1. What’s likely to happen if you get cold and wet when you're riding a motorcycle?

A. Your concentration will be impaired

B. Your reactions will be quicker

C. Your visor will freeze up

D. Your riding will improve

2. Which arm signal means 'I intend to slow down or stop'?

A.

B.

C.

D.

3. What should you do if you're about to ride home, but you can't find the glasses you need to wear?

A. Ride home slowly, keeping to quiet roads

B. Find a way of getting home without riding

C. Ride home at night, so that the lights will help you

D. Borrow a friend’s glasses and use those

4. What is a known effect of drinking alcohol?

A. Colour blindness

B. Increased concentration

C. Poor judgement

D. Faster reactions

5. When must you wear your glasses if you need them to read vehicle number plates at the required distance?

A. At all times when riding

B. Only in bad light or at night time

C. Only when you think it's necessary

D. Only in bad weather conditions

6. How are you likely to be affected by drinking alcohol?

A. The speed of your reactions will increase

B. You'll be more cautious and perceptive

C. Your judgement of speed will be worse

D. Your awareness of danger will improve

7. Which type of glasses shouldn't be worn when riding at night?

A. Tinted

B. Bifocal

C. Round

D. Half-moon

8. When may you use your motorcycle's hazard warning lights?

A. When you're riding in town, to warn oncoming traffic that you intend to stop

B. When your direction indicators aren't working

C. When you're riding on a motorway, to warn traffic behind of a hazard ahead

D. When you’re double parked on a two-way road

9. Why should you wear ear plugs when you're riding a motorcycle?

A. To help prevent hearing damage

B. To make you less aware of traffic

C. To help keep you warm

D. To make your helmet fit better

10. You're going to a social event and alcohol will be available. What's the safest thing to do if you'll be riding your motorcycle shortly afterwards?

