1. You're joining a motorway from a slip road. How should you deal with traffic already on the motorway?

A. Match your speed to traffic in the left-hand lane and filter into a safe gap

B. Use the slip road to accelerate until you're moving much faster than the motorway traffic

C. Carry on along the hard shoulder until you see a safe gap

D. Stop at the end of the slip road and look for a safe gap

2. What's the national speed limit on motorways for cars and motorcycles?

A. 60 mph

B. 30 mph

C. 50 mph

D. 70 mph

3. Which vehicles should use the left-hand lane on a three-lane motorway?

A. Emergency vehicles only

B. Any vehicle that isn't overtaking

C. Slow vehicles only

D. Large vehicles only

4. Which vehicles aren't allowed to use the right-hand lane of a three-lane motorway?

A. Small delivery vans

B. Motorcycles

C. Vehicles towing a trailer

D. Motorcycle and sidecar outfits

5. Your vehicle breaks down on a motorway and you need to call for help. Why might it be better to use an emergency roadside telephone rather than a mobile phone?

A. It connects you to a local garage

B. Using a mobile phone will distract other drivers

C. It allows easy location by the emergency services

D. Mobile phones don't work on motorways

6. Your vehicle broke down on the hard shoulder of a motorway, but has now been repaired. How should you rejoin the main carriageway?

A. Move out onto the carriageway, then build up your speed

B. Move out onto the carriageway using your hazard warning lights

C. Gain speed on the hard shoulder before moving out onto the carriageway

D. Wait on the hard shoulder until someone flashes their headlights at you

7. You're travelling along a motorway. Where would you find a crawler or climbing lane?

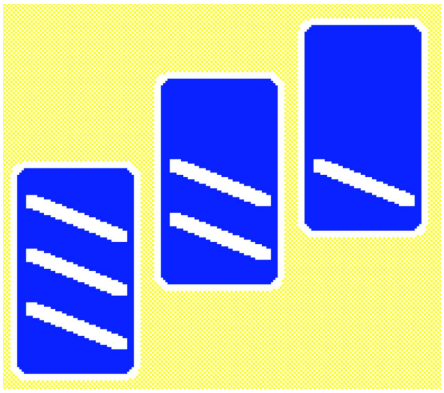

A. Before a junction

B. On a steep gradient

C. Before a service area

D. Along the hard shoulder

8. What do these motorway signs mean?

A. They're countdown markers to a bridge

B. They're distance markers to the next telephone

C. They're countdown markers to the next exit

D. They warn of a police control ahead

9. Where are amber reflective studs found on a motorway?

A. Between the hard shoulder and the carriageway

B. Between the acceleration lane and the carriageway

C. Between the central reservation and the carriageway

D. Between each pair of lanes

10. What colour are the reflective studs between the lanes on a motorway?

A. Green

B. Amber

C. White

D. Red

11. What colour are the reflective studs between a motorway and a slip road?

A. Amber

B. White

C. Green

D. Red

12. Your vehicle has broken down on a motorway. In which direction should you walk to find the nearest emergency telephone?

A. With the traffic flow

B. Facing oncoming traffic

C. In the direction shown on the marker posts

D. In the direction of the nearest exit

13. Why is it important to make full use of the slip road as you join a motorway?

A. Because there's space available to turn round if you need to

B. To allow you direct access to the overtaking lanes

C. To allow you to fit safely into the traffic flow in the left-hand lane

D. Because you can continue on the hard shoulder

14. How should you position yourself when you use the emergency telephone on a motorway?

A. Stand on the hard shoulder

B. Keep your back to the traffic

C. Face the oncoming traffic

D. Stay close to the carriageway

15. What colour are the reflective studs between the hard shoulder and the left-hand lane of a motorway?

A. Green

B. Red

C. White

D. Amber

16. On a three-lane motorway, which lane should you use if there's no traffic ahead?

A. Left

B. Right

C. Centre

D. Either the right or centre

17. What should you do when going through a contraflow system on a motorway?

A. Use dipped headlights

B. Keep a good distance from the vehicle ahead

C. Switch lanes to keep the traffic flowing

D. Stay close to the vehicle ahead to reduce queues

18. You're on a three-lane motorway. Which lane are you in if there are red reflective studs on your left and white ones to your right?

