1. What must you do when the amber light is flashing at a pelican crossing?

A. Stop and wait for the green light

B. Give way to pedestrians already on the crossing

C. Give way to pedestrians waiting to cross

D. Stop and wait for the red light

2. Why should you never wave people across at pedestrian crossings?

A. They may not be looking

B. They may not be ready to cross

C. It's safer for you to carry on

D. Another vehicle may be coming

3. Why is it dangerous to travel too close to the vehicle ahead?

A. Your mirrors will need adjusting

B. Your sat nav will be confused

C. Your view of the road ahead will be restricted

D. Your engine will overheat

4. What will happen if you follow this vehicle too closely?

A. Your fuel consumption will be increased

B. Your view ahead will be reduced

C. Your engine will overheat

D. Your brakes will overheat

5. What's the minimum time gap you should leave when following a vehicle on a wet road?

A. Two seconds

B. Four seconds

C. Three seconds

D. One second

6. You're being overtaken by a long, heavily laden lorry. What should you do if it's taking a long time for it to overtake?

A. Slow down

B. Change direction

C. Hold your speed

D. Speed up

7. Which vehicle will use a blue flashing beacon?

A. Bomb disposal

B. Breakdown recovery

C. Snow plough

D. Motorway maintenance

8. What should you do if you're being followed by an ambulance showing flashing blue lights?

A. Accelerate hard to get away from it

B. Brake harshly and stop well out into the road

C. Maintain your speed and course

D. Pull over as soon as it's safe to do so

9. What type of emergency vehicle is fitted with a green flashing beacon?

A. Road gritter

B. Doctor's car

C. Ambulance

D. Fire engine

10. Who should obey diamond-shaped traffic signs?

A. Bus drivers

B. Taxi drivers

C. Lorry drivers

D. Tram drivers

11. On a road where trams operate, which vehicles will be most at risk from the tram rails?

A. Cars

B. Lorries

C. Buses

D. Cycles

12. When should you use your vehicle's horn?

A. To signal your annoyance

B. To allow you right of way

C. To alert others to your presence

D. To greet other road users

13. You're in a one-way street and want to turn right. Where should you position your vehicle when there are two lanes?

A. Just left of the centre line

B. In either lane, depending on the traffic

C. In the left-hand lane

D. In the right-hand lane

14. You wish to turn right ahead. Why should you take up the correct position in good time?

A. To allow drivers to pass you on the right

B. To help other road users know what you intend to do

C. To give a better view into the road that you're joining

D. To allow other drivers to pull out in front of you

15. Which type of crossing allows cyclists to ride across with pedestrians?

A. Zebra

B. Pelican

C. Puffin

D. Toucan

16. You're travelling at the legal speed limit. What should you do if the vehicle behind approaches quickly, flashing its headlights?

A. Allow the vehicle to overtake

B. Maintain your speed to prevent the vehicle from overtaking

C. Touch the brakes sharply to show your brake lights

D. Accelerate to make a gap behind you

17. When should you flash your headlights at other road users?

A. When showing that you're giving way

B. When letting them know that you're there

C. When telling them that you have right of way

D. When showing that you're about to turn

18. You're approaching an unmarked crossroads. How should you deal with the junction?

A. Accelerate and look to the left

B. Slow down and keep to the right

C. Accelerate and keep to the middle

D. Slow down and look both ways

19. The conditions are good and dry. When should you use the 'two-second rule'?

A. When traffic lights change to green

B. Before using the 'Mirrors - Signal - Manoeuvre' routine

C. When checking your gap from the vehicle in front

D. Before restarting the engine after it has stalled

20. Which colour follows the green signal at a puffin crossing?

A. Flashing green

B. Steady amber

C. Flashing amber

D. Steady red

21. You're in a line of traffic. What action should you take if the driver behind is following very closely?

A. Move over to a position just left of the centre line of the road

B. Signal left and wave the driver behind to come past

C. Slow down, gradually increasing the gap between you and the vehicle in front

D. Ignore the driver behind and continue to travel within the speed limit

22. You're travelling along a single-track road. There's a passing place on your right. What should you do if you see a vehicle coming towards you?

A. Wait opposite the passing place

B. Move over onto the verge

C. Stop in the passing place

D. Continue along the single-track road

23. You're driving on a clear night. Which lights should you use if the national speed limit applies and there's a steady stream of oncoming traffic?

