1. You're following a lorry. Why should you stay well back from these vehicles?

A. So your view ahead isn't obstructed

B. So drivers behind can see you

C. So wind from the lorry won't slow you down

D. So you don't breathe in the lorry’s exhaust fumes

2. You're riding a motorcycle along a country lane. What should you do if you come across cattle on the road?

A. Give them plenty of room

B. Ride up close behind them

C. Rev your engine

D. Sound your horn

3. What should you do if a driver begins to emerge into your path from a side road on the left?

A. Brake hard, then wave them out

B. Let them emerge, then ride close behind

C. Turn into the side road

D. Slow down and be ready to stop

4. What should you do when you're following a car that's being driven by a learner?

A. Sound your horn and overtake

B. Keep calm and be patient

C. Ride close behind

D. Put your headlights on main beam

5. You're riding in fast-flowing traffic. What should you do if the vehicle behind is following too closely?

A. Accelerate to get away from the vehicle behind you

B. Apply the brakes sharply to warn the driver behind

C. Slow down as quickly as possible by braking

D. Slow down gradually to increase the gap in front of you

6. You're riding towards a zebra crossing. What should you do if there's a person in a wheelchair waiting to cross?

A. Continue on your way

B. Be prepared to stop

C. Wave to the person to wait

D. Wave to the person to cross

7. Why should you allow extra room when overtaking another motorcyclist on a windy day?

A. The rider may turn off suddenly to get out of the wind

B. The rider may be travelling faster than normal

C. The rider may stop suddenly

D. The rider may be blown across in front of you

8. You've stopped at a pelican crossing, where a disabled person is crossing very slowly in front of you. What should you do when the lights change to green?

A. Allow the person to finish crossing

B. Sound your horn

C. Ride behind the person

D. Edge forward slowly

9. Where should you take particular care to look out for other motorcyclists and cyclists?

A. At junctions

B. On one-way streets

C. At zebra crossings

D. On dual carriageways

10. Why is it recommended for a rider to make a lifesaver check before turning right?

A. To confirm that they're about to turn

B. To check that the rear indicator is flashing

C. To make sure the side road is clear

D. To check for any overtaking traffic

11. You're about to overtake a group of horse riders. What's most likely to scare the horses?

A. Revving your engine

B. Giving arm signals

C. Your dipped headlights

D. Riding slowly

12. Why are young and new motorcyclists involved in more incidents than other motorcyclists?

A. They don't maintain their motorcycles

B. They ride in bad weather conditions

C. They lack experience and judgement

D. They use borrowed equipment

13. Why is someone new to motorcycling especially vulnerable?

A. They don't understand the rules of the road

B. They're not used to wearing motorcycling gear

C. They're more alert than older riders

D. They lack experience

14. The road outside this school is marked with yellow zigzag lines. What do these lines mean?

A. You must not wait or park your motorcycle here

B. You may park on the lines when dropping off schoolchildren

C. You may park on the lines when picking up schoolchildren

D. You must stay with your motorcycle if you park here

15. Which sign means that there may be people walking along the road?

A.

B.

C.

D.