A. In the right-hand lane

B. In the middle lane

C. On the hard shoulder

D. In the left-hand lane

19. What should you do when you're approaching roadworks on a motorway?

A. Speed up to clear the area quickly

B. Always use the hard shoulder

C. Obey the speed limit

D. Stay very close to the vehicle in front

20. Which vehicles are prohibited from using the motorway?

A. Cars with automatic transmission

B. Double-deck buses

C. Motorcycles over 50 cc

D. Powered mobility scooters

21. What should you do while you're driving or riding along a motorway?

A. Look much further ahead than you would on other roads

B. Travel much faster than you would on other roads

C. Maintain a shorter separation distance than you would on other roads

D. Concentrate more than you would on other roads

22. What should you do immediately after joining a motorway?

A. Position your vehicle in the centre lane

B. Stay in the left-hand lane

C. Re-adjust your mirrors

D. Try to overtake

23. When would you use the right-hand lane on a three-lane motorway?

A. When you're turning right

B. When you're trying to save fuel

C. When you're travelling above the speed limit

D. When you're overtaking

24. You're on a motorway. The hard shoulder is not being used as a running lane. When should you use the hard shoulder?

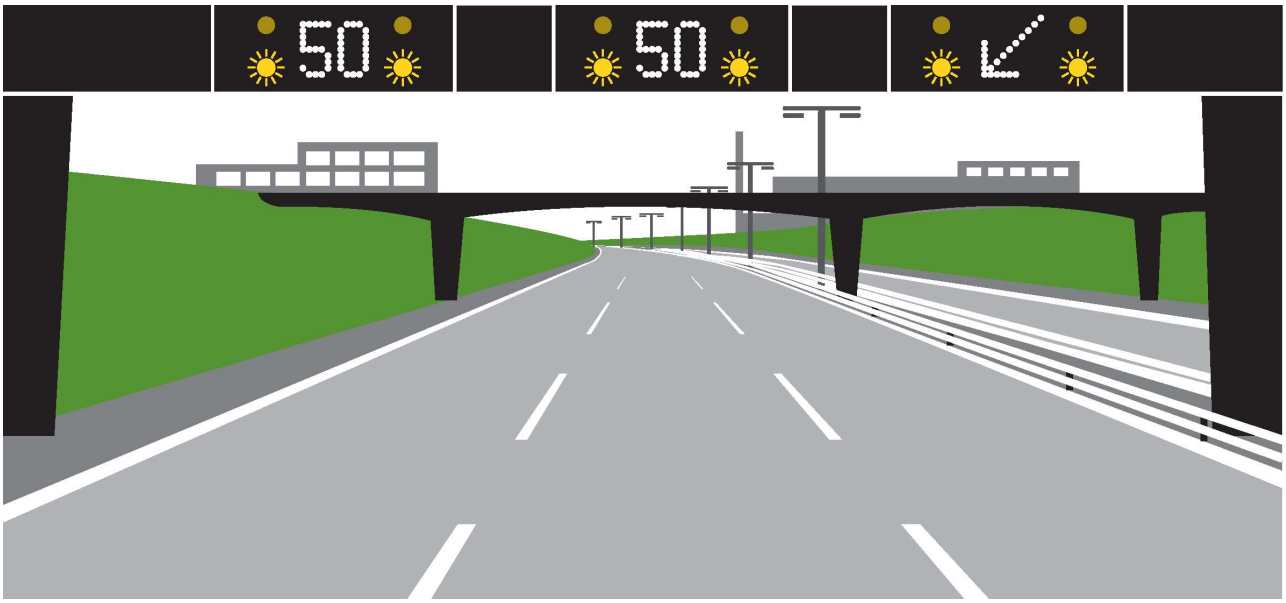

A. When you're joining the motorway

B. When you're stopping for a rest

C. When you're leaving the motorway

D. When you're stopping in an emergency

25. You're in the right-hand lane of a three-lane motorway. What do these overhead signs mean?

A. Move to the left and reduce your speed to 50 mph

B. Leave the motorway at the next exit

C. Use the hard shoulder until you've passed the hazard

D. There are roadworks 50 metres (55 yards) ahead

26. When are you allowed to stop on a motorway?

A. When you need to walk and get fresh air

B. When you wish to pick up hitchhikers

C. When you're signalled to do so by traffic signals

D. When you need to use a mobile telephone

27. You're travelling in the left-hand lane of a three-lane motorway. How should you react to traffic joining from a slip road?

