1. You're about to overtake a slow-moving motorcyclist. Which sign would make you take special care?

A.

B.

C.

D.

2. You're waiting to turn right out of a minor road. It's clear to the left but a lorry is coming from the right. Why should you wait, even if you have enough time to turn?

A. Anything overtaking the lorry will be hidden from view

B. The load on the lorry might be unstable

C. The lorry might be slowing down

D. The lorry could suddenly speed up

3. You're following a long vehicle as it approaches a crossroads. What should you do if it signals left but moves out to the right?

A. Get closer in order to pass it quickly

B. Overtake it as it starts to slow down

C. Assume the signal is wrong and that it's turning right

D. Stay well back and give it room

4. You're following a long vehicle approaching a crossroads. What should you do if the driver signals right but moves close to the left-hand kerb?

A. Wait behind the long vehicle

B. Overtake on the right-hand side

C. Report the driver to the police

D. Warn the driver about the wrong signal

5. You’re approaching a mini-roundabout. What should you do if a long vehicle in front signals left but positions over to the right?

A. Follow the same course as the lorry

B. Sound your horn

C. Overtake on the left

D. Keep well back

6. You're driving on a single carriageway road. Why should you keep well back while you're following a large vehicle?

A. To leave a gap in case the vehicle stops and rolls back

B. To give yourself acceleration space if you decide to overtake

C. To offer other drivers a safe gap if they want to overtake you

D. To get the best view of the road ahead

7. You're travelling behind a bus. What should you do if it pulls up at a bus stop?

A. Accelerate past the bus

B. Pull in closely behind the bus

C. Sound your horn

D. Look for pedestrians

8. You're following a lorry on a wet road. What should you do when spray makes it difficult to see the road ahead?

A. Put your headlights on full beam

B. Keep close to the lorry, away from the spray

C. Drop back until you can see better

D. Speed up and overtake quickly

9. You're leaving a safe gap as you follow a large vehicle. What should you do if a car moves into this gap?

A. Sound your horn

B. Start to overtake

C. Flash your headlights

D. Drop back further

10. What should you do when you're approaching a bus that's signalling to move away from a bus stop?

A. Get past before it moves

B. Allow it to pull away, if it's safe to do so

C. Flash your headlights as you approach

D. Signal left and wave the bus on

11. What should you do if you want to overtake a long, slow-moving vehicle on a busy road?

A. Follow it closely and keep moving out to see the road ahead

B. Keep well back so that you get a good view of the road ahead

C. Stay behind until the driver waves you past

D. Flash your headlights for the oncoming traffic to give way

12. Which vehicles are least likely to be affected by side wind?

A. High-sided vehicles

B. Cyclists

C. Motorcyclists

D. Cars

13. What should you do as you approach this lorry?

A. Move to the right-hand side of the road

B. Slow down and be prepared to wait

C. Make the lorry wait for you

D. Flash your lights at the lorry

14. You're following a large vehicle as it approaches a crossroads. What should you do if the driver signals to turn left?

A. Overtake if you can leave plenty of room

B. Wait for the vehicle to finish turning

C. Wait for the driver to cancel their signal

D. Overtake if there are no oncoming vehicles

15. Why is it more difficult to overtake a large vehicle than a car?

A. It will take longer for a large vehicle to accelerate

B. It will take longer to overtake a large vehicle

C. A large vehicle will be fitted with a speed limiter

D. A large vehicle will have air brakes

16. It's very windy. What should you do if you're behind a motorcyclist who's overtaking a high-sided vehicle?

A. Overtake the motorcyclist immediately

B. Keep well back

C. Stay level with the motorcyclist

D. Keep close to the motorcyclist

17. What should you do if there's a bus at a bus stop ahead of you?

A. Pass the bus as quickly as you possibly can

B. Flash your lights to warn the driver of your presence

C. Continue at the same speed but sound your horn as a warning

D. Watch carefully for the sudden appearance of pedestrians

18. What should you be prepared to do in this situation?

A. Sound your horn and continue

B. Slow down and give way

C. Report the driver to the police

D. Squeeze through the gap

19. Why should drivers be more careful on roads where trams also operate?

A. Because trams can't steer to avoid obstructions

B. Because trams don't have a horn

C. Because trams can't stop for cars

D. Because trams don't have lights

20. You're towing a caravan. Which is the safest type of rear-view mirror to use?

A. Interior wide-angle mirror

B. Ordinary interior mirror

C. Ordinary door mirrors

D. Extended-arm side mirrors

21. You're driving in heavy traffic on a wet road. Which lights should you use if there's a lot of surface spray?

A. Main-beam headlights

B. Dipped headlights

C. Rear fog lights if visibility is more than 100 metres (328 feet)

D. Sidelights only

22. What should you do if you overtake a cyclist when it's very windy?

A. Overtake very slowly

B. Keep close as you pass

C. Sound your horn repeatedly

D. Allow extra room

Answers

1. A -

In windy weather, watch out for motorcyclists and also cyclists, as they can be blown sideways into your path. When you pass them, leave plenty of room and check their position in your mirror before pulling back in.