A. Stay just below the legal limit

B. Have soft drinks and alcohol in turn

C. Stick to non-alcoholic drinks

D. Don’t go beyond the legal limit

11. How could your insurance be affected if you're convicted of riding after drinking too much alcohol?

A. The amount of excess you pay will be reduced

B. Cover will only be given for riding smaller motorcycles

C. You'll only be able to get third-party cover

D. Your insurance may become invalid

12. Why should you check over your shoulder before turning right into a side road?

A. To make sure the side road is clear

B. To confirm your intention to turn

C. To check for overtaking vehicles

D. To check for emerging traffic

13. What should you do if you aren't sure whether your cough medicine will affect your ability to ride safely?

A. Don't take the medicine

B. Ask your doctor

C. Ride if you feel all right

D. Ask a friend or relative for advice

14. When should you use hazard warning lights?

A. When your direction indicators aren't working

B. When warning oncoming traffic that you intend to stop

C. When your motorcycle has broken down and is causing an obstruction

D. When you're double-parked on a two-way road

15. What hazard would you expect if you ride on a very hot day?

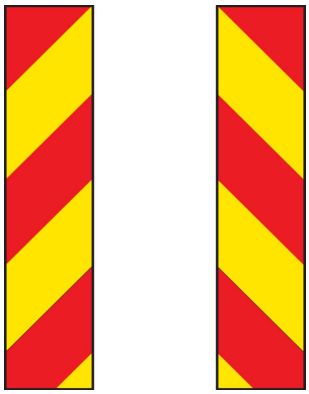

A. Brake fade

B. Queuing traffic

C. A soft road surface

D. Mud on the road

16. Where would you expect to see these markers?

A. On a railway bridge

B. On a large goods vehicle

C. On a diversion sign

D. On a motorway sign

17. What's the main hazard shown in this picture?

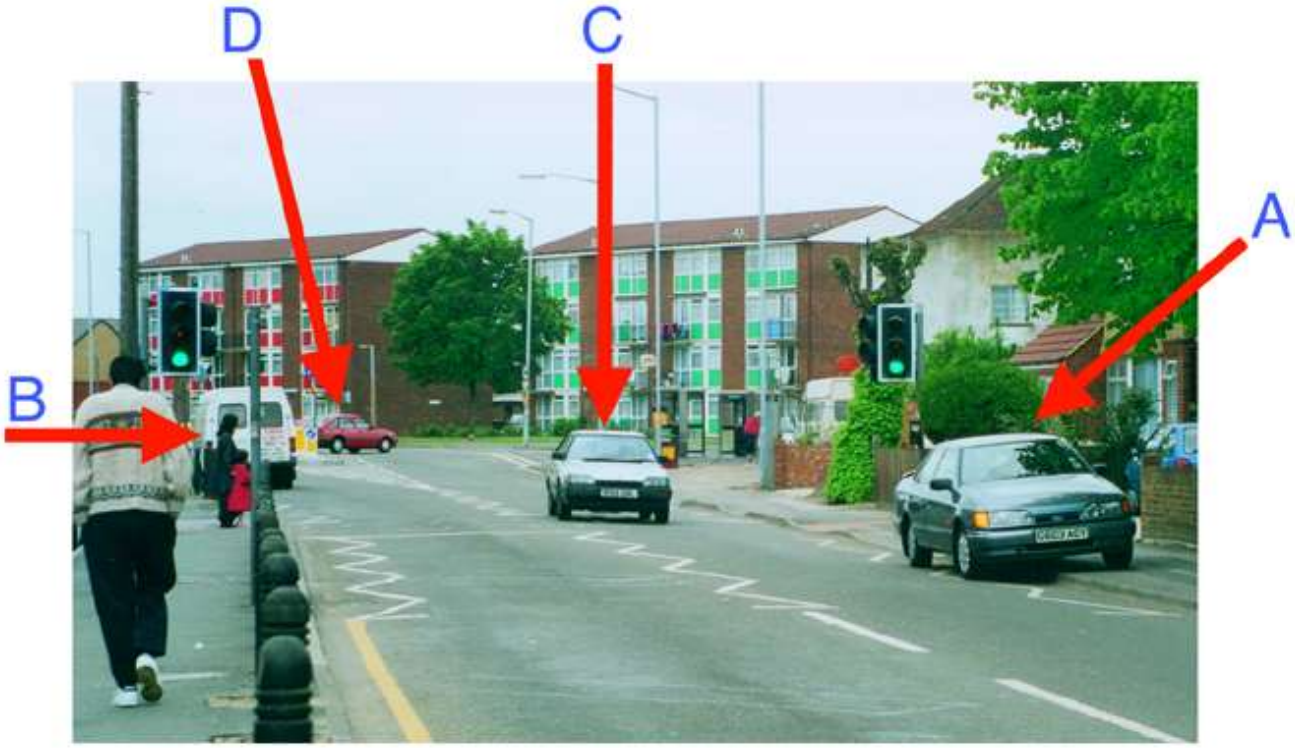

A. Vehicles turning right

B. Vehicles doing U-turns

C. The cyclist crossing the road

D. Parked cars around the corner

18. Which road user has caused a hazard?

A. The parked car (arrowed A)

B. The pedestrian waiting to cross (arrowed B)

C. The car turning (arrowed D)

D. The moving car (arrowed C)

19. What should the driver of the car approaching the crossing do?

A. Sound the horn

B. Slow down and get ready to stop

C. Drive through quickly

D. Continue at the same speed

20. What should the driver of the grey car be especially aware of?

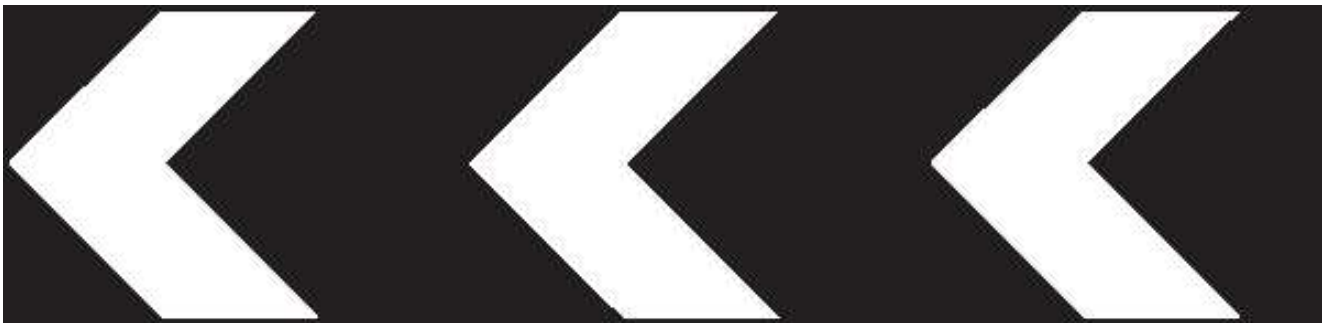

A. Empty parking spaces

B. The uneven road surface

C. Traffic following behind

D. Doors opening on parked cars

21. What should you expect if you see this sign ahead?

A. The road will bend sharply to the left

B. The road will go steeply uphill

C. The road will go steeply downhill

D. The road will bend sharply to the right

22. What should you do as you approach this cyclist?

A. Try to overtake before the cyclist gets to the junction

B. Rev your engine so the cyclist knows you're following behind

C. Slow down and allow the cyclist to turn

D. Flash your headlights at the cyclist

23. Why must you take great care when emerging from this junction?

A. The road surface is poor

B. The view is restricted

C. The kerbs are high

D. The footpath is narrow

24. Which type of vehicle should you be ready to give way to as you approach this bridge?