A. Increase your speed to ensure they join behind you

B. Adjust your speed or change lane if you can do so safely

C. Maintain a steady speed

D. Switch on your hazard warning lights

28. How should you use the lanes on a motorway?

A. Stay in one lane until you reach your exit

B. Use the lane that has the least traffic

C. Keep to the left-hand lane unless you're overtaking

D. Overtake using the lane that’s clearest

29. You're travelling along a motorway. When are you allowed to overtake on the left?

A. When you warn drivers behind by signalling left

B. When you can see well ahead that the hard shoulder is clear

C. When the traffic in the right-hand lane is signalling right

D. When in queues and traffic to your right is moving more slowly than you are

30. When would you use an emergency area on a motorway?

A. To stop and check where you are

B. In cases of emergency or breakdown

C. If you think you'll be involved in a road rage incident

D. To make a private phone call

31. Traffic officers operate on motorways and some primary routes in England and Wales. What are they authorised to do?

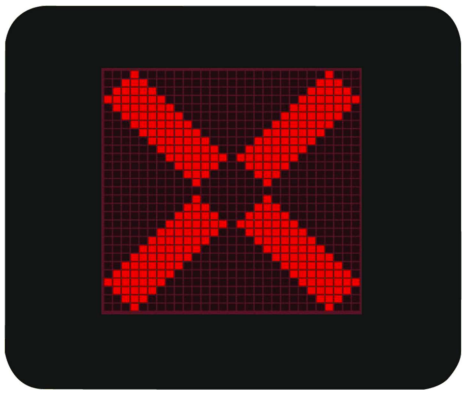

A. Issue fixed penalty notices

B. Stop and arrest drivers who break the law

C. Repair broken-down vehicles on the motorway

D. Stop and direct anyone on a motorway

32. You're on a motorway. What does it mean when a red cross is displayed above the hard shoulder?

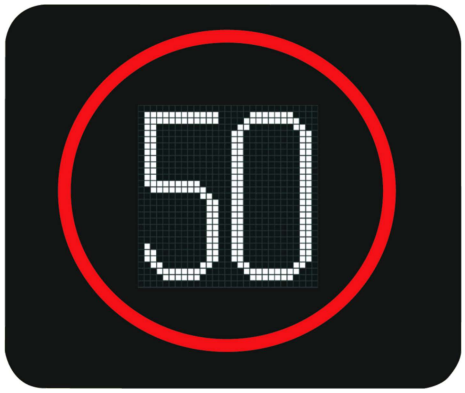

A. This lane can be used if you need a rest

B. Pull up in this lane to answer your mobile phone

C. Use this lane as a running lane

D. You must not travel in this lane

33. You're on a motorway. What does it mean when a mandatory speed limit is displayed above the hard shoulder?

A. You can park on the hard shoulder if you feel tired

B. You shouldn't travel in this lane

C. The hard shoulder can be used as a running lane

D. You can pull up in this lane to answer a mobile phone

34. How do motorways reduce traffic bunching?

A. By using variable speed limits

B. By using higher speed limits

C. By using advisory speed limits

D. By using minimum speed limits

35. What helps to reduce traffic bunching on a motorway?

A. Lane closures

B. Variable speed limits

C. Contraflow systems

D. National speed limits

36. When may you stop on a motorway?

A. If your mobile phone rings

B. If you have to read a map

C. When you're tired and need a rest

D. In an emergency or breakdown

37. What's the national speed limit for a car or motorcycle on a motorway?

A. 70 mph

B. 50 mph

C. 60 mph

D. 80 mph

38. You stop on the hard shoulder of a motorway and use the emergency telephone. Where's the best place to wait for help to arrive?