A. Full-beam headlights

B. Sidelights

C. Dipped headlights

D. Fog lights

24. You're driving behind a heavy goods vehicle. What should you do if it signals left but steers to the right?

A. Slow down and let the vehicle turn

B. Hold your speed and sound your horn

C. Overtake on the right of it

D. Drive on, keeping to the left

25. You're driving along this road. What should you do if the red car cuts in close in front of you?

A. Drop back to leave the correct separation distance

B. Accelerate to get closer to the red car

C. Flash your headlights several times

D. Give a long blast on the horn

26. You're waiting in a traffic queue at night. How can you avoid dazzling drivers behind you?

A. Use the parking brake and release the footbrake

B. Use the parking brake and footbrake together

C. Balance the clutch with the accelerator

D. Keep your foot on the footbrake

27. You're driving in traffic at the speed limit for the road. What should you do if the driver behind is trying to overtake?

A. Wave the driver behind to overtake when it's safe

B. Move closer to the car ahead, so the driver behind has no room to overtake

C. Accelerate to get away from the driver behind

D. Keep a steady course and allow the driver behind to overtake

28. What does it mean if the signs at a bus lane show no times of operation?

A. The lane is in operation 24 hours a day

B. The lane isn't in operation

C. The lane is only in operation at peak times

D. The lane is only in operation in daylight hours

29. What should you do when a person herding sheep asks you to stop?

A. Try to get past quickly

B. Ignore them as they have no authority

C. Stop and switch off your engine

D. Continue on but drive slowly

30. What should you do when you're overtaking a horse and rider?

A. Go past slowly and carefully

B. Sound your horn as a warning

C. Go past as quickly as possible

D. Flash your headlights as a warning

31. You're approaching a zebra crossing. What should you do if pedestrians are waiting to cross?

A. Give way to older and infirm people only

B. Wave at them to cross the road

C. Use your headlights to indicate they can cross

D. Slow down and prepare to stop

32. What should you do if a vehicle pulls out in front of you at a junction?

A. Accelerate past it immediately

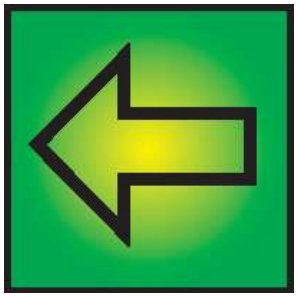

B. Swerve past it and sound your horn

C. Flash your headlights and drive up close behind

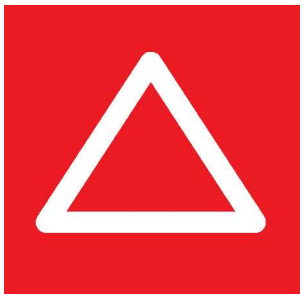

D. Slow down and be ready to stop

33. Which instrument-panel warning light would show that headlights are on main beam?

A.

B.

C.

D.

34. When should you leave a two-second gap between your vehicle and the one in front?

A. When it's raining

B. When it's foggy

C. When it's icy

D. When it's dry

35. You're driving at night on an unlit road. What should you do if you're following another vehicle?

A. Flash your headlights

B. Use full-beam headlights

C. Switch off your headlights

D. Use dipped headlights

36. What should you do if you're driving a slow-moving vehicle on a narrow winding road?

A. Give a left signal when it's safe for vehicles to overtake you

B. Keep well out to stop vehicles overtaking dangerously

C. Wave the vehicles behind to come past you if you think they can overtake quickly

D. Pull in when you can, to let the vehicles behind overtake

37. You're driving a car that has a diesel engine. What can a loose filler cap on your fuel tank cause?

A. It can increase the level of exhaust emissions

B. It can make the engine difficult to start

C. It can make the roads slippery for other road users

D. It can improve your vehicle’s fuel consumption

38. What should you do to avoid fuel spillage?

A. Check that your filler cap is securely fastened

B. Check that your tank is only three-quarters full

C. Check that you've used a locking filler cap

D. Check that your fuel gauge is working

39. What style of driving causes increased risk to everyone?

A. Responsible

B. Considerate

C. Defensive

D. Competitive

Answers

1. B - Give way to pedestrians already on the crossing

Pelican crossings are signal-controlled crossings operated by pedestrians. Push-button controls change the signals. Pelican crossings have no red-and-amber stage before green; instead, they have a flashing amber light. This means you must give way to pedestrians who are on the crossing but if the crossing is clear you can continue.