A. Bicycles

B. Cars

C. Motorcycles

D. Buses

25. What type of vehicle could you expect to meet in the middle of the road?

A. Bicycle

B. Motorcycle

C. Car

D. Lorry

26. What must you do at this junction?

A. Stop only if there's traffic on the main road

B. Stop behind the line, then edge forward to see clearly

C. Stop beyond the line, at a point where you can see clearly

D. Stop only if you're turning right

27. What should you do if a driver pulls out of a side road in front of you, causing you to brake hard?

A. Overtake as soon as possible

B. Sound your horn to show your annoyance

C. Flash your lights to show your annoyance

D. Ignore the error and stay calm

28. Why should you make allowances for older drivers?

A. Older drivers can only drive cars that have automatic gearboxes

B. Older drivers are exempt from wearing seat belts

C. Older drivers reactions may be slower than other drivers

D. Older drivers take more risks than other drivers

29. Do you need to plan rest stops when you’re planning a long journey?

A. Yes, you should plan to stop every half an hour

B. Yes, regular stops help concentration

C. No, you’ll be less tired if you get there as soon as possible

D. No, only fuel stops will be needed

30. What should you do if the red lights start flashing as you approach a level crossing?

A. Go over it quickly

B. Go over it carefully

C. Switch on your hazard warning lights

D. Stop before the barrier

31. You're approaching a crossroads. What should you do if the traffic lights have failed?

A. Brake sharply to a stop before looking

B. Be prepared to stop for any traffic

C. Be prepared to brake sharply to a stop

D. Brake and stop only for large vehicles

32. What should the driver of the red car (arrowed) do?

A. Wave towards the pedestrians who are waiting to cross

B. Tell the pedestrian in the road she shouldn't have crossed

C. Quickly drive behind the pedestrian in the road

D. Wait for the pedestrian in the road to cross

33. You're following a slower-moving vehicle. What should you do if there's a junction just ahead on the right?

A. Accelerate quickly to overtake before reaching the junction

B. Overtake after checking your mirrors and signalling

C. Only consider overtaking when you're past the junction

D. Slow down and prepare to overtake on the left

34. What should you do as you approach this overhead bridge?

A. Find another route; this one is only for high vehicles

B. Be prepared to give way to large vehicles in the middle of the road

C. Move across to the right-hand side before going through

D. Move out to the centre of the road before going through

35. Why are vehicle mirrors often slightly curved (convex)?

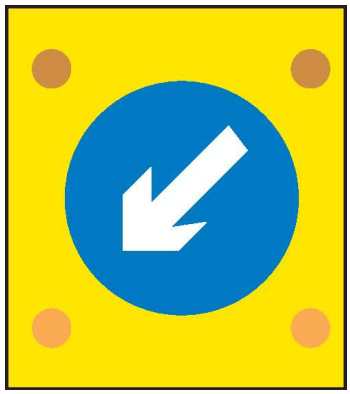

A. They make the traffic behind look bigger

B. They make it easier to judge the speed of the traffic behind

C. They totally cover blind spots

D. They give a wider field of vision

36. You're on a three-lane motorway. How should you overtake a slow-moving lorry in the middle lane if it's showing this sign?