16. What should you do if you want to turn left at a junction where pedestrians have started to cross?

A. Stop and wave at them to cross

B. Give way to them

C. Sound your horn and proceed

D. Go around them, leaving plenty of room

17. What hazard should you be especially aware of if you're turning left into a side road?

A. Pedestrians

B. Parked vehicles

C. Traffic congestion

D. One-way street

18. Why should you check for motorcyclists just before turning right into a side road?

A. They may be following you closely

B. They may be overtaking on your right

C. They may be emerging from the side road

D. They may be overtaking on your left

19. Why is a toucan crossing different from a puffin crossing?

A. It's controlled by a traffic warden

B. Moped riders can use it

C. It's controlled by two flashing lights

D. Pedestrians and cyclists can use it together

20. How will a school crossing patrol signal you to stop?

A. By displaying a red light

B. By pointing to children waiting to cross

C. By displaying a 'stop' sign

D. By giving you an arm signal

21. Where would you see this sign?

A. At playground areas

B. On the rear of a school bus or coach

C. At the side of the road

D. In the window of a car taking children to school

22. What does this sign mean?

A. A route for cyclists only

B. A route for pedestrians only

C. A route for pedestrians and cyclists

D. No route for pedestrians and cyclists

23. You see a pedestrian carrying a white stick that also has a red band. What does this mean?

A. They're deaf and blind

B. They have limited mobility

C. They're deaf

D. They're blind

24. What would you do if you see older people crossing the road ahead?

A. Wave them across so they know that you've seen them

B. Be patient and allow them to cross in their own time

C. Rev the engine to let them know that you're waiting

D. Tap the horn in case they're hard of hearing

25. What should you do when you see an older person about to cross the road ahead?

A. Be careful; they may misjudge your speed

B. Expect them to wait for you to pass

C. Speed up to get past them quickly

D. Stop and wave them across the road

26. You're approaching a roundabout. What should you do if a cyclist ahead is signalling to turn right?

A. Overtake on the right

B. Give a warning with your horn

C. Signal the cyclist to move across

D. Give the cyclist plenty of room

27. Which vehicle should you allow extra room as you overtake them?

A. Lorry

B. Tractor

C. Bicycle

D. Road-sweeper

28. Why should you look carefully for motorcyclists and cyclists at junctions?

A. They may want to turn into the side road

B. They may slow down to let you turn

C. They're harder to see

D. They might not see you turn

29. You're waiting to come out of a side road. Why should you look carefully for motorcycles?

A. Motorcycles are usually faster than cars

B. Police patrols often use motorcycles

C. Motorcycles can easily be hidden behind obstructions

D. Motorcycles have right of way

30. Why do motorcyclists use dipped headlights in daylight?

A. To stop the battery overcharging

B. So that the rider can be seen more easily

C. To improve the rider’s vision

D. The rider is inviting you to proceed

31. Why do motorcyclists wear bright clothing?

A. To make them more visible

B. They must do so by law

C. It helps keep them cool in summer

D. The colours are popular

32. Why do motorcyclists often look round over their right shoulder just before turning right?

A. To listen for traffic behind them

B. Motorcycles don't have mirrors

C. It helps them balance as they turn

D. To check for traffic in their blind area

33. Which is the most vulnerable road user?

A. Motorcyclist

B. Car driver

C. Tractor driver

D. Lorry driver

34. You're approaching a roundabout. What should you do if there are horses being ridden in front of you?

A. Treat them like any other vehicle

B. Give them plenty of room

C. Accelerate past as quickly as possible

D. Sound your horn as a warning

35. As you approach a pelican crossing, the lights change to green. What should you do if older people are still crossing?

A. Rev your engine to make them hurry

B. Wave them to cross as quickly as they can

C. Wait patiently while they cross

D. Flash your lights in case they haven't noticed you

36. What action should you take when you see flashing amber lights under a school warning sign?

A. Keep up your speed and sound the horn

B. Reduce speed until you're clear of the area

C. Increase your speed to clear the area quickly

D. Wait at the lights until they stop flashing

37. Why should these road markings be kept clear?

A. To allow teachers to park

B. To allow children to be dropped off at school

C. To allow children to see and be seen when they're crossing the road

D. To allow children to be picked up after school

38. Where would you see this sign?

A. On a school bus

B. At a ‘pedestrians only’ area

C. Near a school crossing

D. At a playground entrance

39. You're following two cyclists as they approach a roundabout in the left-hand lane. Where would you expect the cyclists to go?

A. Any direction

B. Left

C. Right

D. Straight ahead

40. You're travelling behind a moped. What should you do if you want to turn left a short distance ahead?

A. Overtake the moped before the junction

B. Pull alongside the moped and stay level until just before the junction

C. Sound your horn as a warning and pull in front of the moped

D. Stay behind until the moped has passed the junction

41. You see a horse rider as you approach a roundabout. What should you do if they're signalling right but keeping well to the left?

A. Proceed as normal

B. Keep close to them

C. Cut in front of them

D. Stay well back

42. How should you react to inexperienced drivers?

A. Sound your horn to warn them of your presence

B. Be patient and prepare for them to react more slowly

C. Flash your headlights to indicate that it's safe for them to proceed

D. Overtake them as soon as possible

43. What should you do when you're following a learner driver who stalls at a junction?

A. Be patient, as you expect them to make mistakes

B. Stay very close behind and flash your headlights

C. Start to rev your engine if they take too long to restart

D. Immediately steer around them and drive on

44. You're on a country road. What should you expect to see coming towards you on your side of the road?

A. Motorcycles

B. Bicycles

C. Pedestrians

D. Horse riders

45. You're following a cyclist. What should you do when you wish to turn left a short distance ahead?

A. Hold back until the cyclist has passed the junction

B. Go around the cyclist on the junction

C. Pull alongside the cyclist and stay level until after the junction

D. Overtake the cyclist before you reach the junction

46. A horse rider is in the left-hand lane approaching a roundabout. Where should you expect the rider to go?

A. To the right

B. To the left

C. In any direction

D. Straight ahead

47. Powered vehicles used by disabled people are small and can be hard to see. What must they display if they're travelling on a dual carriageway?