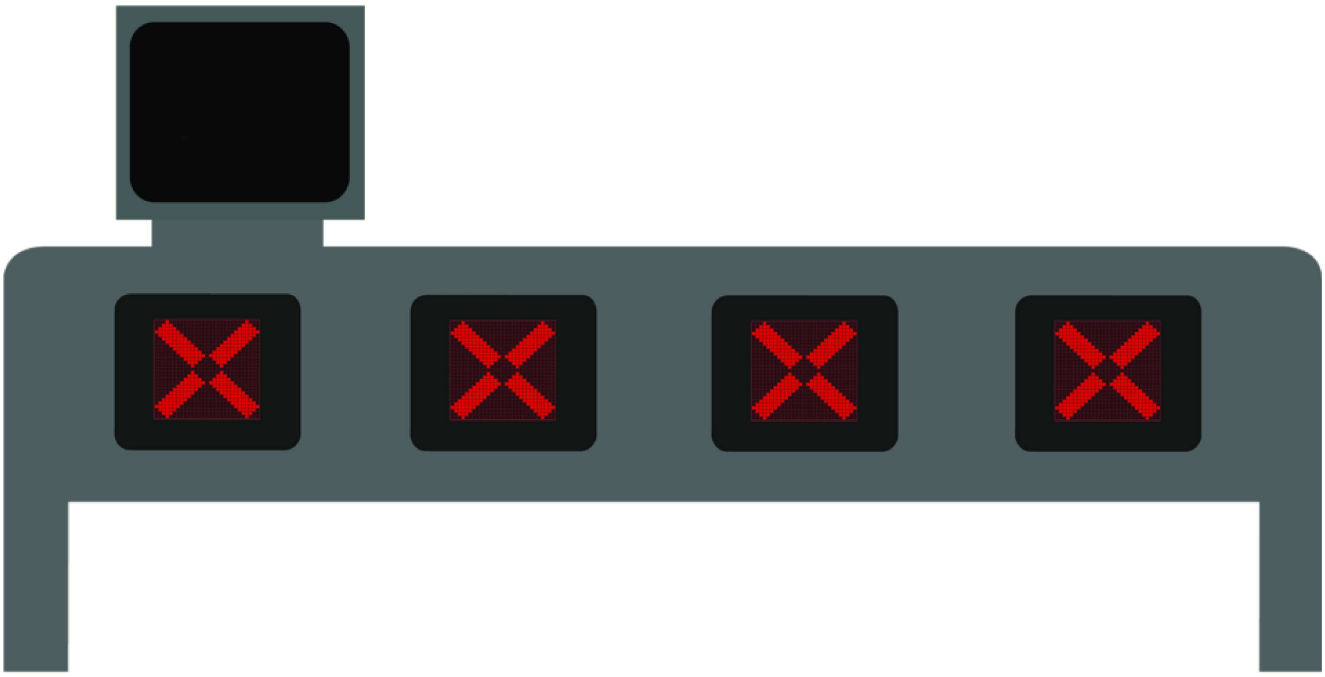

A. With your vehicle

B. Next to the phone

C. Well away from the carriageway

D. On the hard shoulder

39. You're on a motorway. What must you do if there's a red cross showing above every lane?

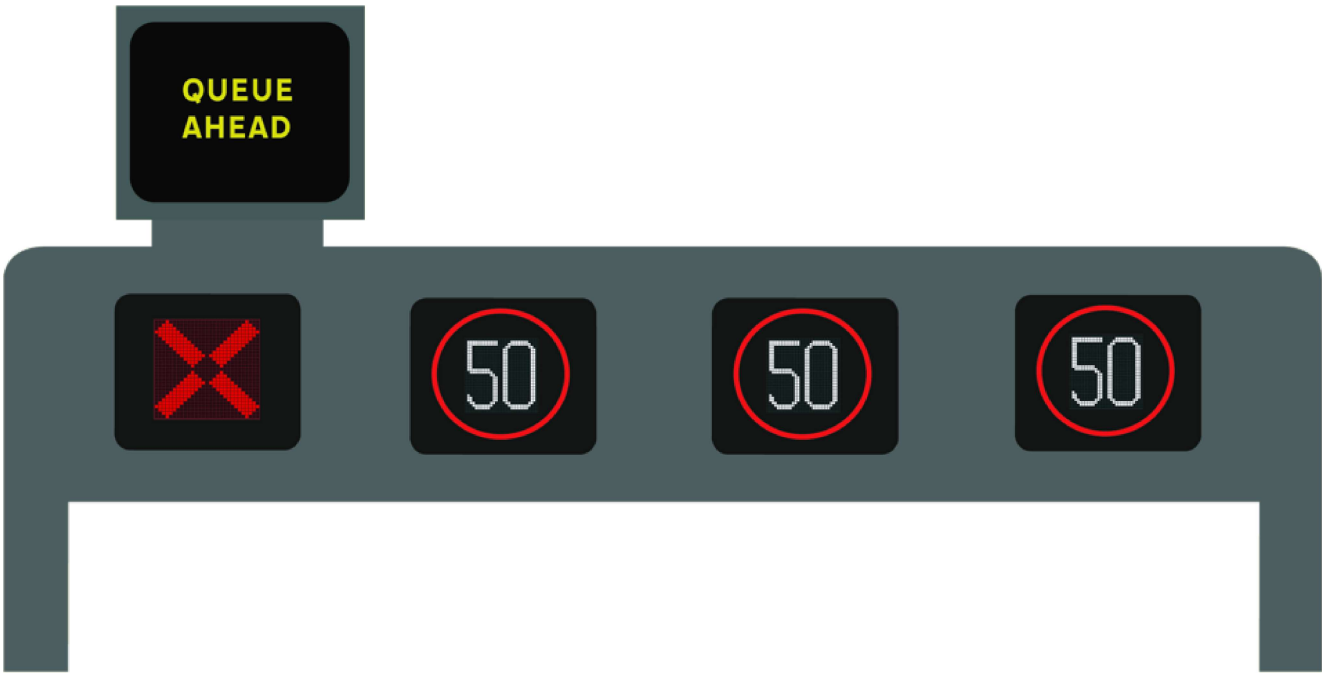

A. Leave at the next exit

B. Pull onto the hard shoulder

C. Slow down and watch for further signals

D. Stop and wait

40. You're on a motorway. What does it mean if a red cross is showing above the hard shoulder and mandatory speed limits above all other lanes?