2. A - Anything overtaking the lorry will be hidden from view

Large vehicles can hide other vehicles that are overtaking – especially motorcycles. You need to be aware of the possibility of hidden vehicles and not assume that it's safe to turn.

3. D - Stay well back and give it room

A long vehicle may need to swing out in the opposite direction as it approaches a turn, to allow the rear wheels to clear the kerb. Don’t try to filter through if you see a gap; as the lorry turns, the gap will close.

4. A - Wait behind the long vehicle

When a long vehicle is going to turn right, it may need to keep close to the left-hand kerb. This is to prevent the rear end of the trailer cutting the corner. You need to be aware of how long vehicles behave in such situations. Don’t overtake the lorry, because it could turn as you’re alongside. Stay behind and wait for it to turn.

5. D - Keep well back

At mini-roundabouts, there isn’t much room for a long vehicle to manoeuvre. It will have to swing out wide so that it can complete the turn safely. Keep well back and don’t try to move up alongside it.

6. D - To get the best view of the road ahead

When following a large vehicle, keep well back. If you’re too close, you won’t be able to see the road ahead and the driver of the long vehicle might not be able to see you in their mirrors.

7. D - Look for pedestrians

People may be running to catch the bus or passengers leaving the bus might wish to cross the road in front of the bus. Look out for them if you intend to go past it. Consider how many people are waiting to get on the bus – check the queue if you can. The bus might move off straight away if no-one is waiting to get on. If a bus is signalling to pull out, give it priority if it’s safe to do so.

8. C - Drop back until you can see better

Large vehicles can throw up a lot of spray when it's wet. This makes it difficult for drivers behind to see the road ahead. You'll be able to see more by dropping back further, out of the spray. This will also increase your separation distance, giving you more room to stop if you have to.

9. D - Drop back further

Sometimes your separation distance is shortened by a driver moving into the gap you've allowed. When this happens, react positively, stay calm and drop further back to re-establish a safe following distance.

10. B - Allow it to pull away, if it's safe to do so

Try to give way to buses if you can do so safely, especially when the driver signals to pull away from a bus stop. Look out for people getting off the bus or running to catch it, because they may cross the road without looking. Don’t accelerate to get past the bus, and don't flash your lights, as this could mislead other road users.

11. B - Keep well back so that you get a good view of the road ahead

When you're following a long vehicle, stay well back so that you can get a better view of the road ahead. The closer you get, the less you'll be able to see of the road. Be patient and don't take a gamble. Only overtake when you're certain that you can complete the manoeuvre safely.

12. D - Cars

Although cars are the least likely to be affected, side winds can take anyone by surprise. This is most likely to happen after overtaking a large vehicle, when passing gaps between hedges or buildings, and on exposed sections of road.

13. B - Slow down and be prepared to wait

When turning, long vehicles need much more room on the road than other vehicles. At junctions, they may take up the whole of the road space, so be patient and allow them the room they need.

14. B - Wait for the vehicle to finish turning

Hold back and wait until the vehicle has turned before proceeding. Don't overtake, because the vehicle turning left could hide another vehicle emerging from the same junction.

15. B - It will take longer to overtake a large vehicle

Depending on relative speed, it will usually take you longer to pass a lorry than other vehicles. Hazards to watch for include oncoming traffic, junctions ahead, bends or dips that could restrict your view, and signs or road markings that prohibit overtaking. Make sure you can see that it’s safe to complete the manoeuvre before you start to overtake.

16. B - Keep well back

Windy weather affects motorcyclists more than other vehicles. In windy conditions, high-sided vehicles cause air turbulence. You should keep well back, as the motorcyclist could be blown off course.

17. D - Watch carefully for the sudden appearance of pedestrians

As you approach, look out for any signal the driver might make. If you pass the vehicle, watch out for pedestrians attempting to cross the road from behind the bus. They’ll be hidden from view until the last moment.

18. B - Slow down and give way

Sometimes, large vehicles may need more space than other road users. If a vehicle needs more time and space to turn, be prepared to stop and wait.

19. A - Because trams can't steer to avoid obstructions

You should take extra care when you first encounter trams. You'll have to get used to dealing with a different traffic system. Be aware that trams can accelerate and travel very quickly, and they can't change direction to avoid obstructions.

20. D - Extended-arm side mirrors

Towing a large trailer or caravan can greatly reduce your view of the road behind. You may need to fit extended-arm side mirrors so that you can see clearly behind and down both sides of the caravan or trailer.

21. B - Dipped headlights

You must make sure that other road users can see you, but you don't want to dazzle them. Use your dipped headlights during the day if visibility is poor. If visibility falls below 100 metres (328 feet), you may use your rear fog lights, but don’t forget to turn them off when the visibility improves.

22. D - Allow extra room

Cyclists, and motorcyclists, are very vulnerable in high winds. They can easily be blown well off course and veer into your path. Always allow plenty of room when overtaking them. Passing too close could cause a draught and unbalance the rider.