A. Flashing red beacon

B. Flashing green beacon

C. Flashing blue beacon

D. Flashing amber beacon

48. What does it mean when a moving vehicle is showing a flashing amber beacon?

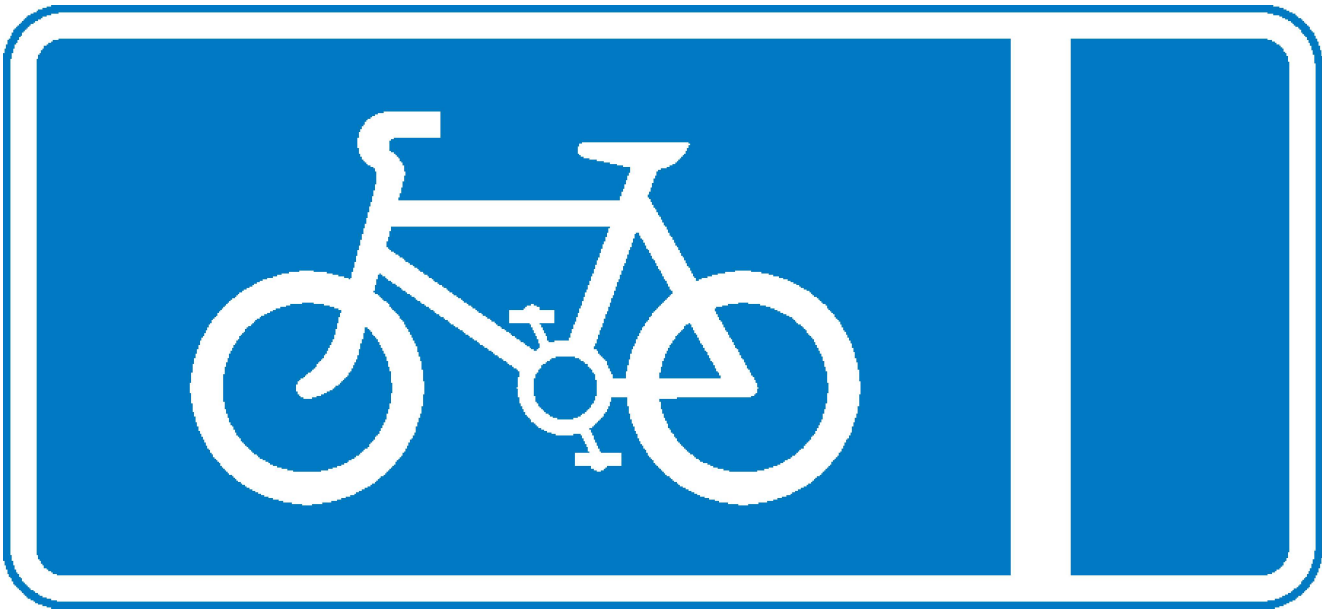

A. The vehicle is slow moving

B. The vehicle has broken down

C. The vehicle is a doctor's car

D. The vehicle belongs to a school crossing patrol

49. What does this sign mean?

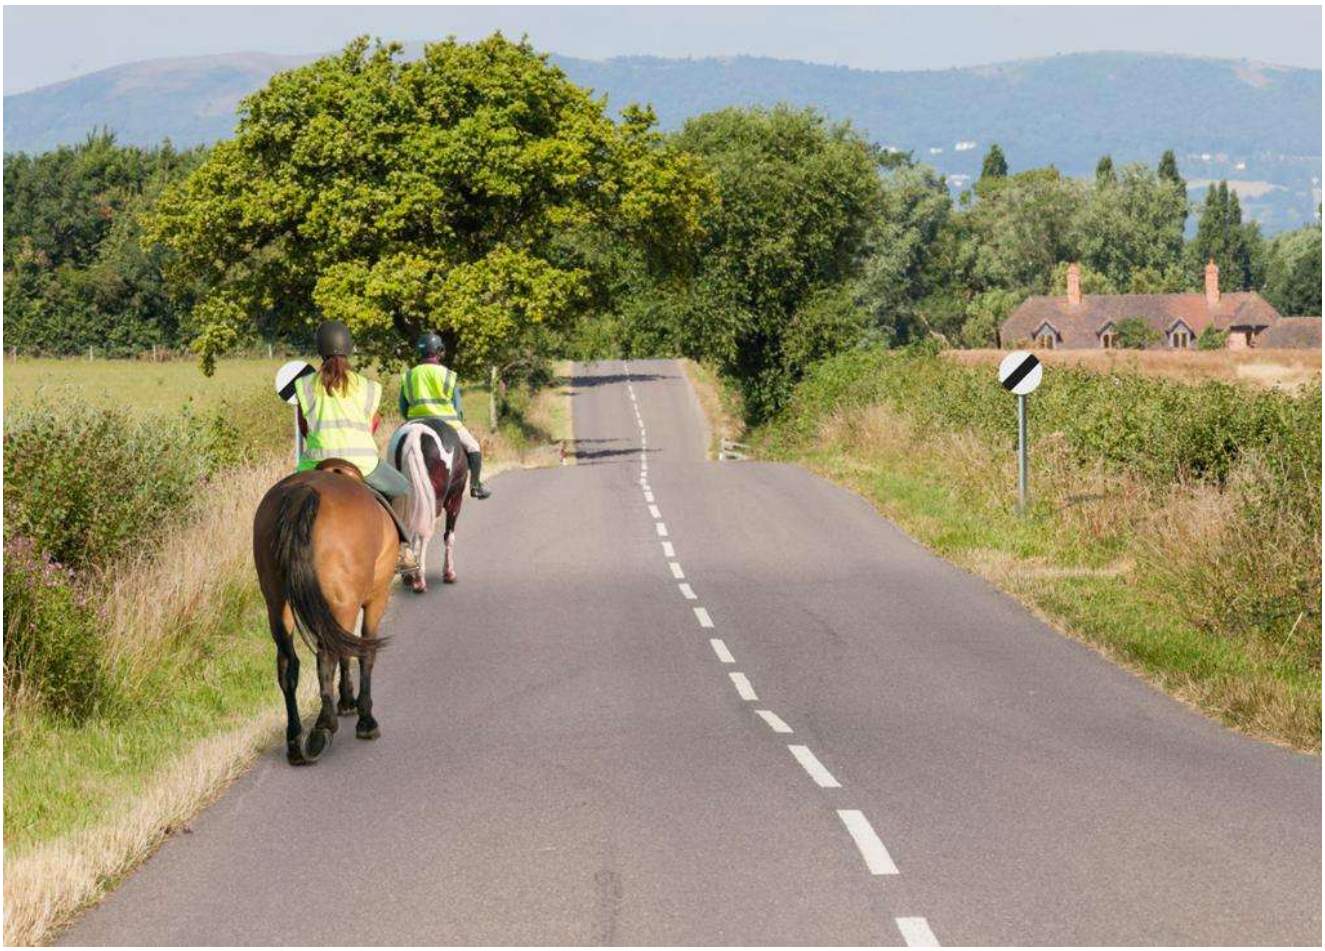

A. Contraflow cycle lane

B. With-flow cycle lane

C. Cycles and buses only

D. No cycles or buses

50. What should you do when you see these horse riders in front?

A. Switch on your hazard warning lights

B. Pull out to the middle of the road

C. Slow down and be ready to stop

D. Give a right-turn signal

51. What's the purpose of these road markings?

A. To enable teachers to have clear access to the school

B. To ensure children can see and be seen when they're crossing the road

C. To ensure delivery vehicles have easy access to the school

D. To enable parents to pick up or drop off children safely

52. What should you do if the left-hand pavement is closed due to street repairs?

A. Use your right-hand mirror more often

B. Speed up to get past the roadworks more quickly

C. Position close to the left-hand kerb

D. Watch out for pedestrians walking in the road

53. What should you do when you're following a motorcyclist along a road that has a poor surface?

A. Follow closely so they can see you in their mirrors

B. Allow extra room in case they swerve to avoid potholes

C. Allow the same room as normal to avoid wasting road space

D. Overtake immediately to avoid delays

54. What does this sign mean?

A. End of cycle route

B. Cycle parking only

C. Cycle route ahead

D. No cycling

55. You're approaching this roundabout. What should you do when a cyclist is keeping to the left while signalling to turn right?

