick it up

B. Stop at the next emergency telephone and report the incident

C. Stop on the motorway and switch on hazard warning lights while you pick it up

D. Pull up on the hard shoulder and wave traffic down

42. What should you do if an instrument panel warning light comes on while you're driving?

A. Deal with the problem when there's more time

B. Continue if the engine sounds all right

C. Hope that it's just a temporary electrical fault

D. Check out the problem quickly and safely

43. What should you do if your vehicle breaks down in a tunnel?

A. Switch on hazard warning lights, then go and call for help

B. Stand in front of your vehicle to warn oncoming drivers

C. Stand in the lane behind your vehicle to warn others

D. Stay in your vehicle and wait for the police

44. What should you do if your vehicle catches fire while you're driving through a tunnel?

A. Leave it where it is, with the engine running

B. Drive it out of the tunnel if it's safe to do so

C. Park it away from the carriageway

D. Pull up, then walk to an emergency telephone

45. What should you do first if your vehicle has broken down on an automatic railway level crossing?

A. Get everyone out of the vehicle and clear of the crossing

B. Telephone your vehicle recovery service to move it

C. Walk along the track to give warning to any approaching trains

D. Try to push the vehicle clear of the crossing as soon as possible

46. What's the first thing you must do if you have a collision while you're driving your car?

A. Stop at the scene of the incident

B. Call your insurance company

C. Call the emergency services

D. Stop only if someone waves at you

47. What information should you share if you’re involved in a collision that causes damage to another vehicle?

A. Your name, address and vehicle registration number

B. Your national insurance number

C. Your occupation and reason for your journey

D. Your internet service provider

48. You lose control of your car and damage a garden wall. What must you do if the property owner isn't available?

A. Report the incident to your insurance company when you get home

B. Report the incident to the police within 24 hours

C. Go back to tell the house owner the next day

D. Find someone in the area to tell them about it immediately

Answers

1. A - When stopped and temporarily obstructing traffic

You mustn't use hazard warning lights while moving, except to warn traffic behind when you slow suddenly on a motorway or unrestricted dual carriageway. Never use hazard warning lights to excuse dangerous or illegal parking.

2. C - Keep a safe distance from the vehicle in front

It’s important to keep a safe distance from the vehicle in front at all times. This still applies in congested tunnels, even if you're moving very slowly or have stopped. If the vehicle in front breaks down, you may need room to manoeuvre past it.

3. A - Apply pressure over the wound

If possible, lay the casualty down. Protect yourself from exposure to blood and, when you're sure there's nothing in the wound, apply firm pressure using clean material.

4. B - Check that they're breathing normally

If a casualty is unconscious, you need to check that they're breathing normally. Look for chest movements, look and listen for breathing, and feel for breath on your cheek.

5. B - 120 times per minute

If a casualty isn't breathing normally, cardiopulmonary resuscitation (CPR) may be needed to maintain circulation. Place two hands on the centre of the chest and press down hard and fast – around 5–6 centimetres and about twice a second.

6. D - Rapid shallow breathing

The effects of shock may not be immediately obvious. Warning signs to look for include • a rapid pulse • sweating • pale grey skin • rapid shallow breathing.

7. B - Check their airway remains open

After a casualty has been placed in the recovery position, make sure their airway remains open and monitor their condition until medical help arrives. Where possible, don't move a casualty unless there’s further danger.

8. A - Seek medical assistance

If someone has been injured, the sooner proper medical attention is given the better. Ask someone to phone for help or do it yourself. An injured person should only be moved if they’re in further danger. An injured motorcyclist’s helmet shouldn't be removed unless it's essential.

9. B - Go to the next emergency telephone and report the hazard

Lorry drivers can be unaware of objects falling from their vehicles. If you see something fall onto a motorway, look to see if the driver pulls over. If they don't stop, don't attempt to retrieve the object yourself. Pull onto the hard shoulder near an emergency telephone and report the hazard.

10. C - Variable message signs

Follow the instructions given by the signs or by tunnel officials. In congested tunnels, a minor incident can soon turn into a major one, with serious or even fatal results.

11. D - 5 to 6 centimetres

An adult casualty isn't breathing normally. To maintain circulation, place two hands on the centre of the chest. Then press down hard and fast – around 5–6 centimetres and about twice a second.