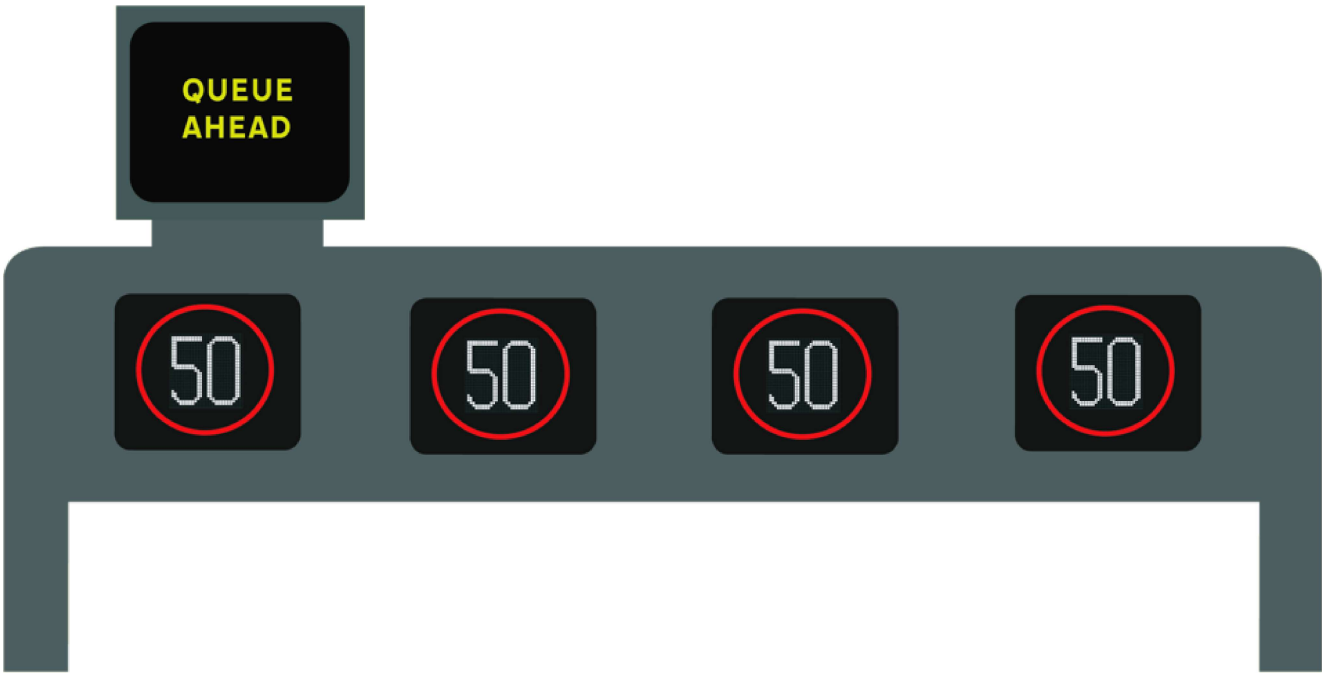

A. The hard shoulder can be used as a normal running lane

B. The hard shoulder can be used as a rest area if you feel tired

C. The hard shoulder is for emergency or breakdown use only

D. The hard shoulder has a speed limit of 50 mph

41. What does this motorway sign mean?

A. Use the three right-hand lanes only

B. Use any lane except the hard shoulder

C. Use the hard shoulder only

D. Use all the lanes, including the hard shoulder

42. Where should you stop to rest if you feel tired while you're travelling along a motorway?

A. On the central reservation

B. On a slip road

C. At the nearest service area

D. On the hard shoulder

43. You have stopped in an emergency area. What must you do before you rejoin the carriageway?

A. Move away with your hazard lights on

B. Use the emergency telephone

C. Give an arm signal as you are moving off

D. Switch on your vehicle's headlights

44. How should you rejoin the motorway after a breakdown on the hard shoulder?

A. Wait until a vehicle in the left-hand lane signals to you that it's safe to rejoin

B. Build up speed on the hard shoulder before looking for a safe gap in the traffic

C. Move straight out into the left-hand lane as you are not allowed to drive on the hard shoulder

D. Keep your hazard lights flashing until you have safely rejoined the carriageway

45. What's the speed limit for a car towing a trailer on a motorway?

A. 60 mph

B. 40 mph

C. 50 mph

D. 70 mph

46. When should you use the left-hand lane of a motorway?

A. When you're making a phone call

B. When your vehicle breaks down

C. When you're overtaking slower traffic in the other lanes

D. When the road ahead is clear

47. You're driving on a motorway and have to slow down suddenly due to a hazard ahead. How can you warn drivers behind of the hazard?

A. Switch on your hazard warning lights

B. Flash your headlights

C. Sound your horn

D. Switch on your headlights

48. Your car gets a puncture while you're driving on the motorway. What should you do when you've stopped on the hard shoulder?

A. Carefully change the wheel yourself

B. Use an emergency telephone and call for help

C. Try to wave down another vehicle for help

D. Only change the wheel if you have a passenger to help you

49. What should you do if you're driving on a motorway and you miss the exit that you wanted to take?

A. Carefully reverse along the hard shoulder

B. Make a U-turn at the next gap in the central reservation

C. Carefully reverse in the left-hand lane

D. Carry on to the next exit

50. Your vehicle has broken down on a motorway. What should you do if you aren't able to get onto the hard shoulder?

A. Switch on your hazard warning lights

B. Stand behind your vehicle to warn others

C. Attempt to repair your vehicle quickly

D. Stop the traffic behind and ask for help

51. Why is it particularly important to check your vehicle before making a long motorway journey?

A. You'll have to do more harsh braking on motorways

B. Continuous high speeds increase the risk of your vehicle breaking down

C. The road surface will wear down the tyres faster

D. Motorway services areas don't deal with breakdowns

52. You're driving on a motorway. What does it mean if the car in front shows its hazard warning lights for a short time?