A. Assume they're turning left

B. Allow them space to turn

C. Sound your horn

D. Overtake them

56. What should you do when you're approaching this crossing?

A. Continue unless the pedestrians step out

B. Speed up and pass by quickly

C. Stop and wave the pedestrians across

D. Prepare to slow down and stop

57. What does it mean if you see a pedestrian with a dog that has a yellow or burgundy coat?

A. The pedestrian is colour-blind

B. The pedestrian is a dog trainer

C. The pedestrian is an older person

D. The pedestrian is deaf

58. Who may use toucan crossings?

A. Motorcyclists and cyclists

B. Motorcyclists and pedestrians

C. Only cyclists

D. Cyclists and pedestrians

59. This junction, controlled by traffic lights, has a marked area between two stop lines. What's this for?

A. To allow taxis to position in front of other traffic

B. To allow cyclists to position in front of other traffic

C. To allow cyclists and pedestrians to cross the road together

D. To allow people with disabilities to cross the road

60. You're about to overtake a cyclist. Why should you leave them as much room as you would give to a car?

A. The cyclist might have to make a left turn

B. The cyclist might speed up

C. The cyclist might get off their bicycle

D. The cyclist might be unsettled if you pass too near them

61. What should you do when you're passing loose sheep on the road?

A. Briefly sound your horn

B. Herd them to the side of the road

C. Pass quickly but quietly

D. Go very slowly

62. At night, what does it mean if you see a pedestrian wearing reflective clothing and carrying a bright red light?

A. You're approaching a traffic danger spot

B. You're approaching a slow-moving vehicle

C. You're approaching an organised walk

D. You're approaching roadworks

63. You've just passed your driving test. How can you reduce your risk of being involved in a collision?

A. By always staying close to the vehicle in front

B. By never going over 40 mph

C. By staying in the left-hand lane on all roads

D. By taking further training

64. You're turning right from a main road into a side road. There's no oncoming traffic. What should you do if pedestrians are standing on the pavement waiting to cross the side road?

A. Wait and give way to the pedestrians

B. Turn in because the pedestrians are safe on the pavement

C. Sound your horn to alert the pedestrians to your presence

D. Wave at the pedestrians, inviting them to cross the road

65. You're travelling on a narrow section of road. What should you do if a horse rider ahead is riding in the centre of the lane?

A. Stay behind and allow them to ride in this position

B. Get up close behind to encourage them to move aside

C. Move across to the right and try to ease past them

D. Sound your horn to alert them to your presence

66. You’re about to overtake a cyclist on a road that has a 30 mph speed limit. How much room should you leave them as you overtake?

A. At least as much room as you would if you were overtaking a car

B. At least 2 car widths

C. At least a car’s length

D. At least a car’s width

67. You're turning left from a main road into a side road. What should you do if there’s a pedestrian on the pavement waiting to cross the side road?

A. Wait and give way to the pedestrian

B. Carry on turning into the side road

C. Sound your horn to let the pedestrian know you’re there

D. Flash your lights to encourage the pedestrian to cross

Answers

1. A - So your view ahead isn't obstructed

If you follow a large vehicle too closely, your view beyond it will be restricted. Drop back. This will help you to see more of the road ahead. It will also help the driver of the large vehicle to see you in their mirrors and will give you a safe separation distance if the lorry needs to stop suddenly.

2. A - Give them plenty of room

Try not to startle the animals. They can be easily frightened by noise or by traffic passing too closely. Slow down, give them plenty of room and be prepared to stop if necessary. Obey any directions given by people in charge of the animals.

3. D - Slow down and be ready to stop

You should always be looking for vehicles emerging from side roads as you approach them. If you see another vehicle begin to emerge into your path, be ready to slow down or stop if necessary.

4. B - Keep calm and be patient

Learner drivers might take longer to react to traffic situations, so be patient and give them time. Don’t unnerve them by riding close behind or showing signs of impatience.