A. Follow the lorry until you can leave the motorway

B. Use the right-hand lane and overtake the lorry normally

C. Approach with care and overtake on the left of the lorry

D. Cautiously approach the lorry, then overtake on either side

37. What should you do if you think the driver of the vehicle in front has forgotten to cancel their right indicator?

A. Flash your lights to alert the driver

B. Sound your horn before overtaking

C. Overtake on the left if there's room

D. Stay behind and don't overtake

38. What's the main hazard the driver of the red car (arrowed) should be aware of?

A. Glare from the sun may affect the driver's vision

B. The black car may stop suddenly

C. Oncoming vehicles will assume the driver is turning right

D. The bus may move out into the road

39. What type of vehicle displays this yellow sign?

A. A school bus

B. A private ambulance

C. An ice-cream van

D. A broken-down vehicle

40. What hazard should you be aware of when travelling along this street?

A. Large goods vehicles

B. Glare from the sun

C. Lack of road markings

D. Children running out between vehicles

41. What's the main hazard you should be aware of when following this cyclist?

A. The cyclist may swerve into the road

B. The cyclist may wish to turn right at the end of the road

C. The cyclist may get off and push their bicycle

D. The cyclist may move to the left and dismount

42. A driver’s behaviour has upset you. How can you get over this incident safely?

A. Stop and take a break

B. Follow them, flashing your headlights

C. Gesture to them with your hand

D. Shout abusive language

43. How should you drive or ride in areas with traffic-calming measures?

A. At a reduced speed

B. With headlights on dipped beam

C. In the centre of the road

D. At the speed limit

44. Why should you slow down as you approach this hazard?

A. Because of the level crossing

B. Because of animals crossing

C. Because of approaching traffic

D. Because it's hard to see to the right

45. Why are place names painted on the road surface?

A. To restrict the flow of traffic

B. To prevent you from changing lanes

C. To help you select the correct lane in good time

D. To warn of oncoming traffic

46. Some two-way roads are divided into three lanes. Why are they particularly dangerous?

A. Traffic in both directions can use the middle lane to overtake

B. Traffic can travel faster in poor weather conditions

C. Traffic can overtake on the left

D. Traffic uses the middle lane for emergencies only

47. What type of vehicle uses an amber flashing beacon on a dual carriageway?

A. A doctor on call

B. An ambulance

C. A tractor

D. A fire engine

48. What does this signal from a police officer mean to oncoming traffic?

A. Go ahead

B. Turn right

C. Turn left

D. Stop

49. Why should you be cautious when going past this bus waiting at a bus stop?

A. There's a zebra crossing ahead

B. The road surface will be slippery

C. People may cross the road in front of it

D. There are driveways on the left

50. Where would it be unsafe to overtake?

A. On a one-way street

B. Travelling up a long hill

C. Approaching a junction

D. On a single carriageway

51. How can drinking alcohol affect your ability to drive or ride?

A. Your confidence will be reduced

B. Your awareness of danger will be improved

C. Your reactions will be faster

D. Your ability to judge speed will be reduced

Answers

1. A - Your concentration will be impaired

When riding, make sure you wear suitable clothing for the conditions. Getting cold and wet will make you uncomfortable. This can cause you to lose concentration and considerably slow down your reaction time. Stop in a safe place to have a hot drink and warm up before this happens.

2. B -

Give your signal in good time and return your hand to the handlebars before changing speed or direction. While you're giving an arm signal you have reduced steering control and you're unable to operate some controls. If you're travelling at speed, it's generally safer to rely on your direction indicators and brake lights.

3. B - Find a way of getting home without riding

If you need glasses to bring your eyesight up to the legal standard for driving or riding, you must wear them whenever you ride. Don’t be tempted to ride if you’ve lost or forgotten your glasses; you'll endanger yourself and other road users, and you’ll be breaking the law.

4. C - Poor judgement

Even a small amount of alcohol will impair a person’s judgement. It can increase confidence to a point where a person’s behaviour may become ‘out of character’. Someone who normally behaves sensibly may take risks and could endanger themselves and others. Don’t drink and ride, or accept a lift from anyone who’s been drinking.

5. A - At all times when riding

Have your eyesight tested before you start your practical training. Then have checks periodically throughout your riding life, as your vision may change.

6. C - Your judgement of speed will be worse

Never drink if you're going to drive or ride. Your judgement can be seriously affected, even if you aren't over the drink-drive limit. Don't take risks; it isn't worth it.

7. A - Tinted

If you're riding at night or in poor visibility, tinted lenses or a tinted visor will reduce the amount of available light reaching your eyes, making you less able to see clearly.

8. C - When you're riding on a motorway, to warn traffic behind of a hazard ahead

Hazard warning lights are an important safety feature. Use them when you're riding on a motorway to warn following traffic of danger ahead. You should also use them if your motorcycle has broken down and is causing an obstruction.

9. A - To help prevent hearing damage

The use of ear plugs is recommended to protect your hearing from being damaged by the noise of air turbulence around your helmet. Staying within the national speed limit, a rider may experience noise levels in excess of 100 decibels.