12. A - Make sure that an ambulance has been called

If you’re the first to arrive at a crash scene, the first concerns are the risk of further collision and fire. Ensuring that vehicle engines are switched off will reduce the risk of fire. Use hazard warning lights so that other traffic knows there’s a need for caution. Make sure the emergency services are contacted; don’t assume it's already been done.

13. D - Only when it's essential

Don't remove a motorcyclist's helmet unless it's essential. Remember they may be suffering from shock. Don't give them anything to eat or drink, but do reassure them confidently.

14. C - Check whether they're breathing normally

At the scene of an incident, always be aware of danger from further collisions or fire. The first priority when dealing with an unconscious person is to ensure they can breathe. This may involve clearing their airway if you can see an obstruction or if they’re having difficulty breathing.

15. A - Whether their airway is open

Remember this procedure by saying DR ABC. This stands for Danger, Response, Airway, Breathing, Circulation. Give whatever first aid you can and stay with the injured person until a medical professional takes over.

16. D - Keep them warm and comfortable

There are a number of things you can do to help, even without expert training. Be aware of further danger from other traffic and fire; make sure the area is safe. People may be in shock. Don’t give them anything to eat or drink. Keep them warm and comfortable and reassure them. Don’t move injured people unless there’s a risk of further danger.

17. D - Reassure them confidently

A casualty suffering from shock may have injuries that aren't immediately obvious. Call the emergency services, then stay with the person in shock, offering reassurance until the experts arrive.

18. A - Warn other traffic

The motorcyclist is in an extremely vulnerable position, exposed to further danger from traffic. Approaching vehicles need advance warning in order to slow down and safely take avoiding action or stop. Don't put yourself or anyone else at risk. Use the hazard warning lights on your vehicle to alert other road users to the danger.

19. A - Open their airway and begin CPR

If a young child has stopped breathing, first check that their airway is open and then begin CPR. With a young child, you may only need to use one hand and you shouldn’t press down as far as you would with an adult. Continue the procedure until the child is breathing again or until a medical professional takes over.

20. D - Open their airway

It’s important to ensure that the airway is open before you start CPR. To open the casualty’s airway, place your fingers under their chin and lift it forward.

21. A - Douse the burns with clean, cool water

Your priority is to cool the burns with clean, cool water. Its coolness will help take the heat out of the burns and relieve the pain. Keep the wound doused for at least 20 minutes. If blisters appear, don’t attempt to burst them, as this could lead to infection.

22. A - Apply firm pressure over the wound

You should protect yourself from exposure to blood, and then apply firm pressure over the wound to stem the flow of blood. As soon as practical, fasten a pad to the wound with a bandage or length of cloth. Use the cleanest material available.

23. D - When there's a risk of further danger

Don't move a casualty unless there's further danger; for example, from other traffic or fire. They may have unseen or internal injuries. Moving them unnecessarily could cause further injury. Don't remove a motorcyclist’s helmet unless it’s essential.

24. D - Keep them where they are

When the area is safe and there's no danger from other traffic or fire, it's better not to move casualties. Moving them may cause further injury.

25. A -

Tankers will display a hazard warning plate on the side and rear of the vehicle. Details of hazard warning symbols are given in The Highway Code. If a tanker is involved in a collision, you may need to report the tanker's hazard labelling to the emergency services.

26. D - Your driving licence

You must stop if you've been involved in a collision that results in injury or damage. The police may ask to see your driving licence and insurance details at the time or later at a police station.

27. D - As soon as possible

It's important to make sure that the emergency services arrive as soon as possible. When a person is unconscious, they could have serious injuries that aren't immediately obvious.

28. D - Warn other traffic

The most immediate danger is further collisions and fire. You could warn other traffic by switching on hazard warning lights, displaying an advance warning triangle or sign (but not on a motorway), or by any other means that doesn’t put you or others at risk.

29. A - Follow the DR ABC code

The DR ABC code has been devised by medical experts to give the best outcome until the emergency services arrive and take care of casualties.

30. A - Reassure them confidently

If someone is suffering from shock, try to keep them warm and as comfortable as you can. Don’t give them anything to eat or drink but reassure them confidently and try not to leave them alone.