A. The driver wants you to overtake

B. There's a police speed check ahead

C. Traffic ahead is slowing or stopping suddenly

D. The other car is going to change lanes

53. You're driving on the motorway. Which lane should you get into well before you reach your exit?

A. The left-hand lane

B. The right-hand lane

C. The hard shoulder

D. The middle lane

54. What restrictions apply to people who have a provisional driving licence?

A. They can't drive at night

B. They can't drive with more than one passenger

C. They can't drive unaccompanied

D. They can't drive over 30 mph

55. Your vehicle breaks down on a motorway and you manage to stop on the hard shoulder. What should you do if you use your mobile phone to call for help?

A. Phone a friend and ask them to come and collect you

B. Check your location from the nearest marker posts beside the hard shoulder

C. Wait in the car for the emergency services to arrive

D. Stand at the rear of the vehicle while making the call

56. You're towing a trailer along a three-lane motorway. When may you use the right-hand lane?

A. When there are lane closures

B. When there's slow-moving traffic

C. When you can maintain a high speed

D. When large vehicles are in the left and centre lanes

57. What would you expect to find at a contraflow system on a motorway?

A. Temporary traffic lights

B. Lower speed limits

C. Wider lanes than normal

D. Road humps

Answers

1. A - Match your speed to traffic in the left-hand lane and filter into a safe gap

You should give way to traffic already on the motorway. Where possible, traffic may move over to let you in, but don’t force your way into the traffic stream. Traffic could be travelling at high speed, so try to match your speed to filter in without affecting the traffic flow.

2. D - 70 mph

Travelling at the national speed limit doesn't allow you to hog the right-hand lane. Always use the left-hand lane whenever possible. When leaving a motorway, get into the left-hand lane well before your exit. Reduce your speed on the slip road and look out for sharp bends or curves and traffic queuing at roundabouts.

3. B - Any vehicle that isn't overtaking

On a motorway, all traffic should use the left-hand lane unless overtaking. When overtaking a number of slower vehicles, move back to the left-hand lane when you’re safely past. Check your mirrors frequently and don’t stay in the middle or right-hand lane if the left-hand lane is free.

4. C - Vehicles towing a trailer

On the motorway, any vehicle towing a trailer is restricted to 60 mph. It’s not allowed in the right-hand lane, as it might hold up faster-moving traffic that wishes to overtake in that lane.

5. C - It allows easy location by the emergency services

On a motorway, it's best to use a roadside emergency telephone so that the emergency services are able to find you easily. The location of the nearest telephone is shown by an arrow on marker posts at the edge of the hard shoulder. If you use a mobile, find out the number on the nearest marker post before you call. This number will let the operator know where you are and in which direction you're travelling.

6. C - Gain speed on the hard shoulder before moving out onto the carriageway

Signal your intention and build up sufficient speed on the hard shoulder so that you can filter into a safe gap in the traffic. Don't push your way into a small gap or cause other traffic to alter speed or direction.

7. B - On a steep gradient

Large, slow-moving vehicles can hinder the progress of other traffic. On a steep gradient, an extra crawler lane may be provided for slow-moving vehicles to allow faster-moving traffic to flow more easily.

8. C - They're countdown markers to the next exit

The exit from a motorway is indicated by countdown markers. These are positioned 90 metres (100 yards) apart, the first being 270 metres (300 yards) from the start of the slip road. Move into the left-hand lane well before you reach the start of the slip road.

9. C - Between the central reservation and the carriageway

On motorways, reflective studs of various colours are fixed in the road between the lanes. These help you to identify which lane you're in when it's dark or in poor visibility. Amber-coloured studs are found on the right-hand edge of the main carriageway, next to the central reservation.

10. C - White

White studs are found between the lanes on motorways. They reflect back the light from your headlights. This is especially useful in bad weather, when visibility is restricted.

11. C - Green

The studs between the carriageway and the hard shoulder are normally red. These change to green where there's a slip road, helping you to identify slip roads when visibility is poor or when it's dark.

12. C - In the direction shown on the marker posts

Along the hard shoulder there are marker posts at 100-metre intervals. These will direct you to the nearest emergency telephone.

13. C - To allow you to fit safely into the traffic flow in the left-hand lane

Try to join the motorway without affecting the progress of the traffic in the left-hand lane and always give way to traffic already on the motorway. At busy times, you may have to slow down to merge into slow-moving traffic.

14. C - Face the oncoming traffic

Traffic is passing you at speed. If the draught from a large lorry catches you by surprise, it could blow you off balance and even onto the carriageway. By facing the oncoming traffic, you can see approaching lorries and so be prepared for their draught. You'll also be in a position to see any other hazards approaching.

15. B - Red

Red studs are placed between the edge of the carriageway and the hard shoulder. Where slip roads leave or join the motorway, the studs are green.

16. A - Left

On a three-lane motorway, you should travel in the left-hand lane unless you're overtaking. This applies regardless of the speed at which you're travelling.

17. B - Keep a good distance from the vehicle ahead

At roadworks, and especially where a contraflow system is operating, a speed restriction is likely to be in place. Keep to the lower speed limit and don't • switch lanes • get too close to the vehicle in front of you. Be aware that there will be no permanent barrier between you and the oncoming traffic.