5. D - Slow down gradually to increase the gap in front of you

By increasing the separation distance between you and the vehicle in front, you have a greater safety margin. If the vehicle in front of you brakes suddenly to avoid a hazard, you'll have time to reduce speed gradually. This will reduce the risk of the close-following vehicle running into you.

6. B - Be prepared to stop

As you would with any pedestrian, you should prepare to stop. Don’t wave the person across, as other traffic may not slow down.

7. D - The rider may be blown across in front of you

On a windy day, be aware that the blustery conditions might blow you or other motorcyclists out of position. Think about this before deciding to overtake.

8. A - Allow the person to finish crossing

At a pelican crossing, the green light means you may proceed as long as the crossing is clear. If someone hasn't finished crossing, be patient and wait until the road is clear.

9. A - At junctions

Other motorcyclists and cyclists may be difficult to see on the road, particularly at junctions. If your view is blocked by other traffic, you may not be able to see them approaching.

10. D - To check for any overtaking traffic

The lifesaver glance makes you aware of what's happening behind and alongside you before you alter your course. This glance must be timed so that you still have time to react if it isn’t safe to carry out your manoeuvre.

11. A - Revving your engine

When passing horses, allow them plenty of space and slow down. Animals can be frightened by sudden or loud noises, so don't sound your horn or rev your engine.

12. C - They lack experience and judgement

Young and inexperienced motorcyclists are far more likely to be involved in incidents than more experienced riders. The reasons for this include natural exuberance, showing off, competitive behaviour and overconfidence. Don’t overestimate your abilities and never ride too fast for the conditions.

13. D - They lack experience

Young and inexperienced motorcyclists often have more confidence than ability. It takes time to gain experience and become a good rider. Make sure you have the right attitude and put safety first.

14. A - You must not wait or park your motorcycle here

Parking here will block the view of the road, endangering the lives of children crossing the road on their way to and from school.

15. B -

Always check the road signs. Triangular signs are warning signs: they inform you about hazards ahead and help you to anticipate any problems. There are a number of different signs showing pedestrians. Learn the meaning of each one.

16. B - Give way to them

When you’re turning into a side road, pedestrians who are crossing have priority. You should wait to allow them to finish crossing safely. Be patient if they're slow or unsteady. Don't try to rush them by sounding your horn, flashing your lights, revving your engine or giving any other inappropriate signal.

17. A - Pedestrians

Make sure that you've reduced your speed and are in the correct gear for the turn. Look into the road before you turn and always give way to any pedestrians who are crossing.

18. B - They may be overtaking on your right

Never attempt to change direction to the right without first checking your right-hand mirror and blind spot. A motorcyclist might not have seen your signal and could be hidden by other traffic. This observation should become a matter of routine.

19. D - Pedestrians and cyclists can use it together

Puffin crossings are for use by pedestrians. Cyclists must dismount and push their bicycle over the crossing. Toucan crossings are shared by pedestrians and cyclists, who are permitted to cycle over the crossing. Toucan roadside signals show an icon of a pedestrian and a cyclist together.

20. C - By displaying a 'stop' sign

If a school crossing patrol steps out into the road with a 'stop' sign, you must stop. Don’t wave anyone across the road and don’t get impatient or rev your engine.

21. B - On the rear of a school bus or coach

Vehicles that are used to carry children to and from school will be travelling at busy times of the day. If you're following a vehicle with this sign, be prepared for it to make frequent stops. It might pick up or set down passengers in places other than normal bus stops.

22. C - A route for pedestrians and cyclists

This sign shows a shared route for pedestrians and cyclists: when it ends, the cyclists will be rejoining the main road.

23. A - They're deaf and blind

When someone is deaf as well as blind, they may carry a white stick with a red reflective band or bands. They may not be aware that you're approaching and they may not be able to hear anything; so, for example, your horn would be ineffective as a warning to them.

24. B - Be patient and allow them to cross in their own time

Be aware that older people might take a long time to cross the road. They might also be hard of hearing and not hear you approaching. Don’t hurry older people across the road by getting too close to them or revving your engine.

25. A - Be careful; they may misjudge your speed

Older people may have impaired hearing, vision, concentration and judgement. They may also walk slowly and so could take a long time to cross the road.

26. D - Give the cyclist plenty of room

If you’re following a cyclist who’s signalling to turn right at a roundabout, leave plenty of room. Give them space and time to get into the correct lane.