10. C - Stick to non-alcoholic drinks

Drinking even the smallest amount of alcohol can affect your judgement and reactions. The safest and best option is to avoid any alcohol at all when you know you'll be riding or driving afterwards.

11. D - Your insurance may become invalid

Riding while under the influence of drink or drugs can invalidate your insurance. It also endangers yourself and others. The risk isn't worth taking.

12. C - To check for overtaking vehicles

Take a check over your shoulder before committing yourself to a manoeuvre. This is especially important when turning right, as other road users may not have seen your signal or may not understand your intentions.

13. B - Ask your doctor

If you’re taking medicine or drugs prescribed by your doctor, check to make sure they won’t make you drowsy. If you forget to ask when you’re at the surgery, check with your pharmacist.

14. C - When your motorcycle has broken down and is causing an obstruction

Hazard warning lights are an important safety feature and should be used if you've broken down and are causing an obstruction. Don't use them as an excuse to park illegally, even for a short time. You may also use them on motorways to warn following traffic of danger ahead.

15. C - A soft road surface

In very hot weather, the road surface can become soft and may melt. Take care when braking and cornering on soft tarmac, as this can lead to reduced grip and cause skidding.

16. B - On a large goods vehicle

These markers must be fitted to vehicles over 13 metres long, heavy goods vehicles, and rubbish skips placed in the road. They're reflective to make them easier to see in the dark.

17. C - The cyclist crossing the road

Look at the picture carefully and try to imagine you're there. The cyclist in this picture appears to be trying to cross the road. You must be able to deal with the unexpected, especially when you're approaching a hazardous junction. Look well ahead to give yourself time to deal with any hazards.

18. A - The parked car (arrowed A)

The car arrowed A is parked within the area marked by zigzag lines at the pedestrian crossing. Parking here is illegal. It also • blocks the view for pedestrians wishing to cross the road • restricts the view of the crossing for approaching traffic.

19. B - Slow down and get ready to stop

Look well ahead to see whether any hazards are developing. This will give you more time to deal with them in the correct way. The man in the picture is clearly intending to cross the road. You should be travelling at a speed that allows you to check your mirror, slow down and stop in good time. You shouldn't have to brake harshly.

20. D - Doors opening on parked cars

When passing parked cars, there's a risk that a driver or passenger may not check before opening the door into the road. A defensive driver will drive slowly and be looking for people who may be about to get out of their car.

21. A - The road will bend sharply to the left

This sign indicates that the road will bend sharply to the left. Slow down in plenty of time and select the correct gear before you start to turn. Braking hard and late, while also sharply changing direction, is likely to cause a skid.

22. C - Slow down and allow the cyclist to turn

Keep well back and give the cyclist time and room to turn safely. Don’t intimidate them by getting too close or trying to squeeze past.

23. B - The view is restricted

You may have to pull forward slowly until you can see up and down the road. Be aware that the traffic approaching the junction can’t see you either. If you don’t know that it’s clear, don’t go.

24. D - Buses

A bus or high-sided lorry will have to take a position in the centre of the road to clear the bridge. There's normally a sign to show this. Look well ahead, past the bridge and be ready to stop and give way to large oncoming vehicles.

25. D - Lorry

The highest point of the bridge is in the centre, so a large vehicle might have to move to the centre of the road to have enough room to pass safely under the bridge.

26. B - Stop behind the line, then edge forward to see clearly

The ‘stop’ sign has been put here because the view into the main road is poor. You must stop because it won't be possible to take proper observation while you're moving.

27. D - Ignore the error and stay calm

Be tolerant if a vehicle emerges and you have to brake quickly. Anyone can make a mistake, so don’t react aggressively. Be alert where there are side roads and be especially careful where there are parked vehicles, because these can make it difficult for emerging drivers to see you.

28. C - Older drivers reactions may be slower than other drivers

As people age, their reaction time gets slower. The rate of decline varies from person to person but you can expect them to take longer to react to a hazard and they may be hesitant in some situations – for example, at a junction.

29. B - Yes, regular stops help concentration

Try to plan your journey so that you can take rest stops. It’s recommended that you take a break of at least 15 minutes after every two hours of driving or riding. This should help to maintain your concentration.

30. D - Stop before the barrier

At level crossings, the red lights flash before and while the barrier is down. At most crossings, an amber light will precede the red lights. You must stop behind the white line unless you've already crossed it when the amber light comes on. Don't be tempted to zigzag around half-barriers.