18. D - In the left-hand lane

The colours of the reflective studs on the motorway and their locations are • red – between the hard shoulder and the carriageway • white – between lanes • amber – between the carriageway and the central reservation • green – along slip-road exits and entrances • bright green/yellow – at roadworks and contraflow systems.

19. C - Obey the speed limit

Be aware of reduced speed limits at roadworks. Speed limits shown inside a red circle are mandatory and cameras are often used to enforce the reduced limit. Slow down in good time and keep your distance from the vehicle in front.

20. D - Powered mobility scooters

Motorways mustn’t be used by pedestrians, cyclists, motorcycles under 50 cc, certain slow-moving vehicles without permission, and powered wheelchairs/mobility scooters.

21. A - Look much further ahead than you would on other roads

Traffic on motorways usually travels faster than on other roads. You need to be looking further ahead to give yourself more time to react to any hazard that may develop.

22. B - Stay in the left-hand lane

When you've just joined a motorway, stay in the left-hand lane long enough to get used to the higher speeds of motorway traffic before considering overtaking.

23. D - When you're overtaking

The right-hand lane of the motorway is for overtaking. Sometimes you may be directed into a right-hand lane as a result of roadworks or a traffic incident. This will be indicated by signs or officers directing the traffic.

24. D - When you're stopping in an emergency

Don’t use the hard shoulder for stopping unless it's an emergency. If you want to stop for any other reason, go to the next exit or service area.

25. A - Move to the left and reduce your speed to 50 mph

You must obey these signs even if there appear to be no problems ahead. There could be queuing traffic or another hazard that you can't see yet.

26. C - When you're signalled to do so by traffic signals

You must stop if overhead gantry signs show a red cross above every lane on the motorway. If any of the other lanes doesn't show a red cross, you may move into that lane and continue if it's safe to do so.

27. B - Adjust your speed or change lane if you can do so safely

Plan well ahead when approaching a slip road. If you see traffic joining the motorway, be prepared to adjust your speed or move to another lane if it's safe to do so. This can help the flow of traffic joining the motorway, especially at peak times.

28. C - Keep to the left-hand lane unless you're overtaking

You should normally travel in the left-hand lane unless you're overtaking a slower-moving vehicle. When you've finished overtaking, move back into the left-hand lane, but don’t cut across in front of the vehicle that you’ve overtaken.

29. D - When in queues and traffic to your right is moving more slowly than you are

Never overtake on the left, unless the traffic is moving in queues and the queue on your right is moving more slowly than the one you're in.

30. B - In cases of emergency or breakdown

On some motorways, emergency areas are built at the side of the carriageway. If you break down, try to get your vehicle into the emergency area where there's an emergency telephone. The phone connects directly to a control centre. Before rejoining the motorway, you must call the control centre - a lane may need to be closed to allow you to rejoin safely.

31. D - Stop and direct anyone on a motorway

Traffic officers don't have enforcement powers but are able to stop and direct people on motorways and some ‘A’ class roads. They operate in England and Wales and work in partnership with the police at incidents, providing a highly trained and visible service. They're recognised by an orange-and-yellow jacket and their vehicle has yellow-and-black markings.

32. D - You must not travel in this lane

At certain times, the hard shoulder will be open as a running lane. However, a red cross above the hard shoulder shows that it is not open as a running lane and should only be used for emergencies and breakdowns.

33. C - The hard shoulder can be used as a running lane

A mandatory speed-limit sign above the hard shoulder shows that this part of the road can be used as a running lane between junctions. You must stay within the speed limit. Look out for vehicles that may have broken down and could be blocking the hard shoulder.

34. A - By using variable speed limits

You must follow the mandatory signs on the gantries above motorway lanes, including the hard shoulder. Variable speed limits help keep the traffic moving and also help to prevent bunching.

35. B - Variable speed limits

Congestion can be reduced by keeping traffic at a constant speed. At busy times, maximum speed limits are displayed on overhead gantries. These can be varied quickly, depending on the amount of traffic. By keeping to a constant speed on busy sections of motorway, overall journey times are normally improved.

36. D - In an emergency or breakdown

You shouldn't normally stop on a motorway, but there may be occasions when you need to do so. If your vehicle breaks down or there's an emergency, stop on the hard shoulder and use the emergency telephones to call for assistance.

37. A - 70 mph

The national speed limit for a car or motorcycle on a motorway is 70 mph. Lower speed limits may be in force; for example, at roadworks. Variable speed limits also operate in some areas when the motorway is very busy. Cars or motorcycles towing trailers are subject to a lower speed limit.

38. C - Well away from the carriageway

When you're on the hard shoulder, you're at risk of being injured by motorway traffic. The safest place to wait is away from the carriageway, but near enough to see the emergency services arriving.

39. D - Stop and wait

A red cross signal above all lanes means you must stop and wait. Don't change lanes and don't try to continue any further along the motorway.