27. C - Bicycle

Don’t pass cyclists too closely, as they may • need to veer around a pothole, drain or other hazard • be buffeted by side wind • be made unsteady by your vehicle. Always leave as much room as you would for a car, and don’t cut in front of them.

28. C - They're harder to see

Cyclists and motorcyclists are smaller than other vehicles and so are more difficult to see. They can easily be hidden from your view by cars parked near a junction.

29. C - Motorcycles can easily be hidden behind obstructions

If you're waiting to emerge from a side road, look carefully for motorcycles: they can be difficult to see. Be especially careful if there are parked vehicles or other obstructions restricting your view.

30. B - So that the rider can be seen more easily

A motorcycle can be lost from sight behind another vehicle. The use of headlights helps to make it more conspicuous and therefore more easily seen.

31. A - To make them more visible

Motorcycles and scooters are generally smaller than other vehicles and can be difficult to see. Wearing bright clothing makes it easier for other road users to see a motorcyclist approaching, especially at junctions.

32. D - To check for traffic in their blind area

When you see a motorcyclist take a glance over their shoulder, they're probably about to change direction. Recognising a clue like this helps you to anticipate their next action. This can improve road safety for you and others.

33. A - Motorcyclist

Pedestrians and riders on two wheels can be harder to see than other road users. Make sure you look for them, especially at junctions. Effective observation, coupled with appropriate action, can save lives.

34. B - Give them plenty of room

Horse riders often keep to the outside of the roundabout even if they're turning right. Give them plenty of room and remember that they may have to cross lanes of traffic.

35. C - Wait patiently while they cross

If the lights turn to green, wait for any pedestrians to clear the crossing. Allow them to finish crossing the road in their own time, and don’t try to hurry them by revving your engine.

36. B - Reduce speed until you're clear of the area

The flashing amber lights are switched on to warn you that children may be crossing near a school. Slow down and take extra care, as you may have to stop.

37. C - To allow children to see and be seen when they're crossing the road

The markings are there to show that the area should be kept clear. This is to allow an unrestricted view for • approaching drivers and riders • children wanting to cross the road.

38. A - On a school bus

School buses can stop to pick up or drop off schoolchildren at places that aren't designated bus stops. Watch out for children crossing the road to catch the bus or from the far side of the bus if they've just been dropped off.

39. A - Any direction

Cyclists approaching a roundabout in the left-hand lane may be turning right but may not have been able to get into the correct lane due to heavy traffic. They may also feel safer keeping to the left all the way around the roundabout. Be aware of them and give them plenty of room.

40. D - Stay behind until the moped has passed the junction

Passing the moped and turning into the junction could mean that you cut across the front of the rider. This might force them to slow down, stop or even lose control. Stay behind the moped until it has passed the junction and then you can turn without affecting the rider.

41. D - Stay well back

Allow the horse rider to enter and exit the roundabout in their own time. They may feel safer keeping to the left all the way around the roundabout. Don’t get up close behind or alongside them, because that would probably upset the horse and create a dangerous situation.

42. B - Be patient and prepare for them to react more slowly

Learners might not have confidence when they first start to drive. Allow them plenty of room and don’t react adversely to their hesitation. We all learn from experience, but new drivers will have had less practice in dealing with all the situations that might occur.

43. A - Be patient, as you expect them to make mistakes

Learning to drive is a process of practice and experience. Try to understand this and tolerate those who make mistakes while they're learning.

44. C - Pedestrians

On a quiet country road, always be aware that there may be a hazard just around the next bend, such as a slow-moving vehicle or pedestrians. Pedestrians are advised to walk on the right-hand side of the road if there's no pavement, so they may be walking towards you on your side of the road.

45. A - Hold back until the cyclist has passed the junction

Make allowances for cyclists, and give them plenty of room. Don’t overtake and then immediately turn left. Be patient and turn behind them when they've passed the junction.

46. C - In any direction

Horses and their riders move more slowly than other road users. They might not have time to cut across heavy traffic to take up a position in the right-hand lane. For this reason, a horse and rider may approach a roundabout in the left-hand lane even though they're turning right.

47. D - Flashing amber beacon

Powered vehicles used by disabled people are small and low making them hard to see on the road. They also travel very slowly. On an unrestricted dual carriageway, they must display a flashing amber beacon to warn other road users of their presence.