2. D - Another vehicle may be coming

If people are waiting to use a pedestrian crossing, slow down and be prepared to stop. Don't wave them across the road, because another driver may not have seen them, may not have seen your signal, and may not be able to stop safely.

3. C - Your view of the road ahead will be restricted

‘Tailgating’ is the term used when a driver or rider follows the vehicle in front too closely. It's dangerous because it restricts your view of the road ahead and leaves no safety margin if the vehicle in front needs to slow down or stop suddenly. Tailgating is often the underlying cause of rear-end collisions or multiple pile-ups.

4. B - Your view ahead will be reduced

Staying back will increase your view of the road ahead. This will help you to see any hazards that might occur and give you more time to react.

5. B - Four seconds

Water will reduce your tyres' grip on the road. The safe separation gap of at least two seconds in dry conditions should be doubled, to at least four seconds, in wet weather.

6. A - Slow down

A long lorry with a heavy load will need more time to pass you than a car, especially on an uphill stretch of road. Slow down and allow the lorry to pass.

7. A - Bomb disposal

Emergency vehicles use blue flashing lights. If you see or hear one, move out of its way as soon as it's safe and legal to do so.

8. D - Pull over as soon as it's safe to do so

Pull over in a place where the ambulance can pass safely. Check that there are no bollards or obstructions in the road that will prevent it from passing.

9. B - Doctor's car

A green flashing beacon on a vehicle means the driver or passenger is a doctor on an emergency call. Give way to them if it's safe to do so. Be aware that the vehicle may be travelling quickly or may stop in a hurry.

10. D - Tram drivers

These signs apply only to tram drivers, but you should know their meaning so that you're aware of the priorities and are able to anticipate the actions of the driver.

11. D - Cycles

The narrow wheels of a bicycle can become stuck in the tram rails, causing the cyclist to stop suddenly, wobble or even lose balance altogether. The tramlines are also slippery, which could cause a cyclist to slide or fall off.

12. C - To alert others to your presence

You mustn't use your vehicle's horn between 11.30 pm and 7 am in a built-up area or when you're stationary, unless a moving vehicle poses a danger. Its function is to alert other road users to your presence.

13. D - In the right-hand lane

When you’re in a one-way street and want to turn right, you should take up a position in the right-hand lane. This will allow other road users, not wishing to turn, to pass on the left. Indicate your intention and take up the correct position in good time.

14. B - To help other road users know what you intend to do

If you wish to turn right into a side road, take up your position in good time. Move to the centre of the road when it's safe to do so. This will allow vehicles to pass you on the left. Early planning will show other traffic what you intend to do.

15. D - Toucan

A toucan crossing is designed to allow pedestrians and cyclists to cross at the same time. Look out for cyclists approaching the crossing at speed.

16. A - Allow the vehicle to overtake

Don’t enforce the speed limit by blocking another vehicle’s progress. This will only cause frustration. Allow the other vehicle to pass when you can do so safely.

17. B - When letting them know that you're there

You should only flash your headlights to warn others of your presence. Don't use them to greet others, show impatience or give priority to other road users, because they could misunderstand your signal.

18. D - Slow down and look both ways

Be cautious, especially when your view is restricted by hedges, bushes, walls, large vehicles, etc. In the summer months, these junctions can become more difficult to deal with, because growing foliage may further obscure your view.

19. C - When checking your gap from the vehicle in front

In good conditions, the 'two-second rule' can be used to check the distance between your vehicle and the one in front. This technique works on roads carrying faster traffic. Choose a fixed object, such as a bridge, sign or tree. When the vehicle ahead passes this object, say to yourself 'Only a fool breaks the two-second rule.' If you reach the object before you finish saying this, you're too close.

20. B - Steady amber

Puffin crossings have infra-red sensors that detect when pedestrians are crossing and hold the red traffic signal until the crossing is clear. The use of a sensor means there's no flashing amber phase as there is with a pelican crossing.