40. C - The hard shoulder is for emergency or breakdown use only

A red cross above the hard shoulder shows that it's closed as a running lane and should only be used for emergencies or breakdowns. On some motorways, the hard shoulder may be used as a running lane at busy times. This will be shown by a mandatory speed limit on the gantry above the hard shoulder.

41. D - Use all the lanes, including the hard shoulder

You must obey mandatory speed-limit signs above motorway lanes, including the hard shoulder. In this case, you can use the hard shoulder as a running lane but you should look for any vehicles that may have broken down and may be blocking the hard shoulder.

42. C - At the nearest service area

If you feel tired, stop at the nearest service area. If that's too far away, leave the motorway at the next exit and find a safe place to stop. You mustn't stop on the carriageway or hard shoulder of a motorway except in an emergency, when in a traffic queue, or when signalled to do so by a police officer, a traffic officer or traffic signals. Plan your journey so that you have regular rest stops.

43. B - Use the emergency telephone

To rejoin the carriageway from an emergency area, you must use the emergency telephone and follow the operator's advice. A lane may have to be closed so that you can rejoin the carriageway safely.

44. B - Build up speed on the hard shoulder before looking for a safe gap in the traffic

To rejoin a motorway from the hard shoulder, you first need to build up speed on the hard shoulder. You can then look for a safe gap in the traffic in the left-hand lane. Watch for traffic that may be returning from a lane on the right into the left-hand lane.

45. A - 60 mph

If you’re towing a small, light trailer, it won’t reduce your vehicle’s performance by very much and it may not be visible in your mirrors. However, strong winds or buffeting from large vehicles might cause the trailer to snake from side to side. Be aware of your speed and don’t exceed the reduced speed limit imposed on vehicles towing trailers.

46. D - When the road ahead is clear

You should drive in the left-hand lane whenever possible. Only use the other lanes for overtaking or when directed to do so by signals. Using other lanes when the left-hand lane is empty can frustrate drivers behind you.

47. A - Switch on your hazard warning lights

Using your hazard warning lights, as well as your brake lights, will give the traffic behind an extra warning of the problem ahead. Only use them for long enough for your warning to be seen.

48. B - Use an emergency telephone and call for help

Park as far to the left as you can and leave the vehicle by the nearside door. Don't attempt even simple repairs. Instead, walk to an emergency telephone on your side of the road and phone for help. While waiting for help to arrive, stay by your car, keeping well away from the carriageway and hard shoulder.

49. D - Carry on to the next exit

It's illegal to reverse, cross the central reservation or drive against the traffic flow on a motorway. If you miss your exit, carry on until you reach the next one. Ask yourself why you missed your exit – if you think that your concentration is fading, take a break before continuing your journey.

50. A - Switch on your hazard warning lights

If you can’t get your vehicle onto the hard shoulder, use your hazard warning lights to warn others. Leave your vehicle only when you can safely get clear of the carriageway. Don't try to repair the vehicle or attempt to place any warning device on the carriageway.

51. B - Continuous high speeds increase the risk of your vehicle breaking down

Before you start your journey, make sure that your vehicle can cope with the demands of high-speed driving. You should check a number of things; the main ones being fuel, oil, water and tyres. You also need to plan rest stops if you're making a long journey.

52. C - Traffic ahead is slowing or stopping suddenly

If the vehicle in front shows its hazard warning lights, there may be an incident, stopped traffic or queuing traffic ahead. By keeping a safe distance from the vehicle in front, you're able to look beyond it and see any hazards well ahead.

53. A - The left-hand lane

You'll see the first advance direction sign one mile from a motorway exit. If you're travelling at 60 mph in the right-hand lane, you'll only have about 50 seconds before you reach the countdown markers. There'll be another sign at the half-mile point. Don't cut across lanes of traffic at the last moment – move to the left-hand lane in good time.

54. C - They can't drive unaccompanied

You won't be able to drive unaccompanied until you've passed your practical driving test. If you haven't driven on the motorway while you were learning, ask your instructor to take you for a lesson on the motorway when you've passed your test. Alternatively, you could take part in the Pass Plus scheme. This has been created for new drivers and includes motorway driving. Ask your instructor for details.

55. B - Check your location from the nearest marker posts beside the hard shoulder

You should use an emergency telephone when you break down on the motorway; only use your mobile if this isn't possible. The emergency services need to know your exact location so they can reach you as quickly as possible. Look for a number on the nearest marker post beside the hard shoulder. Give this number when you call the emergency services.

56. A - When there are lane closures

If you're towing a caravan or trailer, you mustn't use the right-hand lane of a motorway with three or more lanes except in certain specified circumstances, such as when lanes are closed.

57. B - Lower speed limits

When approaching a contraflow system, reduce speed in good time and obey all speed limits. You may be travelling in a narrower lane than normal, with no permanent barrier between you and the oncoming traffic. Be aware that the hard shoulder may be used for traffic and the road ahead could be obstructed by slow-moving or broken-down vehicles.