48. A - The vehicle is slow moving

Different coloured beacons warn of different types of vehicle needing special attention. Blue beacons are used on emergency vehicles that need priority. Green beacons are found on doctors' cars. Amber beacons generally denote slower moving vehicles, which are often large. These vehicles are usually involved in road maintenance or local amenities and make frequent stops.

49. B - With-flow cycle lane

Usually, a picture of a cycle will also be painted on the road, and sometimes the lane will have a different coloured surface. Leave these areas clear for cyclists and don't pass too closely when you overtake.

50. C - Slow down and be ready to stop

Be particularly careful when approaching horse riders – slow down and be prepared to stop. Always pass wide and slowly, and look out for signals given by the riders. Horses are unpredictable: always treat them as potential hazards and take great care when passing them.

51. B - To ensure children can see and be seen when they're crossing the road

These markings are found on the road outside schools. Don't stop or park on them, even to set down or pick up children. The markings are there to ensure that drivers, riders, children and other pedestrians have a clear view of the road in all directions.

52. D - Watch out for pedestrians walking in the road

Where street repairs have closed off pavements, proceed carefully and slowly, as pedestrians might have to walk in the road.

53. B - Allow extra room in case they swerve to avoid potholes

To avoid being unbalanced, a motorcyclist might swerve to avoid potholes and bumps in the road. Be prepared for this and allow them extra space.

54. C - Cycle route ahead

More people are cycling today and cycle routes are being extended in our towns and cities to provide safe cycling routes. Respect the presence of cyclists on the road and give them plenty of room if you need to pass.

55. B - Allow them space to turn

Cycling in today’s heavy traffic can be hazardous. Some cyclists may not feel safe crossing the path of traffic to take up a position in an outside lane. Be aware of this and understand that, although they're in the left-hand lane, the cyclist might be turning right.

56. D - Prepare to slow down and stop

Be courteous and prepare to stop. Don't wave people across, because this could be dangerous if another vehicle is approaching the crossing.

57. D - The pedestrian is deaf

Dogs trained to help deaf people have a yellow or burgundy coat. If you see one, you should take extra care, as the pedestrian may not be aware of vehicles approaching.

58. D - Cyclists and pedestrians

There are some crossings where cycle routes lead cyclists to cross at the same place as pedestrians. Always look out for cyclists, as they're likely to be approaching faster than pedestrians.

59. B - To allow cyclists to position in front of other traffic

These are known as advanced stop lines. When the lights are red (or about to become red), you should stop at the first white line. However, if you've crossed that line as the lights change, you must stop at the second line even if it means you're in the area reserved for cyclists.

60. D - The cyclist might be unsettled if you pass too near them

Before overtaking, assess the situation. Look well ahead to see whether the cyclist will need to change direction. Be especially aware of a cyclist approaching parked vehicles, as they'll need to alter course. Don't pass too closely or cut in sharply as this could unsettle the rider.

61. D - Go very slowly

Slow down and be ready to stop if you see animals in the road ahead. Animals are easily frightened by noise and vehicles passing too close to them. Stop if you're signalled to do so by the person in charge.

62. C - You're approaching an organised walk

The people on the walk should be keeping to the left, but don’t assume this. Pass carefully, making sure you have time to do so safely. Be aware that the pedestrians have their backs to you and may not know that you’re there.

63. D - By taking further training

New drivers and riders are often involved in a collision or incident early in their driving career. Due to a lack of experience, they may not react to hazards appropriately. Approved training courses are offered by driver and rider training schools for people who have passed their test but want extra training.

64. A - Wait and give way to the pedestrians

You should give way to pedestrians crossing or waiting to cross the road into which or from which you're turning. Be patient if they're cautious and take their time checking that it’s safe before they step into the road.

65. A - Stay behind and allow them to ride in this position

On narrow sections of road, horse riders may ride in the centre of the lane. This is for their own safety as it makes them more visible. You should be patient and only pass when it’s safe to do so.

66. A - At least as much room as you would if you were overtaking a car

You should leave cyclists at least as much room as you would if you were overtaking a car. Leave them more room if you’re overtaking at speeds over 30 mph.

67. A - Wait and give way to the pedestrian

You should give way to pedestrians crossing or waiting to cross the road into which or from which you're turning. Be patient if they’re cautious, and let them check that it’s safe from all directions before they step into the road. Do not signal or wave them to cross.