31. B - Be prepared to stop for any traffic

When approaching a junction where the traffic lights have failed, you should proceed with caution. Treat the situation as an unmarked junction and be prepared to stop.

32. D - Wait for the pedestrian in the road to cross

Some people might take a long time to cross the road. They may be older or have a disability. Be patient and don't hurry them by showing your impatience. If pedestrians are standing at the side of the road, don't signal or wave them to cross. Other road users might not have seen your signal and this could lead the pedestrians into a hazardous situation.

33. C - Only consider overtaking when you're past the junction

You should never overtake as you approach a junction. If a vehicle emerged from the junction while you were overtaking, a dangerous situation could develop very quickly.

34. B - Be prepared to give way to large vehicles in the middle of the road

Oncoming large vehicles may need to move to the middle of the road to pass safely under the bridge. There won't be enough room for you to continue, so you should be ready to stop and wait.

35. D - They give a wider field of vision

Although a convex mirror gives a wide view of the scene behind, you should be aware that it won't show you everything behind or to the side of your vehicle. Before you move off, you'll need to look over your shoulder to check for anything not visible in the mirrors.

36. C - Approach with care and overtake on the left of the lorry

This sign is found on slow-moving or stationary works vehicles. If you wish to overtake it, do so on the left, as indicated. Be aware that there might be people working in the area.

37. D - Stay behind and don't overtake

Be cautious and don’t attempt to overtake. The driver may be unsure of the location of a junction and may turn suddenly.

38. D - The bus may move out into the road

If you can do so safely, give way to buses signalling to move off at bus stops. Try to anticipate the actions of other road users around you. The driver of the red car should be prepared for the bus pulling out. As you approach a bus stop, look to see how many passengers are waiting to board. If the last one has just got on, the bus is likely to move off.

39. A - A school bus

Buses which carry children to and from school may stop at places other than scheduled bus stops. Be aware that they might pull over at any time to allow children to get on or off. This will normally be when traffic is heavy during rush hour.

40. D - Children running out between vehicles

On roads where there are many parked vehicles, you might not be able to see children between parked cars and they may run out into the road without looking.

41. A - The cyclist may swerve into the road

When following a cyclist, be aware that they have to deal with the hazards around them. They may wobble or swerve to avoid a pothole in the road or see a potential hazard and change direction suddenly. Don’t follow them too closely or rev your engine impatiently.

42. A - Stop and take a break

If you feel yourself becoming tense or upset, stop in a safe place and take a break. Tiredness can make things worse and may cause a different reaction to upsetting situations.

43. A - At a reduced speed

Traffic-calming measures such as road humps, chicanes and narrowings are intended to slow traffic down to protect vulnerable road users. Don't speed up until you reach the end of the traffic-calmed zone.

44. A - Because of the level crossing

You should be slowing down and selecting the correct gear in case you have to stop at the level crossing. Look for the signals and be prepared to stop if necessary.

45. C - To help you select the correct lane in good time

The names of towns and cities may be painted on the road at busy junctions and complex road systems. They guide you into the correct lane in good time, allowing traffic to flow more freely.

46. A - Traffic in both directions can use the middle lane to overtake

If you intend to overtake, you must consider that approaching traffic could be planning the same manoeuvre. When you've considered the situation and decided it's safe, indicate your intentions early. This will show the approaching traffic that you intend to pull out.

47. C - A tractor

An amber flashing beacon on a vehicle indicates that it's moving slowly or stopped and a possible hazard. Look well ahead on a dual carriageway and you should be able to see and respond to these vehicles in good time.

48. D - Stop

Police officers may need to direct traffic; for example, at a junction where the traffic lights have broken down. Check your copy of The Highway Code for the signals that they use.

49. C - People may cross the road in front of it

A bus at a bus stop can hide pedestrians who might try to cross the road just in front of it. Drive at a speed that will enable you to respond safely if you have to.

50. C - Approaching a junction

You should overtake only when it's really necessary and you can see it’s clear ahead. Look out for road signs and markings that show it's illegal or would be unsafe to overtake; for example, approaching junctions or bends. In many cases, overtaking is unlikely to significantly improve your journey time.

51. D - Your ability to judge speed will be reduced

Alcohol will severely reduce your ability to drive or ride safely and there are serious consequences if you’re caught over the drink-drive limit. It's known that alcohol can • affect your judgement • cause overconfidence • reduce coordination and control.