31. D - Removing it could make any injuries worse

When someone is injured, any movement that isn't absolutely necessary should be avoided, since it could make the injuries worse. Unless it's essential to remove a motorcyclist's helmet, it’s generally safer to leave it in place.

32. D - When you slow down quickly because of danger ahead

Briefly using your hazard warning lights will warn the traffic behind you that there's a hazard ahead. Turn them off again when following drivers have seen and responded to your signal.

33. C - 45 metres (147 feet)

Advance warning triangles fold flat and don’t take up much room. Use one to warn other road users if your vehicle has broken down or if there has been an incident. Place it at least 45 metres (147 feet) behind your vehicle (or the incident), on the same side of the road or verge. Place it further back if the scene is hidden by, for example, a bend, hill or dip in the road. Don’t use warning triangles on motorways.

34. C - Leave your vehicle and get everyone clear

If your vehicle breaks down on a level crossing, your first priority is to get everyone out of the vehicle and clear of the crossing. Then use the railway telephone, if there is one, to tell the signal operator. If you have time before the train arrives, move the vehicle clear of the crossing, but only do this if the alarm signals aren't activated.

35. D - Pull up slowly at the side of the road

A tyre bursting can lead to a loss of control, especially if you’re travelling at high speed. Using the correct procedure should help you to stop the vehicle safely.

36. C - Pull up on the hard shoulder or in an emergency refuge area and call for assistance

Pull up on the hard shoulder or in an emergency area and call for assistance. Don't attempt to repair your vehicle while it's on the hard shoulder, because of the risk posed by traffic passing at high speeds.

37. B - Get out of the car and clear of the crossing

If the warning bells ring, leave the vehicle and get any passengers well clear of the crossing immediately.

38. A - Take off your sunglasses

If you're wearing sunglasses, you should remove them before driving into a tunnel. If you don’t, your vision will be restricted, even in tunnels that appear to be well lit.

39. D - Dipped headlights

Before entering a tunnel, you should switch on your dipped headlights, as this will allow you to see and be seen. In many tunnels, it's a legal requirement. Don’t wear sunglasses while you're driving in a tunnel.

40. C - Check out any strong smell of fuel

The fuel in your vehicle can be a dangerous fire hazard. If you smell fuel, check out where it's coming from. Never • use a naked flame near the vehicle if you can smell fuel • smoke when refuelling your vehicle.

41. B - Stop at the next emergency telephone and report the incident

If any object falls onto the motorway carriageway from your vehicle, pull onto the hard shoulder near an emergency telephone and call for assistance. Don’t stop on the carriageway or attempt to retrieve anything.

42. D - Check out the problem quickly and safely

Make sure you know what the different warning lights mean. An illuminated warning light could mean that your car is unsafe to drive. If you aren’t sure about the problem, get a qualified mechanic to check it.

43. A - Switch on hazard warning lights, then go and call for help

A broken-down vehicle in a tunnel can cause serious congestion and danger to other road users. If your vehicle breaks down, get help without delay. Switch on your hazard warning lights, then go to an emergency telephone to call for help.

44. B - Drive it out of the tunnel if it's safe to do so

If it’s possible, and you can do so without causing further danger, it may be safer to drive a vehicle that's on fire out of a tunnel. The greatest danger in a tunnel fire is smoke and suffocation.

45. A - Get everyone out of the vehicle and clear of the crossing

First, get yourself and anyone else well away from the crossing. If there’s a railway telephone, use that to get instructions from the signal operator. Then, if there’s time, move the vehicle clear of the crossing.

46. A - Stop at the scene of the incident

If you're in a collision that causes damage or injury to any other person, vehicle, animal or property, by law you must stop. Give your name, the vehicle owner’s name and address, and the vehicle’s registration number to anyone who has reasonable grounds for requesting them.

47. A - Your name, address and vehicle registration number

Try to keep calm and don’t rush. Make sure that you've shared all the relevant details with the other driver before you leave the scene. If possible, take pictures and note the positions of all the vehicles involved.

48. B - Report the incident to the police within 24 hours

If the property owner isn't available at the time, you must inform the police about the incident. This should be done as soon as possible, and in any case within 24 hours.