21. C - Slow down, gradually increasing the gap between you and the vehicle in front

If the driver behind is following too closely, there’s a danger they’ll collide with the back of your vehicle if you stop suddenly. You can reduce this risk by slowing down and increasing the safety margin in front of you. This reduces the chance that you’ll have to stop suddenly and allows you to spread your braking over a greater distance. This is an example of defensive driving.

22. A - Wait opposite the passing place

When you meet oncoming vehicles on a single-track road, you should allow them to pass. You should pull into a passing place on your left or wait opposite a passing place on your right. Do not move onto the verge as there may be hidden hazards.

23. C - Dipped headlights

Use the full-beam headlights only when you can be sure that you won’t dazzle other road users.

24. A - Slow down and let the vehicle turn

Large, long vehicles need extra room when making turns at junctions. They may move out to the right in order to make a left turn. Keep well back and don't attempt to pass them on their left.

25. A - Drop back to leave the correct separation distance

There are times when other drivers make incorrect or ill-judged decisions. Be tolerant and try not to retaliate or react aggressively. Always consider the safety of other road users, your passengers and yourself.

26. A - Use the parking brake and release the footbrake

In queuing traffic, your brake lights can dazzle drivers behind you. If you apply your parking brake, you can take your foot off the footbrake. This will turn off the brake lights so that they can't dazzle the driver behind you.

27. D - Keep a steady course and allow the driver behind to overtake

Keep a steady course to give the driver behind an opportunity to overtake safely. If necessary, slow down. Reacting incorrectly to another driver's impatience can lead to danger.

28. A - The lane is in operation 24 hours a day

Bus-lane signs show the vehicles allowed to use the lane and its times of operation. Where no times are shown, the bus lane is in operation 24 hours a day.

29. C - Stop and switch off your engine

If someone in charge of animals asks you to stop, you should do so and switch off your engine. Animals are unpredictable and startle easily; they could turn and run into your path or into the path of another moving vehicle.

30. A - Go past slowly and carefully

Horses can be startled by the sound of a car engine or the rush of air caused by a vehicle passing too closely. Keep well back and only pass when it's safe. Leave them plenty of room; you may have to use the other side of the road to go past safely.

31. D - Slow down and prepare to stop

As you approach a zebra crossing, look for pedestrians waiting to cross. Where you can see them, slow down and prepare to stop. Be especially careful of children and older people, who may have difficulty judging when it's safe to cross.

32. D - Slow down and be ready to stop

Try to anticipate what other drivers might do. Look and plan ahead so that you're ready to respond safely if a hazard develops. Be tolerant of road users who make mistakes.

33. D -

You should be aware of all the warning lights and visual aids on the vehicle you're driving. If you're driving a vehicle for the first time, you should familiarise yourself with all the controls, warning lights and visual aids before you set off.

34. D - When it's dry

In good, dry conditions, a driver needs to keep a distance of at least two seconds from the car in front. This should allow enough space for you to stop if the driver in front has to stop suddenly.

35. D - Use dipped headlights

If you follow another vehicle with your headlights on full beam, they could dazzle the driver. Leave a safe distance and make sure that the light from your dipped beam falls short of the vehicle in front.

36. D - Pull in when you can, to let the vehicles behind overtake

If you’re driving a slow-moving vehicle along a narrow road, try not to hold up faster traffic. If you see vehicles following behind, pull over in a safe place and let the traffic pass before continuing. Don't wave other traffic past – this could be dangerous if you or they haven’t noticed a hazard ahead.

37. C - It can make the roads slippery for other road users

Diesel fuel can spill out if your filler cap isn't secured properly. This is most likely to occur on bends, junctions and roundabouts, where it will make the road slippery, especially if it's wet. At the end of a spell of dry weather, road surfaces may be especially slippery where diesel has been spilled but it hasn’t been washed away by rain.

38. A - Check that your filler cap is securely fastened

When learning to drive, it's a good idea to practise filling your car with fuel. Ask your instructor if you can use a petrol station and fill the fuel tank yourself. You need to know where the filler cap is on the car you're driving, so you know which side of the pump to park at. Take care not to overfill the tank and make sure you secure the filler cap correctly, so that no fuel leaks onto the road while you're driving.

39. D - Competitive

Competitive driving increases the risks to everyone and is the opposite of responsible, considerate and defensive driving. Defensive driving is about questioning the actions of other road users and being prepared for the unexpected. Don't be taken by surprise.
